Oh, for the great Democratic Party, the party of Thomas Jefferson, the party of individual enterprise, the party whose cornerstone was that the most sacred thing in the world was the individual and individual enterprise, the party which believed that government was organized solely for the purpose of preventing depredations by one individual upon another and that all that was necessary for government to do was to see to it that every man had a fair field and equal opportunity. * * * (Hon. JOHN SHARP WILLIAMS, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 2175.)

SENATOR VARDAMAN (DEMOCRAT), OF MISSISSIPPI, DISAGREES WITH HIS DEMOCRATIC COLLEAGUE (SENATOR WILLIAMS) AND SAYS THE POPULIST CREED HAS BECOME THE POLITICAL FAITH OF THE NATION.

In fact, Mr. President, the Populist creed, which has been so much criticized, that platform of principles which they proclaimed at Omaha, has been appropriated by the Democrats and stolen by the Progressives. Really the creed of that much despised and criticized political minority has now become, to a very large extent, the political faith of the Nation. (Hon. J. K. VARDAMAN, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 2234.)

CONGRESSMAN KINDEL (DEMOCRAT), OF COLORADO, THINKS PRESIDENT WILSON AN AUTHORITY ON SYNTAX AND ETYMOLOGY, BUT IS IGNORANT OF THE SCIENCE OF TRANSPORTATION—HE WOULD SEND THE "BLUNDERING" POSTMASTER GENERAL TO TEXAS "TO PUNCH COWS."

While our Postmaster General takes great credit upon himself, I must say that I can not agree with the distinguished chairman of the Post Office and Post Roads Committee, who thinks that Mr. Burleson is the best man on earth. He may be that, but certainly he has not demonstrated to me that he is the wisest in conducting the parcel post.

* * * * * * *

I have taken the matter up with several Cabinet officers and the honored President himself, and while I have a great regard for the President, who is unquestionably an authority on syntax and etymology, he admittedly knows little or nothing about the science of transportation.

This is not the first time I have made known the inconsistencies and injustices to the powers that be. Besides this being my fourth speech on the subject I have talked almost daily to the various heads and subheads for the past nine months. Some changes have followed, but not one of them in a logical or scientific way.

Until the President realizes his mistake and sends the blundering Postmaster General Burleson and Chairman Clark, of the Interstate Commerce Commission, one of them to punch cows in Texas and one to punch railroad tickets in Iowa, we can not hope for any improvement. (Hon. GEORGE J. KINDEL, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 2508, 2510.)

---

* * * *The President has stated that he does not feel at liberty to take a position where the Democratic platform has not taken a position, but he has not stated that he did feel at liberty to repudiate the Democratic platform where it has taken a position.* (Republican Leader JAMES R. MANN, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 3344.)

THE BALTIMORE PLATFORM.

I was once a joyous platform, in Baltimore I was made;
The people laughed and hollered and the bands all came and played.
My planks were joined so neatly that the carpenters declared
'Twas a case of clear perfection, and they'd lick the man who dared
Insinuate that I was anything but stanch and good,
And now there's not enough of me for campaign kindling wood.
Where are now those vocal efforts and those sentiments sublime,
Those tunes played gladly out of key and mostly out of time?
Gone into deep oblivion, laid high upon the shelf,
Dear, patriotic speeches, you're back numbers like myself.
They said they made me strong enough to cope with any fate,
And yet I proved as fragile as a chunk of armor plate.
To patriotic fires I'd give some splinters, if I could,
But now there's not enough of me for campaign kindling wood.

Why the Man Who Works is Poor; or, Plain Graft Exposed.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

Mr. LAFFERTY. Mr. Speaker, in one respect I occupy a unique position in this House. I have not the support of a single daily newspaper anywhere. I have neither the support nor the indorsement of any party. For three years anyone feeling that he needed a little leg exercise, especially if he lived in my district, has taken a kick at me.

THANKS HOUSE FOR KIND TREATMENT.

Yet this House has treated me kindly, has passed 32 of my bills in three and one-half years—more than it has passed for any other Oregon Member—and it has acted favorably on three great measures, two of which I was the first Member ever to propose in Congress, to wit, the eight-hour law for women in the District of Columbia and the bill to take over the street railway system of Washington as a Government utility. The third bill in which I took a very active part, and which the House passed, was the parcel post.

CORPORATIONS SAY I AM "UNFIT."

Recently a corporation lawyer of Portland, Richard W. Montague, of Wood, Montague & Hunt, made a speech at a ladies' pink tea at the home of Mrs. Thomas G. Greene, 337 Jessup Street, which speech was printed in the Journal of October 3, and in that speech Mr. Montague told the ladies that since my election to Congress my conduct had been such that no self-respecting man or woman could vote for me for reelection. Mr. Montague lives in a precinct on Kings Heights, which precinct at the late primary gave me only 5 votes to 50 votes for McArthur, so Mr. Montague doubtless voices the sentiment of his high-brow neighbors, who are all corporation people and bankers. But he made the speech in question in East Portland, which went for me in the late primary and where I carried one precinct 20 to 1 against McArthur. I have no fears that the sensible people of East Portland are going to be influenced by pink-tea speeches delivered by this "Romeo" Montague, imported from Kings Heights.

FOR MEN WITH THE OVERALLS.

I stand for the man who wears the overalls. He is the man who has built everything in this world, on land and sea, except what was given to us by Almighty God. The balance of us, if willing to serve the special interests as lawyers, doctors, ministers, and editors, may go through life in ease and comfort, supported, fed, clothed, and cared for by the man in the overalls.

The houses in which we live, the streets upon which we walk, the trains in which we ride, the automobiles in which some of us ride, the steaks and chickens which some of us eat, the ships in which we sail, the temples in which judges hold their courts—and issue injunctions against labor unions—the palaces in which millionaires and high officials reside, the great marble buildings with gold domes in which laws are made, and the cannon with which battles were fought, all come from the man who wears the overalls. That man, of all others, should be honored and respected. That man, of all others, should receive sufficient salary to raise his family with dignity and with comfort.

The great majority work, but the few get the benefits of labor. Oh, yes; they say I am a demagogue. Is any man a demagogue who tells the truth? Is any public official a demogogue who keeps his word. If so, then I am a demagogue.

When I first ran for Congress I said I would stand for specific laws, which I named, to give the people who work a greater share of their product—an absolutely fair share of it. The question most frequently asked me in that campaign was, "Will you stand after election where you stand now?" I said I would, and I have kept the faith. Because I have done so, Mr. Montague says that my conduct since my election has been such that no self-respecting man or woman can vote for me for reelection. He evidently means that no selfish man or woman, who has only his or her private graft in mind, should vote for me.

POWERFUL INFLUENCES BROUGHT TO BEAR.

All the newspapers turning against me and all the "high brows" turning against me has had one decided effect. It has burned the bridges between me and them, and henceforth and forever my entire energies are devoted without qualification, evasion, or exception to the cause of the man with the overalls.

Every grafting special interest in the country makes its influence felt on Members of Congress, Senators, and the President. The power of the press is more potent than any other weapon they have. When I first came here my heart was in the right place, just as it is now, but I would have hesitated long then to antagonize the Oregonian or the Saturday Evening Post lest my political career be cut short by the power of those great publications. But the newspapers assaulted me under the belief that they could retire me to oblivion, and now there is a breach between me and them that can never be bridged over. I am now free to say what I think and to tell the people the whole truth about the newspapers. Every special-privilege corporation and banker in Portland and all whom they can influence are fighting me, and I am free to tell the whole truth about them. I shall now detail some of the graft that goes to make up the high cost of living to the average honest citizen.

BURDENS FROM GRAFT.

Recently we put a new burden on the people by passing the war-tax bill to raise $100,000,000 of revenue. We are giving away nearly that much yearly to the Oregonian, the Journal, the Saturday Evening Post, and the other great papers going to make up the "press."

I have in my hand a letter from the Postmaster General, written this month, saying that for the last fiscal year, ending June 30, 1914, the Oregonian sent through the mails at the 1-cent a pound rate nearly 1,000,000 pounds of papers, the Journal nearly 900,000 pounds, and the Saturday Evening Post over 37,000,000 pounds, and I also hold in my hand the report of the a pound to transport these papers. Therefore we donated last year to the Oregonian $70,000, to the Journal $63,000, and to the Saturday Evening Post $2,590,000. On former occasions I have used figures from the National One-Cent Letter League, of Cleveland, stating that the subsidy to the Saturday Evening Post was $4,000,000 a year, but the figures I now have are official, just received within the last week from the Post Office Department. Heretofore I have estimated upon information furnished by the papers themselves that the Journal and Oregonian received a combined subsidy of $48,000 a year, but the official figures show that they receive a subsidy of $133,000 a year.

REMEDY DEMANDED.

If we would compel all newspapers and magazines to pay cost of transporting their papers, we would not need the "war tax," or if we would apply the saving to the reduction of first-class postage we would have 1-cent letter postage at once. The Oregonian is making a quarter of a million a year. It could well afford to pay the actual cost of transporting its papers, which is all I ask.

The poor people of Portland are now donating to the Oregonian in mail subsidy the enormous sum of $70,000, to the Journal almost as much, and yet those papers refuse to stand by the poor people, but represent the special-privilege corporations, and them alone. How long, I wonder, will the people stand it. Certainly not one minute after a majority of them know the facts.

BANKING GRAFT.

The high-brow bankers of Portland all vote against me and with the Oregonian and the Journal. They have good cause to do so. I am against the banking graft just the same as I am against the newspaper graft. The First National Bank of Portland has "deposits" of $7,804,492, and it has "lawful money" on hand of only $1,727,818, and yet it has loaned out the enormous sum of $7,782,999. This from page 622 of the 1913 report of the Comptroller of the Currency. The bank is merely an agency into which John Jones deposits $1,000 and from which William Smith borrows the same $1,000. The bank charges 8 per cent. If it pays the depositor 4 per cent, it still makes 4 per cent on the transaction. So that on the $7,000,000 and more which the people of Oregon have deposited in the First National, the First National is making yearly a profit of 4 per cent, or $280,000. So it will appear that the banking graft is almost as good as the newspaper graft. The truth is that H. L. Pittock, the shrewd native of England, owner of the Oregonian, and a born exploiter of the people, has recently gone into the banking business also, and he is now president of the Northwestern National. He was not the boy to stand by and see Mr. Ainsworth and Mr. Mills get all the banking graft. The banking business is a legitimate business, if squarely conducted, the same as is the newspaper business, but for heaven's sake leave a little for the people who do the work.

QUICK RELIEF AVAILABLE.

Why does not the Government extend the functions of the postal savings banks? The answer is that it would interfere with the graft of the banks. Now, you can only put $500 all told in a postal savings bank, and not more than $100 in any one month, so it would take you five months to get your $500 deposited. The Government pays you 2 per cent if you leave your money a full year, otherwise nothing. The Government immediately redeposits your money in the local banks at 2½ per cent, and the local banks loan it out at 8 per cent. Why not enlarge the power of the postal savings banks, let them take all the money they can get, and then let the Government loan it to the farmers at 3 or 4 per cent? The answer is it would hurt the banking graft. One bank in New York has deposits of the people's money of over $100,000,000, and the same is true of a bank in Chicago. The interest on that at 4 per cent is $400,000 a year to each bank. Look at the millions that could be saved to the people yearly if the Government would enlarge the postal savings banks and take from private corporations some of the profits of banking. Money is naturally a Government monopoly, and the profits from this monopoly should not all go to private banks.

GRAFT OF PUBLIC UTILITIES.

The graft of the railroads, street car systems, telephones, telegraphs, electric light and gas systems, has been specifically pointed out in former speeches by me. The Portland Railway Light & Power Co. is a fair example. Its gross receipts for 1913, according to Moody's Manual, were $6,723,742; total expenses and taxes, $3,298,319; net profits—over 50 per cent—$3,424,423. So that the profits of this one monopoly amounted to more than $12 per person in Portland, or more than $48 per family. No wonder that a monopoly that is collecting $12 in velvet from each man, woman, and child in Portland yearly is opposed to me, and no wonder one of its corporation lawyers thinks that no self-respecting man or woman could vote for me.

WILL YOU STAND FOR IT?

I am wondering if the people are going to be fooled again by the special-privilege corporations, or will they show that they are really worthy to be American citizens; that they are really free and independent, and not bounden slaves for all the long future.

The interests nominated Mr. McArthur in the late primaries, whom they expect to be elected and to serve them in Congress. A certain Mr. Flegel, for whom the aforesaid corporation lawyer, Montague, was speaking on the occasion mentioned, is also running, as is one Moulton, who formerly worked in my office and who is expected to get the votes of some of my friends.

MOULTON AND FLEGEL OPPOSE GOVERNMENT OWNERSHIP.

Both Moulton and Flegel stand with McArthur in opposing Government ownership. Flegel is the same stripe of conservative as McArthur, and received indorsements, along with McArthur, for nomination at the primaries by the "Voters' Protective League," a sort of A. P. A. organization, and by the "Nonpartisan League," an adjunct of the employers' association. Flegel was a standpatter in the city council and he is a standpatter now. He admits himself that he opposed woman suffrage until after the amendment was adopted—this at the Lincoln High School in May, 1914.

MOULTON AN INGRATE.

Arthur I. Moulton is worse than a standpatter. He is the basest ingrate that ever asked for public office at the hands of Multnomah County. Moulton is only 27 years of age and was formerly a clerk in my office. He came to Portland from Walla Walla, Wash., in January, 1908, to work for me at $75 a month. Instead, I voluntarily paid him $100 a month from the start, and he worked for me until September, 1909—nearly two years. In that period he was admitted to the bar. In that period he was married. In that period he became acquainted with my business and my clients. When I was elected to Congress in 1910 Moulton inherited nearly all of my business. Moulton enthusiastically supported me for Congress in 1910. He was even more enthusiastic in his support in 1912, going all over

Multnomah County with A. C. Marsters, E. E. Jones, and others, making lauditory speeches in my behalf. Moulton was himself a candidate for Republican nomination for the State legislature in 1910 and was properly gloriously defeated. Now Moulton thinks he ought to be Congressman in my place.

MOULTON'S PLATFORM STOLEN.

Every plank in Moulton's platform is stolen bodily from my platform, except that of prohibition, and if Moulton were sincere in his protestations he would be out supporting me now, as he did two and four years ago. Let him state what has happened within the last two years to transform me from a gentleman worthy of his enthusiastic support to one deserving of his cowardly and insinuating abuse. Let him give one specific incident, except the fact that the swell-headed Moulton, 27 years old, my former clerk, who has been made what he is by me, wants the office himself. The answer is that Moulton is merely one of the many ingrates with which this country is filled. He should and will be rebuked.

Analysis of the Clayton Antitrust Law.

EXTENSION OF REMARKS

OF

HON. LOUIS FITZHENRY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914,

On the conference report on the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. FITZHENRY. Mr. Speaker, this was a great measure when it passed the House as originally reported from the Committee on the Judiciary. Upon an extended consideration in the Senate numerous amendments have been made. When the bill came back to this House from the Senate with the latter's amendments, we voted to disagree to the Senate amendments and asked for a conference.

After many weeks of patient and conscientious labor the conferees of the House and Senate have reached an agreement and joined in a report to their respective Houses. The Senate has already concurred in the report of the conferees and the House is now about to do likewise.

No matter what the future may bring to me, I will never cease being proud of the part I have taken, humble as it may be, in the preparation of this law, as a member of the Committee on the Judiciary, and in procuring its final enactment into law.

In a few days it is my firm belief President Wilson will affix his signature to it as a measure which marks the performance of another great platform pledge of the Democratic Party.

Promises which have been liberally made by other political parties regularly with each succeeding national convention have been broken with as much regularity as they were made.

PRIVATE MONOPOLY, COMPETITION, OR SOCIALISM?

As a Government, there are three well-marked economic policies, any one of which we may pursue: (1) That which permits the control of business by private monopoly; (2) that which provides for competitive business; (3) public monopoly, or State socialism.

The first economic policy has been enforced in this country with governmental aid to such an extent that it almost endangered the stability of our free institutions. Our high protective-tariff system has shut out foreign competition while big business has been permitted to annihilate domestic competition to such an extent as to intrench itself as a private monopoly. This system has been effectually repudiated by the American people. We were formerly told that the American market was a great thing for Americans; that if a foreigner wished to enjoy the benefits of the American home market he should pay for it—this upon the foolish theory that the foreigner paid the tariff tax. The people, however, have learned that a prohibitive tariff simply prevented foreign competition, and by actual experience they have learned that the competition in the domestic market has been fettered and destroyed by certain practices leading up to private monopoly; that the consumer not only always pays the tariff tax, but also the tribute to privilege.

As to the third economic policy, I am one of those who believe that the American people are not yet ready to adopt a policy of public monopoly, or State socialism. There are, however, many able writers and thinkers upon this subject who contend that we are now ready and that we should immediately take on socialism.

The American people will never make the radical change of fiscal policies from private monopoly of commerce to that of public monopoly without giving the second policy, which I have just mentioned—that of competitive commercialism—a fair trial.

UNDERWOOD LAW PROMOTES COMPETITION.

The passage of the Underwood revenue law, which became effective October 3, 1913, is a decided step in the direction of competitive commercialism. In fact, that great measure, while a revenue law, was written with the idea of encouraging competition. The beneficial effect of the great Underwood tariff law could not be fully enjoyed by the people generally unless the antimonopoly laws of this country were either rewritten or supplemented so as to make them effective.

The law now upon our statute books—the Sherman antitrust law—has to a certain extent proved ineffectual for several reasons. Among them are these: (1) It made no provision for preventing and punishing the dangerous practices leading up to private monopoly. It gave the injured business man, whose efforts and energies were devoted to acquiring business and serving patrons through efficiency and merit, no relief from the crushing competition of the inefficient and criminal trusts. (2) Prosecutions under the Sherman antitrust law could not be commenced and prosecuted except "under the direction of the Attorney General." The best the most diligent Attorney General of the United States could do in the enforcement of the great Sherman antitrust law was to "scratch around the edges." It has made relief questionable as well as extremely expensive. No ready remedies were provided.

The Clayton anti-trust law, when signed by President Wilson, provides the American people with ample remedies for their speedy relief.

ANALYSIS OF THE PROVISIONS OF THIS BILL.

The first section of this bill is devoted to definitions, making the object and scope of the law plain and unmistakable.

The second section strikes at the practice of discriminating in price between different purchasers of the same commodity with intent to restrain trade and promote monopolies.

Section 3 treats with what is known as "tying contracts," such as are made by the Shoe Machinery Co. whereby it controls its products after sale so that if a purchaser operating a shoe factory refuses to buy all of his supplies, repair parts, and other machinery from this one concern the purchaser can be completely put out of business, as it were, by the withdrawal of all the machinery from the factory by the trust.

Section 4 permits any person injured in his business by anything forbidden by the antitrust laws to sue and recover threefold damages in any district court of the United States.

Section 5 gives to a person injured by the unlawful practices of trusts and combinations in restraint of trade the benefit of a final judgment or decree, as well as the evidence used by the Government to procure the judgment or decree, thus saving the litigant the enormous expense as well as the delay incident to collecting it.

HUMAN LABOR NOT A COMMODITY.

Section 6 is the great "magna charta" to the toiling masses of this country, permitting individuals to organize for all lawful purposes, and announcing the principle that "the labor of a human being is not a commodity or article of commerce." If there was any one issue decided more conclusively than all others in the great conflict of 1861 to 1865 it was that the labor of a human being from that time henceforth should not be a commodity nor an article of commerce in this country. Yet great trusts and combinations, with the assistance of some of the judges of our Federal courts, have made some progress along the line of establishing a system of law by precedents which recognizes that the labor of a human being is a commodity or an article of commerce. This law will forever settle that question.

My district, which is not a large one, at this late day, almost 50 years after the historic scene at Appomattox, contains about 1,400 gallant old veterans, many of whom bear the scars of battle and all of whom now show the ravages of years, who went to the front gladly to lay down their lives to vindicate the doctrine that the labor of a human being should not be a commodity. It is gratifying even at this late day to be able to reassure them that the sacrifices which they made and the suffering which they and their comrades endured in the great conflict have not been in vain.

No; the labor of a human being is not a commodity or an article of commerce, and hereafter nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations instituted for the purposes of mutual help and not having capital stock or conducted for profit, or to forbid or restrain indi-

vidual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

Section 7 deals with holding companies and prohibits their organization and operation for the purpose of lessening competition or restraining it in any one section to the detriment of the people and business of that section, and strikes at a well-known practice by which competition has been destroyed.

INTERLOCKING CORPORATE DIRECTORIES.

Section 8 deals with the general subject of interlocking directorates, and was written in response to the great message of President Wilson delivered before Congress on June 20, 1914, in which he said:

We are all agreed that "private monopoly is indefensible and intolerable," and our program is founded upon that conviction. It will be a comprehensive but not a radical or unacceptable program, and these are its items, the changes which opinion deliberately sanctions and for which business waits:

It waits with acquiescence, in the first place, for laws which will effectually prohibit and prevent such interlockings of the personnel of the directorates of great corporations—banks and railroads, industrial, commercial, and public-service bodies—as in effect result in making those who borrow and those who lend practically one and the same, those who sell and those who buy but the same persons trading with one another under different names and in different combinations, and those who affect to compete in fact partners and masters of some whole field of business. Sufficient time should be allowed, of course, in which to effect these changes of organization without inconvenience or confusion.

Such a prohibition will work much more than a mere negative good by correcting the serious evils which have arisen because, for example, the men who have been the directing spirits of the great investment banks have usurped the place which belongs to independent industrial management working in its own behoof. It will bring new men, new energies, a new spirit of initiative, new blood, into the management of our great business enterprises. It will open the field of industrial development and origination to scores of men who have been obliged to serve when their abilities entitled them to direct. It will immensely hearten the young men coming on and will greatly enrich the business activities of the whole country.

This section deals with some of the remarkable conditions brought to light by the Money Trust investigations of the House of Representatives, which established the fact that a few bankers in New York City controlled, through the medium of interlocking corporate directories, all of the important banks in the money centers of the country. These banks in turn controlled the insurance companies, the railroads, and the great industrial corporations. This system was the medium through which the Wall Street Money Trust controlled the opportunities of the American boy, produced panics at will, and cowed Executives and Congresses, as well as dictating to courts.

RAILROAD OFFICIALS REGULATED.

Section 9 is a provision designed to prevent the officers, directors, and agents of associations and corporations from raiding the properties which they control, and will prevent such transactions as the raiding of the Chicago & Alton Railroad, the New Haven Railroad, and other great institutions so important to the prosperity of our people.

Section 10 requires railroads in making large contracts for construction or maintenance of any kind where the contract amounts to more than $50,000 in any one year to do so by public bidding, preventing conspiracies on the part of the officers of railroads and supply companies to loot the treasuries of the railroads, thereby crippling the arteries of commerce for their personal aggrandizement.

Section 11 apportions the regulation of large interstate business institutions; it confirms the authority of the Interstate Commerce Commission as to common carriers; it authorizes the Federal Reserve Board to prevent unlawful practices by the banks and trust companies of the country; it gives to the Federal Trade Commission the prevention of all unfair and unlawful practices by the great industrial corporations of the country and provides for the enforcement of its lawful orders in the courts.

Section 12 authorizes the commencement of a suit in any judicial district where an inhabitant has been injured as well as in the district where a defendant resides.

Section 13 authorizes subpœnas to run in other districts than that in which the proceeding is pending.

Section 14 makes the guilt of the corporation personal to the director, officer, or agent authorizing the unlawful act.

Section 15 is a reenactment of section 4 of the Sherman Antitrust Act.

Section 16 provides for injunctive relief to persons, firms, or corporations threatened with loss or damage by violation of the antitrust laws.

GOVERNMENT BY INJUNCTION AND CONTEMPT ORDERS.

Sections 17 to 25, inclusive, deal with the procedure and orders in injunction and contempt cases. They limit the application of injunctive relief against working people to such application as would be recognized by the court if no labor dispute were involved, thus making the application of such laws uniform. A trial by jury is authorized in indirect contempt cases. According to the law as recognized at present, the judge is not only authorized to punish for a contempt committed in his court in his presence, but also severely to punish persons who have violated an order at a distance from the court, of which violation the court has no original information, but must hear evidence to determine whether or not a contempt has been committed.

This bill recognizes the great necessity for courts being given ample opportunity and full power to enforce their orders and decrees, but provides that where it is necessary to hear evidence and determine the guilt or innocence of a person charged with violating the order of a court where a penalty is attached a defendant is given the right of trial by jury.

Politicians seeking office, newspapers and magazines, discharging what they conceive to be their duties to the public, and lecturers upon the Chautauqua circuits, for a decade have been denouncing the evils and detailing the consequences of the pernicious practices at which this great measure strikes. Its enactment into law by Congress, its approval by the President, and its rigid enforcement by the Government, as well as the pursuit of the remedies afforded individuals, will do more to guarantee the youth and young manhood of this Nation a fair opportunity in life and to restore healthy business conditions than any measure which has been written into law in half a century.

STAND-PAT POLITICIANS DISAPPROVE THIS BILL.

The school of stand-pat economists and politicians who having been honored with office upon their advocacy of laws granting relief to the people, and have proceeded to enact laws to further intrench private monopoly, does not approve this bill. The ultra advocates of public monopoly or state socialism do not approve this bill, but the great masses of toiling humanity, the little business man who wants the opportunity to grow big, the farmer of America who for years has been obliged to sell his products in the free-trade markets of the world and buy everything that he needs in life and in the operation of his business in a trust-protected, monopoly-controlled market, will be filled with gratitude to those of us who have had a part in the great work which has resulted in this bill.

While in Europe the generations unborn are groaning under the burdens of the staggering war debt now in the making, the future generations of America will be singing the praises of this law and its companion acts for preserving their constitutional rights to life, liberty, and the pursuit of happiness.

"TEETH" NOT EXTRACTED FROM THE BILL.

Since this measure left the conference committee, and while the report of the conferees was under consideration in the Senate, a great deal has been said in the newspapers about the teeth having been extracted from it so that it was as toothless and as harmless as a newborn babe. The authors of such statements evidently have not read the bill. Instead of it being toothless, it is far from it. The gentleman from Arkansas [Mr. FLOYD], one of the conferees, has explained, and probably will do so to this House, that it has a full set of most useful teeth; that there are 26 different new and ample remedies for the relief and protection of the people and the punishment of offenders provided in this law.

SOME READY REMEDIES GIVEN.

It makes guilt personal; it provides not only for mere fines but also imprisonment for those guilty of the practices prohibited; it gives an injured person the benefit of all of the work done by the Government in securing a conviction of a violation of the antitrust laws; in other words, it provides that the evidence procured for public purposes is available to an injured person for his private benefit. Where there has been a conviction of a defendant, a private individual is authorized to plead the judgment or decree of the court. It gives those injured by practices prohibited threefold damages, and authorizes the injured party to sue in his own name and to choose his own forum. It authorizes an individual to seek and have the remedies of the law before his business is destroyed, as well as after.

INJUNCTIVE REMEDY ALSO EFFECTIVE.

The great benefit of some of these remedies will be appreciated when considered in the light of general experience. The railroads of the country were crippling and killing hundreds of thousands of their employees every year when Congress passed what is known as the safety-appliance act. No effort was ever made to enforce the criminal features of that law, but the right of employees to sue and recover damages for injuries received by reason of a failure to comply with the law forced the railroads to equip their cars and engines with automatic

couplers, air brakes, and other safety appliances at a tremendous cost and as expeditiously as possible.

In every State the social evil has been unlawful and criminal punishments provided. However, these criminal punishments have not always been effectual, but the recent remedy of injunctive relief provided in some States has been extremely effective wherever applied. Where the only remedy is a criminal remedy, the advisability of prosecution is addressed to the discretion of the law officer of the community. Should he decide that a prosecution is unnecessary or unwise there is ordinarily no relief. However, where the citizen has been given the right to pursue a separate and a private remedy, violations have immediately ceased and the law has been observed.

Under this law every remedy which the Government or any citizen now enjoys has been preserved; in addition, many new and effective remedies for protection and relief are afforded.

COMPETITIVE COMMERCIALISM ONLY POLICY NOW OPEN.

As I said before, the American people have repudiated private monopoly, and they hesitate to embark upon the unknown sea of public monopoly or socialism. The only alternative left is to give competitive commercialism a fair trial.

The Underwood tariff law, destroying trust-breeding special privileges, the Federal reserve act, which has taken the control of the money and credits of the country from the bankers of Wall Street and placed it in the hands of the people through their Federal Reserve Board, making money panics impossible, and the final enactment of this measure into law, will do more to perpetuate our liberties as a Nation and our opportunities as individuals than any system of laws ever written. Why should it not be so when the very corner stone of our Republic is "equal rights to all and special privileges to none"?

CRIMINAL BIG BUSINESS SURRENDERS TO THE PRESIDENT AND "PLEADS GUILTY."

I can not close this discussion without calling the attention of the House to one other material fact. The laws which we have enacted at this session of Congress, to which I have just alluded, fix the rights of our people. No law will enforce itself. The truth of this assertion is established by a mere reflection. Consider the growth and development of the criminal trusts during the 16 years of encouragement which they enjoyed immediately preceding the advent of President Wilson into the White House; think of the neglect of the people's rights; the timidity of the Department of Justice and its sham battles with big business. On the other hand, reflect upon what has happened since President Wilson went into the White House. He is there by the decree of the American people. They know he has the intelligence to understand the rights of the people and ascertain the wrongs inflicted upon them. They also know that he has the courage and disposition to protect them in the enjoyment of their rights. No set of men was quicker to grasp this fact than those who have robbed the people, wrecked railroads, cornered the shipping of the seas, and been the invisible government of this country, for they have shown it by their acts. Shortly after our great peace President became the Chief Magistrate of this Nation the trusts began dissolving and the magnates sought the White House to "plead guilty and take the lowest punishment." By their conduct, prompted, of course, by selfish motives, they paid the most commanding figure in all the world to-day the highest compliment of his great career.

Adoption of Conference Report on Antitrust Bill.

EXTENSION OF REMARKS

OF

HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914,

On the conference report on the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. SLOAN. Mr. Speaker, there has been a general demand for trust legislation throughout the country. The several political parties in their platforms pledged support for that character of legislation. The Republican Party declared:

The Republican Party favors the enactment of legislation supplementary to the existing antitrust act which will define as criminal offenses those specific acts that uniformly mark attempts to restrain and to monopolize trade, to the end that those who honestly intend to obey the law may have a guide for their action and that those who aim to violate the law may the more surely be punished. The same certainty should be given to the law prohibiting combinations and monopolies that characterizes other provisions of commercial law, in order that no part of the field of business opportunity may be restricted by monopoly or combination, that business success honorably achieved may not be converted into crime, and that the right of every man to acquire commodities, and particularly the necessaries of life, in an open market, uninfluenced by the manipulation of trust or combination, may be preserved.

The Progressive Party declared:

We therefore demand a strong national regulation of interstate corporations. The corporation is an essential part of modern business. The concentration of modern business, in some degree, is both inevitable and necessary for national and international business efficiency; but the existing concentration of vast wealth under a corporate system, unguarded and uncontrolled by the Nation, has placed in the hands of a few men enormous, secret, irresponsible power over the daily life of the citizen—a power insufferable in a free government and certain of abuse.

This power has been abused in monopoly of national resources, in stock watering, in unfair competition and unfair privileges, and, finally, in sinister influences on the public agencies of State and Nation. We do not fear commercial power, but we insist that it shall be exercised openly, under publicity, supervision, and regulation of the most efficient sort, which will preserve its good while eradicating and preventing its evils.

The Democratic Party declared:

A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal as well as the civil law against trusts and trust officials, and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States.

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including, among others, the prevention of holding companies, of interlocking directors, of stock watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

I do not urge these as a demand for fulfillment of platform pledges or as a charge of breach of faith upon any political party. Platform pledges during the last 18 months have lost much in the respect which the public has heretofore paid them. It is doubtful if the platform pledge of any party or of any man will receive the credence that such pledges have heretofore been accorded by the American people. The reason for that, of course, is the numerous definite pledges made at Baltimore and the general disregard, violation, or repudiation which have been registered against nearly every plank in that much-discussed document.

The demand for trust legislation has been nonpartisan and a dominant feature of the public mind. It was thought and expected that trust legislation might be approached, worked out, and passed in a nonpartisan way, but that was not to be. Such as was worked out for the use of the House was obtained and considered in secret by the majority members of the Judiciary Committee. The minority members were denied participation in its formulation. The bill presented to the House was ill considered, crude, and of doubtful workability. However, a large number of Members on this side, in view of the general demand for trust regulation, overlooked the partisanship of the measure and voted for its passage. We considered that it would go to the deliberative body of this Capitol and there be improved, finished, and pressed into workable shape and condition so that some wholesome results might be expected from its enforcement. It has been before that body for some time in original consideration, and for a considerable period later in conference.

Here it comes back to us in such form that while it does not repeal the Sherman law, by virtue of its complicated and peculiarly officered means of enforcement, it will practically supersede the application and enforcement of that law. That law, by reason of its study, enforcement, and judicial interpretation, had become to a large extent an effective instrument for the solution and control of the trust problem.

The law as embodied in this conference report will be a medium for compromising and compounding offenses under the Sherman law. The bill we sent over, and which we expected to be improved and finished, has been emasculated and weakened beyond recognition and beyond effective utilization.

It is proposed by this conference report to apply a palliative plaster and a soothing salve where the public has been demanding a surgical operation. The people have demanded legislation adverse to the trusts. Here we are presented a conference report which simply coddles them. A vote for this conference report is a concrete and condensed apology to the trusts, present and future, for having ever opposed them.

This bill, sent by vote of the two Houses to conference, seems to have reached a dental parlor instead of a finishing factory. At least it comes back to us champing its sore, bare, and vacant gums. It should be returned to the conference committee by such an emphatic vote as will be to that committee a command to restore its teeth and make it stand for something.

Principles of the Progressive Party.

Col. Roosevelt's Speech at the Progressive Convention in Bay City, Mich., September 30, 1914.

EXTENSION OF REMARKS

OF

HON. ARTHUR R. RUPLEY

(PROGRESSIVE CONGRESSMAN AT LARGE),

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914.

Mr. RUPLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech of Col. Roosevelt, delivered at the Progressive Convention in Bay City, Mich., September 30, 1914, on the principles of the Progressive Party of the Nation, as follows:

Mr. Chairman and you men and women of Michigan, naturally I take a peculiar interest in Michigan. I feel under a peculiar obligation to the people of Michigan, and, wherever else I was unable to go, to Michigan I would go [applause]; and I wish right at the outset to say how particularly glad I am to see in this audience, as in every audience I have addressed during the past fortnight, men who fought in the great war, men who fought in the late fifties and in the early sixties in founding the then progressive party—the Republican Party of that day. And when these as men are being true to the spirit of their youth in acting as they now do, they are being loyal to the same ideals to which they were loyal when they upheld the doings of Abraham Lincoln. Our opponents ask us to be loyal to the party of Abraham Lincoln. I ask you to be loyal to the principles of Abraham Lincoln. Abraham Lincoln was nearly 50 years old when he left the party in which he had spent his entire manhood because that party no longer represented, no longer stood for the vital needs of the country, and he tossed to one side the taunts of the men who jeered at him for leaving the old party ties, because, as he phrased it, his loyalty was due to the people of the United States, and he stood with the party that stood for those needs. I continually meet nice people, worthy people, who say, "Oh, yes; we agree with all your principles, but we don't like to leave the old party. My father was in it, or my grandfather was in it. We don't like to leave the old parties."

Now, I am in the grandfather class myself, I am happy to say, and if 50 years hence the Progressive Party has fallen under the control of men like Mr. Barnes, Mr. PENROSE, Mr. SMOOT, the individuals who stole the convention here two years ago, and their like; if the Progressive Party has then fallen under their control, and my children and grandchildren do not leave it, I will turn in my grave. [Applause.] Our grandchildren can prove their loyalty to us only by acting in our spirit and adopting any instrument necessary in order that they may make their action efficient at that day; and as I trust our grandchildren will act in reference to us, so we must act in reference to our forefathers. Let me just draw an illustration from military life. You see, you veterans of the big war, that Mr. WOODRUFF and I are veterans of the little war. I want you just to look at one perfectly plain, common-sense example from military history. Washington not only was the founder of our Republic, but he was the general who commanded the armies of the infant Republic, and he got his soldiers the best weapons that the day afforded. He got them first-class flint-lock muskets. That is all they had then, and he did mighty well in getting them for them. What would you think of an American general to-day who said that he was going to show his loyalty to Washington by arming the United States soldiers with flint-lock muskets? [Applause.] The American general to-day can not be loyal to the spirit and the principles of Washington except by refusing to adopt the weapons of Washington; and it is just so in civil life; you can not be loyal to the principles of Abraham Lincoln, you can not be loyal to the principles of Thomas Jefferson, except by dropping the Republican and Democratic Parties and coming into and battling for the only party which at this day stands for the democracy for which Jefferson stood, for the principles and policies which Abraham Lincoln represented and which he strove to enact into the Government of our Nation.

And a little later, in what I have to say to you, I am going to speak of the men who now appeal to the memory of Jefferson and to the memory of Lincoln when they appeal to voters whom they address. When these men who are old, whom I see here in the front ranks, were young, the then Progressive Party was formed of men such as Lincoln, who had formerly been a Whig, of Oliver P. Morton, who had formerly been a Democrat, taking them from whichever old party they had formerly been associated with, because they had felt the new life stirring in their veins. In just the same way we make our appeal to the rank and file of both the old parties. We are fighting for them against the machines and the bosses. We ask them to come in in the same spirit in which 60 years ago their intellectual and spiritual forefathers came into the then Progressive Party, the Republican Party of that day, just as Oliver P. Morton, the Democrat, and Abraham Lincoln, the Whig, came together. So I have been speaking in Illinois for our candidate for Senator, who until two years ago was a Democrat, and in Indiana for our candidate for Senator, who until two years ago was a Republican, and Beveridge and Robbins are both in the Progressive Party now. I spoke in Indiana on the same platform with our candidate for Congress in one district, until two years ago a Republican, and Shively, a kinsman of the present Democratic Senator, who is a candidate for Congress in another district. We ask Republicans and Democrats alike, if they believe in the principles for which we stand, to come in with us, for they can render no efficient service in the old parties.

I have been informed that the standpat paper here this morning stated in an editorial designed to show that we were only an adjunct of the Democracy, that I had said that we had accomplished all we wished in Maine by beating the Republican Party. I never made such a statement, but I have long given up denying that kind of misstatement because it is not made from ignorance, it is made with deliberate purpose—to deceive—and when you expose one misstatement they simply make another, and I only call attention to that to aid to point out the fact that our opponents have to rely on misrepresentation to beat us, not on argument but on misstatement of the facts to beat us, and I want to point out this further fact to our standpat friends of the Republican Party. They state that we are the adjunct of the Democracy. The Democracy is in power now only because the standpatters of the Republican Party two years ago stole from the rank and file of the party their right to nominate their own candidate. [Applause.] Two years ago the Republican bosses and leaders, carrying out the dictates of their great sinister masters who stand behind the scenes, the men who in the big business world had used these politicians as their agents, carrying out their dictates. The Republican machine masters stole the convention, they resorted to fraud, and to violence alike. One of the first and most flagrant instances was what they did in this State, and I think it was in this city and in this very building. They stole delegates from Michigan, and then when we got the vote taken before the people we beat them out two to one. [Applause.] Although they had the money, they had the organization, and they were able to make an appeal to party regularity, with those things eliminated we would have beaten them ten to one. The delegates, the standpat delegates, and I wish to call the attention of the standpat newspaper to these statements of fact, the standpat delegates whom it represents and for whom it spoke in the Chicago Republican convention two years ago, represented nothing whatever but successful swindling, successful theft, that is all [applause]; and those people ask us to amalgamate with them! [Applause.] They ask us to come together with them! We will come together with them in exactly the sense that a policeman comes together with a burglar. [Applause.]

I want to call the attention of every Michigan sugar grower to the fact that all protection has been taken off sugar because these men of whom I have spoken, these standpatters, preferred to see the Democracy in power rather than to see the rank and file of their own party control the party organization. [Applause.] They are responsible for everything that has been done, and just one word more as to our friends who say, "Oh, well, we are Progressive Republicans." They are contradictory terms. The organization of the Republican Party is more reactionary than it was two years ago, because they have eliminated the dead-game Progressives from their ranks. The organization is more stand pat, more reactionary, than it was two years ago. It is composed of men like Mr. Barnes in New York, like Mr. PENROSE in Pennsylvania, like Mr. SMOOT in the Rocky Mountains, like the spiritual heirs of Mr. Lorimer in Illinois. They control the organization absolutely, and if a man who has Progressive impulses runs on their ticket and is elected all that we accomplish is to add strength to the old, sinister reactionaries in charge of the Republican Party. He takes away from the strength of the Progressives, he adds to the strength of the reactionary elements among our people. * * *

There is but one way in which efficiently to fight for Progressive principles, and that is through the Progressive Party. [Applause.]

And I call the attention of the older men here, the men of the Civil War who remember the days of Abraham Lincoln, to the fact that in 1858, when Lincoln ran for Senator against Douglas, Douglas made exactly the plea with the near Progressives or would-be Progressives as the Republicans and Democrats make to us. Douglas, as you men may remember, was supported by some Republicans, like Horace Greeley, who says he is pretty good, he is pretty progressive, he has gone quite a distance; and Abraham Lincoln, with his clear, unfaltering logic, pointed out that that type of man simply stood for mischief in a body politic, and that the fact that he gone a little distance merely made him the more dangerous ally. You can do no good as a Progressive if you sit on the mourners' bench under Messrs. PENROSE and Barnes in their party organization [applause], and I wish to call your attention to just this feature of the appeal made to you, you Democrats, you ex-Democrats, you ex-Republicans, to stand by the party of Thomas Jefferson or to stand by the party of Abraham Lincoln, and I shall select Illinois, because in Illinois the things that in almost every State have been done in the darkness were by a fortunate chance dragged out into the light. It is not that the things done in Illinois were worse than those done in my own State of New York or in Pennsylvania, but we were able to get proof of it. Men on the inside, men of intelligence, know that such things have been done in New York and Pennsylvania, but the proof only came as regards Illinois, so that as regards Illinois we have the documents to refer to. A couple of days ago I was there in Illinois, and you remember that six years ago Mr. Lorimer was elected as Senator from Illinois, and his actions—what he had done and the methods employed in electing him—were so flagrant that Lorimerism became a term that we all of us understand throughout the country. At this moment they are running for Senator in Illinois Mr. SHERMAN, whose chief lieutenants were the lieutenants of Mr. Lorimer, and one of these ex-supporters of Mr. Lorimer, who voted for him, is running for Congressman at Large on the ticket with Mr. SHERMAN, and the Democrats are running Mr. Roger Sullivan, whose lieutenants supplied the Democratic votes necessary to send Mr. Lorimer to the United States Senate, and Mr. SHERMAN is very strong on the subject of Abraham Lincoln and Mr. Sullivan correspondingly strong on the subject of Thomas Jefferson.

Now, when Mr. Lorimer was elected he had about half—a little over half—of the Republican members of the legislature, but not enough to elect him. There was a long deadlock, and then one night the lieutenants of Mr. Lorimer and the lieutenants of Mr. Sullivan came together and the next morning enough Sullivan Democrats turned up, joined with the Lorimer Republicans, to send Mr. Lorimer as a nonpartisan candidate to the United States Senate. Now, friends, I want you to think of the next thing that I have to say for yourselves. Do not take my word for it; supply the answer yourselves to my question. The arrangements—I should like to put the word "arrangements" in quotation marks—the arrangements that resulted in the election of Mr. Lorimer and the transfer of the Sullivan Democrats to his support were made overnight in hotel parlors, hotel bedrooms, with the blinds down and the doors locked, or in nooks in saloons where nobody would overhear what was being said. Now, do you suppose that the lieutenants of Mr. Lorimer who are now the lieutenants of Mr. SHERMAN, and the lieutenants of Mr. Sullivan, when, that night in those rooms behind closed blinds and with the doors locked—do you suppose that when they discussed the details of the election of Mr. Lorimer to the Senate they mentioned the names of Abraham Lincoln and Thomas Jefferson? [Applause.] But they are just as strong for party regularity as your standpat newspapers are. Again, at the end of the session a good deal of light was thrown on that legislature, and at the end of the session it appeared that a number of the members, including a considerable number of those who had voted for Mr. Lorimer, came together in similar rooms, with the blinds down, with the doors locked, to divide what was known as the jack pot. Do you suppose when they came together, those Republicans and Democrats, the lieutenants of the men now running for the Senate on the two tickets, the two old party tickets in Illinois—do you suppose that when they came together to divide the jack pot they bothered themselves much about the principles of Abraham Lincoln and Thomas Jefferson? [Applause.] I do not have to answer that question. You answer it for yourselves. Now, do not forget that it is those men and those like them who implore the plain citizens outside never to desert the old party, to prove true to the old party name and stay in the old party organization.

NOW, what I ask you to do is just this: The bosses, the master mechanics of the two old machines, in any matter of common interest to them, combine against you. I ask you in the public interest to combine against them. [Applause.] They continually appeal to the names of parties that have lost all right to existence, to the memories of great men who are dead; they continually appeal to those names, those party names, to those names of great party leaders in the past. They know that the average good citizen is pretty busy earning his livelihood and taking care of his wife and children, and that he has not very much time to think of political matters, and that unfortunately a good portion of the press keep him misinformed as to the facts and therefore he is apt to take refuge by saying that he belongs to a certain party and just do whatever the managers of that party tell him to do. We all know that that is the case among people who are our friends and acquaintances. Now, I ask those good people to take the trouble to think of the facts, as I have set them before them this afternoon—to take the trouble to think of the fact that the bosses of the two old machines never have one moment hesitated to come together for their own purposes and to suit their own purposes; never for one moment hesitated to make any kind of alliance in their interest and against the interests of the people as a whole, and the measure they mete out to you do you mete out to them in return. [Applause.] And here in this State I am pleased that I can come to speak not only for the principles of the Progressive Party of Michigan but for the character of the men whom that party has put up. Take Mr. Pattengil, for instance. [Applause.] It augers well for us that we should take a man who has rendered such honorable service as superintendent of instruction and put him up for the highest office in the gift of the State. Our aim is to choose men who render public service rather than men whose service has been that purely of the narrowest machine politics.

It is a pleasure to me to be able to speak for your congressional ticket, for men like Mr. WOODRUFF and Mr. MACDONALD [applause] and their associates, and I ask you, the voters of Michigan, to study the records made by Messrs. WOODRUFF and MACDONALD in the National Legislature, and see the way in which they have made their promises good by their performance. [Applause.] In Mr. MACDONALD'S case, his bill for an employment bureau—and I want the wageworkers to study that bill and see that that was taking one of the steps forward which we said we would take in working for the welfare of the wageworker—and I wish you to study the really remarkable record that Mr. WOODRUFF has made on all questions that have been before the Congress, and as of being of especial interest to you, what he has done in connection with the sugar tariff and with good roads. Now, take the sugar tariff. I am going to make a diversion for a moment, to tell you about my friends in Louisiana, suggested by my speaking of the sugar tariff. I was down two or three weeks ago in Louisiana. I had a perfectly remarkable reception. I believe that two years hence Louisiana will cast her electoral vote for the Progressive Party [applause], and it was an extraordinary thing to see how Louisiana, how the Progressives in Louisiana, with hardly any money, were carrying on such an efficient campaign. I spoke at places from an erected scaffold. The carpenters that had put it up were Progressives, and had given their work free. The draymen who carried the lumber there were Progressives, and had worked free, and they had selected a lumber company whose head was a Progressive, and he had given the lumber free; and I went around in motor cars that belonged to Progressives, and they were given free, and the chauffeurs were Progressives, and they worked free.

If a man could give any money he gave it, and if he could not he worked. It was being managed on a general democratic basis, each man giving what he was able to make the party a success, and the prime factor in bringing over those Louisianians to us was that they had grown tired of having the Democracy say one thing before election and the other thing after election—pledge itself to one course of conduct in its platform, and then after election announce that the platform was only meant to get elected upon, that it was not meant to apply in good faith afterwards, a condition, my friends, of rank political immorality. I have not any more respect for a man who does not tell the truth when he speaks on the stump than when he speaks in private life. If a man will break a promise on the stump you can guarantee that in office he will prove unfaithful to the interests of the people if he thinks it is to his interest to do so. [Applause.] The Louisianians before election had been explicitly assured by those responsible for the management and control of the Democratic Party that their interests would not be hurt, and then all the duty was taken off of sugar. Now, if it had been deemed proper to make a reduction in the duty, that would have been all right, there would not have been any complaint to make; but it was a rank injustice to take the duty off sugar and take it off farm products and still to leave the duty on the manufactured products in other regions. It was not fair play. It was not a square deal, and the result has been

shown in striking fashion this fall, for sugar growers in many places permitted much of their land to go out of cultivation for they could not live with no protection whatever. Then along came the war; the demand for sugar increased, and if the sugar had been produced, as it should have been, everyone would have been better off. You sometimes reap a great deal of advantage for the time being by making a promise that can not be kept, but it is not nice for him when the time for keeping the promise comes.

Two years ago our Democratic brothers told us that if they would be allowed to do what they wished with the tariff and reduce it in the way they wished that they would solve the trust question, reduce the cost of living, and increase the ability of the average man to earn a living. I want to contrast the prophecy with its fulfillment. It reminds me of the famous definition of the French pupil who was asked to define a crab. He said it was a red fish that walked backward, and the professor said that the definition was an excellent one, with three exceptions; that it was all right except that the crab was not a fish, that it was not red, and that it did not walk backward. [Applause.] It is the same way with the Democratic promise about the tariff. It has not affected a single trust in the slightest degree. It has not reduced the cost of living, and it has in places impaired the ability of the average man to earn a living [applause], and the experience with sugar illustrates just what I mean. The tariff was taken off sugar. Every sugar grower in the United States was hurt, and the Sugar Trust was not affected in the smallest degree. The Sugar Trust had no interest one way or the other in the reduction, and the tariff reduction that was supposed to be aimed at the trust left it unaffected and heaped the damage on the small man who was growing sugar. He was not the only man who was unfavorably affected. We paid more for our sugar than we did before. You have put in a draft of your platform that I saw an expression that I have been fond of using, that the Republican policies make some people too prosperous, that the Democratic policies do not make anyone prosperous enough, and it is only by following out the plans that the Progressive Party has promulgated for economic and industrial prosperity and decency that we can achieve satisfactory results.

I am going to take the liberty of telling two stories. The first one can stand on its own merits. In the second story there is one swear word, so I shall mention that it was told me by a Congregational clergyman, which, I think, absolves me. The first one, which illustrates, I think, very well the difference between the Republican and the Democratic and the Progressive Parties in their dealing in industry, relates that there was a certain housewife—and from her subsequent actions she evidently was a Progressive—and to whom some very delicious nuts were sent, and she put them in a handsome glass jar with a narrow neck; and along came a greedy little boy, and when he thought nobody was looking he put his arm down the neck and grabbed all the nuts he could get in his hand, and then found he could not draw out the hand. After a while he began to cry, and said the country was confronted by a business crisis, and along came his Republican uncle and said, "Burst the jar," and along came his Democratic uncle and said, "Cut off his hand," and his mother said, "Oh, no; let Johnny drop the nuts that aren't his and he will get his hand out." [Applause.] Now, that is just what we propose doing in the economic situation. We do not propose to hurt any man, any business man who is doing decent. On the contrary, of all the parties we are the only one which has not any hesitation in saying that we favor the efficient business unit, no matter whether it is big or little, that is necessary to do the business of to-day. [Applause.] We can afford to say that because everyone knows we are trying to give a square deal. Our opponents can not afford to say it, because in their own hearts they know they are not trying to give a square deal, and they try to cover up their paucity of performance by a surplusage of promise. They promise to do what can not be done because their masters will not let them promise to do what can be done. We know that this is the age when there must be bigger industrial units than ever before. You can not manage an electric-light age by tallow-candle standards. You can not go back to the conditions of the middle of the last century unless you are willing to go back to stagecoach and wagon conditions, and we are not willing to go back to those conditions. The big industrial units are necessary. Moreover, it is necessary that business should prosper, not only as a matter of justice to the business man, but because the rest of us do not prosper if the business man does not.

If a business does not prosper, the customers are badly served and the wageworkers get insufficient wages. A concern that is going behind would not treat the general public well and can not treat the men that work for it well. It is our interest to see that the business concern that does well prospers. [Applause.] Now we intend to work. We draw the line never against efficiency. We do not draw the line on size; we draw the line on conduct. [Applause.] There are certain businesses with which we ought actively to interfere. I am going to touch on one type of business in a minute. That is the water power. But as regards general business, the ordinary business, go ahead and succeed. The more you succeed the better pleased we are. If the success is achieved by serving and not swindling the public, we wish you well. We wish you all the efficiency possible. We wish you all the reward of the efficiency; but if it is a big factory owner, a big railroad man, the reward must not all of it stop in the front office. A reasonable proportion must show up in the pay envelopes or else it is not a square deal. [Applause.] Unless there is success it can not show up in the pay envelopes. If you do not leave any of it in the front office, there would not any of it get in the pay envelopes, but it must not all stop in the front office. A reasonable proportion must get through and appear in the pay envelopes, without which the success can not be achieved. Men must realize more and more that the ideal is that of a partnership; that the man who contributes the capital in the business, the man who gives the management, and the man who gives the manual labor, each one of them should regard the others as his partner. [Applause.] Now, that is our idea. We are not going to be able to realize it entirely, but we are to a degree. To do that, friends, we can not use flintlock legislation. Business conditions require high-power, smokeless powder. What ought to be done is to establish a control, supervision and control, by the Government, with the clearly expressed intention that that supervision and control is for the purpose not of hurting the business but of helping it, of helping the business to do well only; also of seeing that he treats his fellows well [applause], that he treats the men with whom he deals and the men who work for him well.

Now, friends, our opponents are fond of calling me an anarchist or a communist or something else attractive. You think yourself of what I have said now about business and ask yourselves if it isn't a common sense way of saying that I want to give a square deal to the business men and to the wageworker, to the employer and to the employed. That isn't anarchy. That isn't communism. It is the antidote to anarchy and communism. [Applause.]

Now, there are some things, however, that the community has to do. Years ago I pointed out, when I was President, that if the country were wise it would keep control of the fee of the water power of the country. [Applause.] There you have a natural monopoly and a monopoly that owes nothing whatever to the men who take it up. The man who takes up water power hasn't thereby rendered any service to the community for which he is entitled to have it. He has simply taken for himself a power which the country ought to prevent his taking for himself, and that is why the great electric trusts that are based on monopoly of water power are so dangerous; and Congressman WOODRUFF among all his varied public services, has rendered no greater public service than that he has rendered in connection with the attitude he has taken about these water-power monopolies. [Applause.] And now, friends, I ask you to remember this: Whenever any man takes a position such as Mr. WOODRUFF took on this subject he incurs venomous hostility on the part of the big interests. Mr. WOODRUFF has incurred that hostility from those big interests that are menaced by his actions, and he is doing it because he is doing you a favor, because he is representing the plain people; and if the plain people don't stand by him, if they don't stand by the men like him, they themselves and their children and their grandchildren will pay the penalty. [Applause.]

Now, friends, I speak of people who ask us to go back to the old parties. I have spoken to you of the Progressives of Louisiana. They can not go into the Republican Party, those people. It has been associated with misgovernment for the last 30 or 40 years in their State, so that they could no more go into it than I could not go back to the party of Mr. Barnes or the Penrose Republican Party in Pennsylvania [applause], and as for the Democratic Party, it is of no earthly use North or South, because its whole history, its development, and its principles forbid it to use power as power must be used under modern conditions. For example, Mr. WOODRUFF has been interested in the subject of good roads. We are told it is not constitutional for the Government to help with good roads. I hold that it is. I hold that the Constitution was made for the people and not the people for the Constitution [applause], that it was designed by our forefathers not as a strait-jacket to prevent us achieving our full growth, but as an instrument devised to, as its preamble states, for the better securing of justice among the people of the United States. You men of the old days, you will remember when they said that Abraham Lincoln

was unconstitutional. They proved that he was unconstitutional to put down secession, but he put it down, and they accused him of being disrespectful because, when the Dred Scott decision was made, he said he would never rest until the people repealed that decision, and the most striking example of the recall of the judicial decision that we have ever had was the recall that Abraham Lincoln finally engineered of the Dred Scott decision [applause], on the ground that it was not properly a judicial decision, on the ground that the Constitution belonged to the people of the United States; that they made it, they lived under it, they fought and died for it; and that it was for them and not for any small body of men, however well-meaning, to declare what that Constitution permitted them to do in securing justice. [Applause.] If I err in my determination about the Constitution and the courts, I err in the company of Abraham Lincoln. [Applause.] In the same way we are told that it is unconstitutional—I shall not discuss the good roads question at length with you.

The proposal of Mr. WOODBURN is to help each locality, but only on condition that the locality does first-rate work itself; that whatever the locality, be it State, or county, or township, does its best in making a first-class road, a given proportion of the expense shall be paid by the Nation, so that unless the people take the trouble to build good roads they do not get any help; but if they do, the burden is partially lifted from them and as much from the township and from the small people to whom their roads are just as important, as much from them as from the others. That is substantially the plan. I can not go into the details of these plans, but with the general purpose and object I am in the most hearty sympathy. We are told that it is unconstitutional to abolish by national action child labor. Why? Because they said the forefathers did not provide for the abolition of child labor. Of course they did not provide for the abolition of child labor. There was not any child labor in Washington's days. There were not the machines; there were not the factories in which child labor becomes an incident to commercial success. There were not the great institutions where it was possible to commercialize the stunted lives of the children who are to make the next generation, to commercialize the labor of boys and girls 7, 8, and 9 years old, some of them not 7, 8 or 9 years old. I have myself seen children employed in oyster canneries who were 6 and 7 years old, with their hands puffy and swollen from the kind of work they had been compelled to do, and we are told that the United States Government is forbidden by the Constitution to remedy a wrong like that; and my opponents say, to use the language of Mr. Taft, that I "laid impious hands on the ark of the covenant" when I protest against the action of the legislature who says that the Constitution does not permit us to remedy wrongs like that. If they say I attack the Constitution, they err. I defend the Constitution. [Applause.] I defend it from its worst and most dangerous foes when I refuse, as far as I am able to permit it, to be made an instrument for the perpetuation of injustice and wrongdoing such as I have told you. [Applause.]

I hold that we have the right to do what the needs of to-day demand, and that the Constitution was meant for us and that we have the right to use it so as to secure justice. Therefore I hold that the Government should have full power, and I repel the assumption that the power can be denied, whether the assumption is made in the name of State rights or of any other system of philosophy. Regarding State rights, I remember four years ago in arguing for these matters with a man in New York; he met me by saying, Oh, well, he stood for the right of the community and therefore as a New Yorker he objected to the doctrine I was preaching about, the workmen's compensation act; that he objected to it; that New York should have the power to deal in these matters for itself and not be interfered with and overridden by the Nation. I suddenly remembered a little about his private history, and I said, "By the way, where do you sleep?" He said, "In Hoboken." I said, "That is in New Jersey, is it not?" He said, "Yes; but I work in New York." "Where do you vote?" "In New Jersey." I said, "Now, you sleep in New Jersey and you vote in New Jersey, you do your business when you are awake in New York, and you appeal to us not to use the national power because you object to its use in the State of which you are not a citizen." [Applause.]

I have only got a minute or two more; this is the kind of an audience I would like to speak to all of the afternoon. [Applause.] I want to give you an illustration of the kind of thing I mean when I say I want to get and the Progressive Party wants to get power nationally to deal with questions of this nature. I spoke of the workmen's compensation act just now. We had in New York a court that was composed usually of very honest, good people, whose views of the Constitution have, I am sorry to say, in the past too often rested in the flintlock state, and four years ago they denied that we had the right to have a workmen's compensation act in New York.

The Supreme Court of the United States had decided we had a right to have it in the Nation, that we could apply it, for instance, on interstate railways. Other States like Iowa, Massachusetts, and others had decided that we could have it there, but in New York the judges said no, it was unconstitutional in New York. Under those decisions the workmen's compensation law was constitutional on a freight car going from Boston to Buffalo, but not constitutional as regards a freight car going from Albany to Buffalo. So if a train from Boston came along and picked up half a dozen cars at Albany and then went toward Buffalo, and if at Rochester a brakeman fell off he had to pick his car. [Applause.] If he fell off before a Boston car and was injured he could recover damages, but if he fell off before an Albany car it was "laying impious hands on the ark of the covenant" for him to try to recover damages. Now, friends, our proposals are to treat these questions with common sense in a spirit of fair play and justice. We most emphatically do not intend to wrong the railroad. We know the railroad must earn an ample return on its capital, giving an ample earning for the management, but we do not intend that there shall be so much water in it that earning dividends on the water prevents the payment of proper wages or the giving of proper service to the community. We intend that the railroad shall do justice, and we intend it shall receive justice, and I would no more yield to the demagogic claims against the railroad than I would yield to improper pressure on behalf of the railroad. You do not get a square deal unless you give one. Handle the thing in common-sense fashion. Take for example, as illustrated—I mean in the business world—the difference between ourselves and our opponents, the dissolution of the Standard Oil Trust. I asked Congress to give me legislation that would work well while I was President. They would not do it. I had to do the best I could with the flintlock laws that I had. Suit was brought by me against the Standard Oil Co., and some years afterwards, after it proceeded a sufficient length of time, the Supreme Court decided against the Standard Oil Co. It was most emphatic that the managers of the Standard Oil Co. had behaved very badly, criminal, and accordingly it decreed that the Standard Oil Co. should be dissolved. It was dissolved. It was dissolved into, I think, 37 companies, and after it was dissolved and people could catch their breath they found that the result was that the men whom the court had denounced as criminals and wrongdoers had declared heavy extra dividends for themselves.

Mr. Rockefeller had added to his already modest fortune about eight millions of dollars, and that the only effect as regards the people at large was that they paid more for their oil. The price of oil went up to us and the dividends increased to them. That was all that happened from the application of the kind of flintlock legislation in which our opponents put their trust. Now, under our plan there would have been a Government commission with power to supervise everything. They would without hesitation have taken control of the prices in order to see that the fair-play game was carried out. The wolf would have been a long distance from the door of the man at the head of the corporation, and there would have been fair play for the men who would not get fair play on other terms.

Now, friends, I told you I was going to tell you one other story. That is the story for which I have theological authority. It is related of a certain professor that his children did not get along well with their two aunts, and when he was informed that Bill, the oldest boy, had spoken disrespectfully of his aunts, he examined Bill and said, "Bill, I understand you have spoken disrespectfully of your aunts." Bill hung his head. The professor continued, "Bill, I understand that you have said that your Aunt Grace was a fool." Bill looked about and said, "Well, I did say so." The professor continued, "I understand, Bill, that you have said that your Aunt Hannah was a damn fool." Bill said, "Yes, I did say so." The professor paused, then he said, "Well, William, that is the precise distinction I draw between them myself." [Applause.] Now, I shall not pretend to say which of the old parties is Aunt Grace and which is Aunt Hannah [applause], but that is the precise distinction I draw between them, and, friends, I ask you to go with us, because the old parties are looking backward and we are looking forward. I ask you to go with us, because we alone have a sane, a balanced, a reasoned, and a just program of action, because we alone seriously, resolutely, but with common sense, are endeavoring to make this land—this land in which our children and children's children are to dwell—a land which will be a good place for anyone to live in, because it is a good place for everyone to live in.

President's Letter of October 17, 1914, and Reply to Same.

EXTENSION OF REMARKS
OF
HON. OSCAR W. UNDERWOOD,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 19, 1914.

Mr. UNDERWOOD. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the President's letter of October 17, 1914, and my reply to same.

The letter and reply are as follows:

THE WHITE HOUSE,
Washington, October 17, 1914.

MY DEAR MR. UNDERWOOD: I can not let this session of Congress close without expressing my warm admiration for the fidelity and intelligence with which the program outlined in April and December of last year has been carried out, and my feeling that the people of the country have been served by the Members of this Congress as they have seldom, if ever, been served before. The program was a great one, and it is a matter of deep satisfaction to think of the way in which it has been handled.

It had several distinct parts and many items, but, after all, a single purpose, namely, to destroy private control and set business free. That purpose was manifest enough in the case of the tariff and in the legislation affecting trusts; but, though perhaps less evident upon the surface there, it lay at the very heart of the currency bill, too. May I not add, even though it lies outside the field of legislation, that that, and that chiefly, has been the object of the foreign policy of the Government during the last 18 months?

Private control had shown its sinister face on every hand in America, had shown it for a long time, and sometimes very brazenly, in the trusts and in a virtual domination of credit by small groups of men. The safest hiding place and covert of such control was in the tariff. There it for a long time hid very shrewdly. The tariff was a very complicated matter; none but experts thoroughly understood its schedules. Many of the schedules were framed to afford particular advantages to special groups of manufacturers and investors. That was the soil in which trade combinations and combinations of manufacturers most readily grew, and most rankly. High prices did not spring directly out of the tariff. They sprang out of the suppression of domestic, no less than of foreign, competition by means of combinations and trade agreements, which could be much more easily contrived and maintained under the protection of a high tariff than without it. The European war came before the withdrawal of this much-coveted opportunity for monopoly could show its full effects and active competition bring prices to their normal level again; but it is clear enough already that the reduction of the tariff, the simplification of its schedules so as to cut away the jungle in which secret agencies had so long lurked, the correction of its inequalities, and its thorough recasting with the single honest object of revenue were an indispensable first step to reestablishing competition.

The present Congress has taken that step with courage, sincerity, and effectiveness. The lobby by which some of the worst features of the old tariff had been maintained were driven away by the mere pitiless turning on of the light. The principle was adopted that each duty levied was to be tested by the inquiry whether it was put at such a figure and levied in such a manner as to provoke competition. The soil in which combinations had grown was removed lest some of the seeds of monopoly might be found to remain in it. The thing had needed to be done for a long time, but nobody had ventured before to undertake it in systematic fashion.

The panic that the friends of privilege had predicted did not follow. Business has already adjusted itself to the new conditions with singular ease and elasticity, because the new conditions are in fact more normal than the old. The revenue lost by the import duties was replaced by an income tax, which in part shifted the burden of taxation from the shoulders of every consumer in the country, great or small, to shoulders more certainly able to bear it.

We had time to learn from the actual administration of the law that the revenues resulting from the double change would have been abundant had it not been for the breaking out of the present war in Europe, which affects almost every route of trade and every market in the world outside of the United States. Until the war ends and until its effects upon manufacture and commerce have been corrected we shall have to impose additional taxes to make up for the loss of such part of our import duties as the war cuts off by cutting off the imports themselves—a veritable war tax, though we are not at war; for war, and only war, is the cause of it.

It is fortunate that the reduction of the duties came first. The import duties collected under the old tariff constituted a much larger proportion of the whole revenue of the Government than do the duties under the new. A still larger proportion of the revenue would have been cut off by the war had the old taxes stood, and a larger war tax would have been necessary as a consequence. No miscalculation, no lack of foresight, has created the necessity for the taxes, but only a great catastrophe world-wide in its operation and effects.

With similar purpose and in a like temper the Congress has sought, in the Trade Commission bill and in the Clayton bill, to make men in a small way of business as free to succeed as men in a big way and to kill monopoly in the seed. Before these bills were passed the law was already clear enough that monopolies once formed were illegal and could be dissolved by direct process of law and those who had created them punished as for crime. But there was no law to check the process by which monopoly was built up until the tree was full grown and its fruit developed, or, at any rate, until the full opportunity for monopoly had been created. With this new legislation there is clear and sufficient law to check and destroy the noxious growth in its infancy. Monopolies are built up by unfair methods of competition, and the new Trade Commission has power to forbid and prevent unfair competition, whether upon a big scale or upon a little, whether just begun or grown old and formidable. Monopoly is created also by putting the same men in charge of a variety of business enterprises, whether apparently related or unrelated to one another, by means of interlocking directorates. That the Clayton bill now in large measure prevents. Each enterprise must depend upon its own initiative and effectiveness for success and upon the intelligence and business energy of the men who officer it. And so all along the line. Monopoly is to be cut off at the roots.

Incidentally, justice has been done the laborer. His labor is no longer to be treated as if it were merely an inanimate object of commerce disconnected from the fortunes and happiness of a living human being, to be dealt with as an object of sale and barter. But that, great as it is, is hardly more than the natural and inevitable corollary of a law whose object is individual freedom and initiative as against any kind of private domination.

The accomplishment of this legislation seems to me a singularly significant thing. If our party were to be called upon to name the particular point of principle in which it differs from its opponents most sharply and in which it feels itself most definitely sustained by experience, we should no doubt say that it was this: That we would have no dealings with monopoly, but reject it altogether; while our opponents were ready to adopt it into the realm of law, and seek merely to regulate it and moderate it in its operation. It is our purpose to destroy monopoly and maintain competition as the only effectual instrument of business liberty.

We have seen the nature and the power of monopoly exhibited. We know that it is more apt to control government than to be controlled by it, for we have seen it control government, dictate legislation, and dominate Executives and courts. We feel that our people are safe only in the fields of free individual endeavor where American genius and initiative are not guided by a few men as in recent years, but made rich by the activities of a multitude, as in days now almost forgotten. We will not consent that an ungovernable giant should be reared to full stature in the very household of the Government itself.

In like manner by the currency bill we have created a democracy of credit such as has never existed in this country before. For a generation or more we have known and admitted that we had the worst banking and currency system in the world, because the volume of our currency was wholly inelastic; that is, because there was more than enough at certain seasons to meet the demands of commerce and credit, and at other times far too little; that we could not lessen the volume when we needed less nor increase it when we needed more. Everybody talked about the absurd system and its quite unnecessary embarrassments, sure to produce periodic panics; and everybody said that it ought to be changed and changed very radically; but nobody took effective steps to change it until the present Congress addressed itself to the task with genuine resolution and an intelligence which expressed itself in definite action. And now the thing is done.

Let bankers explain the technical features of the new system. Suffice it here to say that it provides a currency which expands as it is needed, and contracts when it is not needed; a currency which comes into existence in response to the call of every man who can show a going business and a concrete basis for extending credit to him, however obscure or prominent he may be, however big or little his business transactions.

More than that, the power to direct this system of credits is put into the hands of a public board of disinterested officers of the Government itself who can make no money out of anything they do in connection with it. No group of bankers anywhere can get control; no one part of the country can concentrate the advantages and conveniences of the system upon itself for its own selfish advantage. The board can oblige the banks of one region to go to the assistance of the banks of another. The whole resources of the country are mobilized, to be employed where they are most needed. I think we are justified in speaking of this as a democracy of credit. Credit is at the disposal of every man who can show energy and assets. Each region of the country is set to study its own needs and opportunities and the whole country stands by to assist. It is self-government as well as democracy.

I understand why it was not possible at this session to mature legislation intended specially for the development of a system for handling rural, or, rather, agricultural credits; but the Federal reserve act itself facilitates and enlarges agricultural credit to an extraordinary degree. The farmer is as much a partner in the new democracy of credit as the merchant or manufacturer. Indeed, special and very liberal provision is made for his need, as will speedily appear when the system has been a little while in operation. His assets are as available as any other man's, and for credits of a longer term.

There have been many other measures passed of extraordinary importance, for the session has been singularly rich in thoughtful and constructive legislation; but I have mentioned the chief acts for which this Congress will be remembered as very notable, indeed. I did not mean when I began to write to make this letter so long, and even to mention the other legislation that is worthy of high praise would extend it to an inordinate length. My purpose in writing was merely to express my own great admiration for the industry and the leadership, as well as the wisdom and constructive skill, which has accomplished all these things.

I wish I could speak by name of the many men who have so honorably shared in these distinguished labors. I doubt if there has ever been a finer exhibition of teamwork and of unhesitating devotion to the fulfillment of party pledges—and yet the best of it is that the great measures passed have shown, I venture to say, no partisan bias, but only a spirit of serious statesmanship. I am proud to have been associated with such men, working in such a spirit through so many months of unremitted labor at trying tasks of counsel. It has been a privilege to have a share in such labors. I wish I could express to every one of the Members who have thus cooperated together my personal appreciation of what he has helped to do. This letter may, I hope, serve in some sort as a substitute for that.

I look forward with confidence to the elections. The voters of the United States have never failed to reward real service. They have never failed to sustain a Congress and administration that were seeking, as this Congress and, I believe, this administration have sought, to render them a permanent and disinterested benefit in the shape of reformed and rectified laws. They know that, extraordinary as the record is which I have recited, our task is not done; that a great work of constructive development remains to be accomplished, in building up our merchant marine, for instance, and in the completion of a great program for the conservation of our natural resources and the development of the water power of the country—a program which has at this session already been carried several steps toward consummation. They know, too, that without a Congress in close sympathy with the administration a whole scheme of peace and honor and disinterested service to the world, of which they have approved, can not be brought to its full realization. I would like to go into the district of every Member of Congress who has sustained and advanced the plans of the party and speak out my advocacy of his claim for reelection. But, of course, I can not do that, and with so clear a record no Member of Congress needs a spokesman. What he has done speaks for itself. If it be a mere question of political fortunes, I believe the immediate future of the party to be as certain as the past is secure.

The Democratic Party is now, in fact, the only instrument ready to the country's hand by which anything can be accomplished. It is united, as the Republican Party is not; it is strong and full of the zest of sober achievement, and has been rendered confident by carrying out a great constructive program such as no other party has attempted; it is absolutely free from the entangling alliances which made the Republican Party, even before its rupture, utterly unserviceable as an instrument of reform; its thought, its ambition, its plans are of the vital present and the hopeful future. A practical Nation is not likely to reject such a team, full of the spirit of public service, and substitute, in the midst of great tasks, either a party upon which a deep demoralization has fallen or a party which has not grown to the stature that would warrant its assuming the responsible burdens of state. Every thoughtful man sees that a change of parties made just now would set the clock back, not forward. I have a very complete and very confident belief in the practical sagacity of the American people.

With sincere regard and admiration,

Faithfully, yours,

WOODROW WILSON.

Hon. OSCAR UNDERWOOD,
House of Representatives, Washington, D. C.

OCTOBER 17, 1914.

MY DEAR MR. PRESIDENT: I write to thank you for your letter commending the work of my colleagues in this Congress. It is a great pleasure to us all to know that the hard work of the past 18 months in carrying out the policy of your administration meets with your cordial approval.

I am sure that I can say for my colleagues, as well as myself, that, although we have striven earnestly to keep our promises to the people and write on the statute books legislation in keeping with the progressive spirit of the times, we feel that it is largely due to your magnificent leadership that we have accomplished in one Congress more remedial legislation in the interest of the American people than has been accomplished by legislation in several decades before this Congress met.

We can not expect that the reforms inaugurated by your administration will immediately demonstrate their worth. After a law is on the statute books, it takes months and often years before the sentiment of the country adjusts itself to the new conditions; but I feel sure that time will prove that the legislation which has been enacted at this Congress is the beginning of a new life for our Nation. We have opened the way to fairer business conditions and established on a firm foundation individual liberty and business freedom for our people. I believe we can now look forward to an era of peace with all foreign nations and prosperity for our people at home as the crowning success of your great administration of the Government of our country.

With kindest regards, I am,

Cordially and sincerely, yours,

O. W. UNDERWOOD.

Hon. WOODROW WILSON,
President of the United States.

Leader Mann Tears Mask from Benevolent Assimilation.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, October 12, 1914,

On the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands.

Mr. BAILEY. Mr. Speaker, let me hope that it is not altogether presumptuous on my part in this connection to congratulate the minority leader [Mr. MANN] on the courage and candor he has shown in declaring what no other important member of his party has ever had the frankness to declare. There are other Republicans, perhaps, who are as able as this able gentleman. There are others who speak or have spoken with equal or perhaps greater authority. But to him it has been left to speak the word that hitherto has been unspoken. It has been left to him to tear off the mask of benevolent assimilation and imperialistic altruism and reveal the actual purpose of his party in connection with the Philippines, a purpose all others have carefully disavowed or have as carefully concealed.

What is that purpose? To relinquish our sovereignty over the islands? To accord to the Filipinos a right which for 16 years we have disregarded? To abandon our adventure in British colonialism? To help the "little brown brother" to establish in the east a new beacon light of liberty and self-government? Oh, no. No such purpose as this possesses the Republican Party. At least no such purpose possesses the

brilliant, resourceful, and prodigiously industrious leader of the minority. With a candor all too rare among his followers, this capable leader flat-footedly commits himself, as perhaps he commits his party, to a permanent stay in the Philippines and to all that a permanent stay would mean. He has no notion of hauling down the flag. It is no part of his program to relinquish the sovereignty which we have set up in that distant archipelago by force, if not by fraud. In cold, clear, and unreserved language he goes on record in favor of holding the Filipinos in bondage to the great Republic of the west, world without end.

And why is the gentleman from Illinois so determined in his support of the imperialistic idea? Why is he so bent on retaining the Philippines in spite of the disinclination of the Filipinos and in spite of all the professions of his party hitherto? It is merely because he has fallen a victim to William Randolph Hearst and RICHMOND PEARSON HOBSON, has become obsessed with their professed dread of the yellow peril, has surrendered to the doctrine that trade is war, and has conceived the grotesque notion that when the "sleeping giant" in China shall awake it will be with an insatiable desire to gobble up the west and destroy western civilization in a mad race for commercial supremacy.

The gentleman from Illinois is at least faithful to the economic creed which he has adopted and which he has promulgated so assiduously for so many years on this floor and elsewhere. The whole structure of protection is grounded on the theory that in every trade one must gain and the other lose. That buying and selling are reciprocal is not in the economic dream book from which the protectionist draws his inspiration. No superstition since the world was begun ever went further than this of protection in obscuring the vision of those under its curious spell. And so the gentleman from Illinois takes a long look ahead through the haze of this superstition and he sees looming on the horizon of the future a most dreadful apparition, nothing less, in fact, than an awakened China going up and down the earth like a roaring lion seeking whom it may devour.

Of course it has not occurred to the minority leader, nor will it occur to any of those similarly obsessed, that perhaps by the time China wakes up the rest of the world will have so aroused itself that it will no longer rely more on dream books and on economic soothsaying than on common sense and common experience in the every-day affairs of life. No merchant in Chicago, no manufacturer in Philadelphia, no mine owner in Michigan or Montana or Colorado, thinks of trade as war in the sense that the gentleman from Illinois implies it in forecasting the future of the Orient and the peril it presents to our own civilization. Every man engaged in commerce or industry knows that his success depends upon the friendly relations which he is able to establish. He seeks trade by means of favor. He courts those who may become his customers. He does not threaten them, nor does he arm himself against their approaches. He even invites them to travel at his expense to his factory, his mill, his warehouse to inspect his goods, to learn his methods and to acquaint themselves with the advantages which he has to offer. Nor does his competitor get a gun and ambush him. There is sharp rivalry for the customers both hope to gain. But neither builds forts or arsenals or battleships. Each knows that his surest success lies in rendering service for service and in widening the sphere of good will.

Mr. Speaker, the thought in which I rejoice is that it is not China alone which is shaking off the torpor of the ages. If she is awakening, is it not equally true that we ourselves are clearer of eye and less sluggish of mind than we were in that day not so distant when another, if less brilliant citizen of Illinois wished with all the fervor of his great protectionist heart that this country were surrounded by a sea of fire, so that no ship could reach our shores with the pauper goods of other countries? Yet, is the leap from John A Logan to JAMES R. MANN so very great? Are they separated in thought as widely as they are in time? What obsessed the brave general in his day seems equally to obsess the minority leader of this day. The obsession varies only in the form of its expression. Both regard trade as essentially a species of warfare and each would arm with guns and battleships to defend the United States against those who would exchange their products with us. If this is not the logic of the minority leader's remarkable speech the other day, what is the logic of it? No other possible interpretation suggests itself. The yellow peril which haunts the dreams of the gentleman from Illinois is only our old friend, the pauper labor of Europe, stalking in a new guise to affright the timid and to serve as a bogy man for infant industries.

Cotton Crisis—Its Remedy, Both Temporary and Permanent.

REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 19, 1914.

Mr. MURRAY. Mr. Speaker, I desire to discuss the problems of the cotton farmer, the crisis with which he is now confronted, and some of the remedies proposed. In the beginning, however, I desire to state that since the first days of August, or shortly after the beginning of the European conflict, it dawned upon the American cotton producer that if this struggle continued a great crisis in the cotton-growing industry must needs be met. Shortly delegations of farmers—and for the most part representatives of the farmers' union—from all the cotton and tobacco States, led by Charles Barrett, of Atlanta, as president of the National Farmers' Union, came to Washington to urge upon the Congress some emergency legislation to meet an extraordinary condition. Some of us have met on an average of every other night in some conference or other with a view of solving this vexatious problem. I have personally been present at all such meetings, including conferences with farmers' delegates and Members of Congress at the assembly room of the National Hotel, together with them before the Banking and Currency Committee of the House, which has ever maintained an unsympathetic attitude, if not a hostile one, toward any remedy whatsoever, also in a hearing before the Secretary of the Treasury and the regional reserve board and with the President, and also in the meeting with southern governors and Members of Congress.

At last it was thought wise to call a conference of all of the Representatives in Congress from the cotton and tobacco growing States. This was held on Wednesday night, October 7, there being present 83 Members of Congress, which organized by electing a chairman and secretary, and I had the honor to be chosen chairman unanimously by that conference. At length a resolution was adopted authorizing the selection of a committee, to consist of the chairman and one member from each cotton and tobacco growing State, to be selected by the chairman. As chairman I appointed the following committee:

R. L. HENRY, Texas; E. W. POU, North Carolina; K. D. MCKELLAR, Tennessee; H. D. STEPHENS, Mississippi; D. E. FINLEY, South Carolina; E. W. SAUNDERS, Virginia; D. M. HUGHES, Georgia; T. H. CARAWAY, Arkansas; SCOTT FERRIS and WILLIAM H. MURRAY, Oklahoma; J. J. RUSSELL, Missouri; J. B. ASWELL, Louisiana; A. W. BARKLEY, Kentucky; CARL HAYDEN, Arizona; J. T. HEFLIN, Alabama; DUDLEY DOOLITTLE, Kansas; EMMETT WILSON, Florida; WILLIAM KETTNER, California, all of whom were present in the preparation of the bill except the five last named.

On Thursday, October 8, this committee, after an entire day's discussion and deliberation, drafted a bill which obviated the objection urged against a "direct" loan by the Government by providing for Government funds to be loaned by the banks with the rate of interest limited to 4 per cent, in the form of a "directed" loan; and to obviate the objection of the eastern charge that we were attempting to issue "inflated" currency, the bill was drawn so as to provide either for currency or for the sale of Panama bonds, or both, not to exceed $250,000,000. There are now left over unsold of these bonds an aggregate amount upward of $240,300,000 at par. This bill was reported to the congressional cotton conference by Representative RUSSELL for the committee. After two substitutes were offered, followed by heated and prolonged discussion, the bill as drafted by the committee was indorsed, which I introduced on the following day.

I stand for the bill No. 19200. It will solve this cotton problem. There is perhaps money enough, as there always has been, in the South to "move" the cotton crop when turned over and over again by purchase and sale and resale; but there is neither now nor ever has been enough money in the South at crop-moving season to hold the crop or take from the market any great amount of the crop. Money the banks may have they can not afford to loan on long time, probably for a term of 18 months, with which to hold cotton, in view of their deposits and outstanding obligations, because the first duty of a bank is the protection of its depositors; and if they were to exhaust every dollar of their surplus in loaning to hold cotton, it would amount to very little more than the "buy-a-bale" movement, and that will not reach the remedy. None of these remedies, nor all of

them, will solve the problem; nor will ever so much money aid the real farmer, the man who does the work, unless the interest is held to the lowest possible rate, which in this bill we fixed at 4 per cent.

GOVERNMENT AID.

The Government aids the cotton producer for the purpose of production only and has for many years, by making great appropriations for experiment, for seed, and by sending lecturers and demonstrators throughout the cotton belt. Why can not the Government lend its direct aid to finance and market his crop? Why are we met with the charge that this is "paternalism" in government, when the Government has been just as paternalistic in other instances? In this bill there is not a single thing proposed but what has been done in the past. When the Ohio flood came, something like a year ago, and a run was made upon the banks at Dayton, Ohio, the Secretary of the Treasury announced that he would deposit $2,000,000 of currency in the Dayton banks and that he would accept commercial paper as the basis of this currency, and not confine it to bonds—a stretch of the law—and upon that announcement he sent $180,000 to the Dayton banks, and this rendered it unnecessary to send the two million, since this action stopped the run on the banks and saved them from a crash. Just recently Secretary McAdoo placed $1,400,000, half enough to relieve the cotton farmer, in the Park National Bank, of New York, as a depository, with an instruction that this must be loaned to the State of Tennessee, with restrictions upon the security to be accepted. This is a "directed" loan, just as we have provided in this bill, in that we have directed that this money of the Government shall be loaned only to the producer of cotton or the owners of the land upon which it is produced, using it as a basis for currency or—in the case of a sale of the bonds—for security, the only difference being in the class of security and the personnel to which the money is to be loaned; and why should not this benefit of the Government be extended to the farmer just as it was extended to the Park National Bank? All the difference in the security is in favor of this bill. Commercial paper authorized under the Aldrich-Vreeland currency law and in the regional reserve system is certainly not so safe as cotton itself. Cotton is the most stable of products. I presume a loan to a corporation is not "paternalism," while to loan to a farmer is.

COTTON THE MOST STABLE PRODUCT.

After it is ginned and put into the bale it may be thrown into the weather and receive the rain without perceptible deterioration, and times in the past it was the only product by which we could keep the gold reserve, upon which all our money is based, and has always been the only product upon which a balance of trade in our favor has been maintained.

There are those Members of Congress, honest no doubt in their view, who maintain that this would be special legislation. In this they are mistaken. Unless the cotton farmer of the South can sell his product he can not buy the goods from the New England manufacturer, the corn from the Dakotas, Nebraska, and Illinois, the wheat from the wheat plains of the North and West; and without this cotton the New England spinner would be shut down and the laboring man thrown out of employment. It is not a sectional, not a class, not a local problem. Cotton becomes a national problem, and in keeping up our gold reserve an international problem. Driven to the wall on this argument we are confronted by some of our eastern friends with the statement that we ought to "diversify"; that we ought to "quit raising so much of it." In this they display at least an ignorance of fundamental economic problems. The South can not quit growing cotton for any length of time without quitting it forever. I might with the same degree of sense, or rather lack of sense, ask New England, when she urges a protective tariff, "Why do not you quit your manufacturing business? Why do not you close your mills?" The production of cotton as the one crop in the South is an economic and sociological problem which recognizes the law of nature and "survival of the fittest," and exists in the South for the same reason that wheat is grown in Minnesota and corn in Iowa; and just here I might stop to discuss those more personal relations of the cotton farmer, which, however well understood in the South, has never been understood in any State that does not produce cotton.

PROBLEMS OF THE COTTON FARMER.

I am sure an explanation of the cotton farmers' troubles will be of interest to you men of the North and East and will aid in bringing you to his assistance. The personal problems of the cotton farmer are three—its making, its marketing, and its financing—and he must have aid in all the three. The average cotton farmer, the man who does the actual work, can not alone do either without aid. His interest, though not a personal problem, is also involved in the transportation of his crop to the markets of the world, in an American merchant marine, although few of them realize this fact. The actual labor of producing the cotton of the South is performed not by the landowner, but either by a tenant system or share cropper or by labor employed by the landowner, but for the most part by tenant and share-crop system.

And I now make this explanation of the personal troubles and the mode of life of the cotton farmer because of a statement made by the United States commission to investigate European rural credits, wherein the statement was made, notwithstanding two southern Senators, one from my own State, signed this report. The report says:

> The average European farmer works his entire family in the field, but this is rarely seen in America.

The facts are it is the exception to see any other rule all over the cotton belt.

The landowner grows something else, and if he rents land he lets his tenants grow the cotton because of the great cost of production. Remember, in producing cotton the land must be prepared with extreme care, particularly as to seed bed and its absence of trash, the seed of which alone costs from 75 cents to $1 an acre, and sometimes, as in this present crop, the seed becomes destroyed and requires the second and even the third planting, adding all the time to the expense. Then it is either "barred" off by throwing the dirt toward the middle or "runaround" with a sweep, and it is then "chopped out"—that is, all the grass and weeds and the cotton, as it must be planted so thick that it has from 20 to 100 times as many stalks as is ever retained on the land—to a partial stand, leaving one or two stalks every foot or so in the drill. This "chopping" is more tedious and more expensive than hoeing corn. Then it is plowed, and plowed again. In fact, when you have plowed corn three times you will have plowed cotton seven, eight, and nine times, and almost surely you will have to give it another hoeing. Then you are ready for it to grow, mature, and fruit, preparatory to gathering, which we call "picking." It will thus be seen that it is the most expensive of crops in the matter of production. Then in the month of August comes the crucial period. It may in July look like it will make a bale to the acre—this is more than double the average—and by the 1st of September show really that it would not make an eighth of a bale, and vice versa, either because of hot winds or insect pests or too much rain, so that it becomes axiomatic that "August makes the cotton crop," except in the extreme South, where the month of July is the crucial period. Then "picking" comes, which means the pulling of the three to five little locks containing the lint and seed from the boll, which has burst forth by maturity and the sun. This costs all the way from 50 cents to $1.25 per 100 pounds in the seed, which means after ginning but scarce one-third this amount of lint, or from $8 to $20 per bale to "pick it," so that cotton at 6 to 7 cents—$30 to $35 a bale—is worth half of it to "pick" it. Now, "theorize" the profit out of this, if you can, to the grower. He gives to the landowner one-fourth as rent, he gives to the picker one-half for picking, leaving him one-fourth for the work in the spring, his seed, "chopping," plowing, and cultivating. Has he a profit? He has not living wages.

I make this explanation of the conditions of the southern cotton farmer, and of the expense of producing it, to remove the prevalent opinion of the North and East that the southern cotton farmer is already too well paid, and to show the North and East that at best prices he makes but a meager profit. The tables I shall later call attention to, showing the production and acreage and price of cotton for the past 100 years, will disclose the fact that prior to the Civil War cotton sold at from 10 to 12 cents and at that time the cost of living was less than half what it is to-day. Then there was a profit, due also to the fact that the Southern States used their credits and resources, and particularly cotton, with which to finance and market their crop, and they could do this again but for the prohibitive 10 per cent tax on State-bank currency.

FINANCING THE CROP-MAKING.

In the case of the employment of labor to make a cotton crop it will readily be seen that the landowner could not balance his ledger. He would not have enough to pay taxes on his land. In the case of the share cropper, who gives one-half for the rent, he is out all of his year's work in producing this crop for his profit. In the case of the tenant farmer, he has practically done the same, which includes the work of himself, his wife, and his children. Remember, again, that the average tenant cotton farmer—he gives one-fourth of the crop as rent for the use of the land, but furnished everything else—and the "share cropper"—who gives one-half of the crop for the use of the land, the mule, tools, feed, and seed—works not only himself but his wife and every child able to walk. It is no uncommon thing in the fall of the year during the picking season or

in cotton-chopping time during the spring to see every member of the family either with a sack over his shoulder dragging it down the row "picking" cotton or in the spring with a hoe, and those who are too young to walk are sitting at the end of the row in the shade of a stump or under the cotton wagon where the water jug is kept until the pickers—or choppers—make the round. These two classes are divided, according to the States, into two other classes. In States like Mississippi and Louisiana the most of the share croppers, and perhaps all of the laborers, consist of negro labor trained to no other work, whereas in States like Oklahoma and Texas the tenants for the most part are white men. But in either case their training and tradition, their environment and heredity, run into the one-crop faculty, to wit, making cotton; and to change this training becomes a sociological problem—a slow growth through training, which it takes a long period of time to accomplish. There are other impediments in the way of a homeless man to do this. Hence we might as well ask, "Why do not you put the hands in the New England textile mills upon the western wheat farms and shut the mills down?" I know what your answer would be to that; but the same answer is involved in the production of cotton in the South. You have too much money invested in your machinery, just as we have too many compresses, too many gins, too much other cotton-making improvements upon every farm in the South all at once to quit the growing of cotton; and should we quit, it would not only be temporary misery to the South but permanent bankruptcy to the East and North. We can not tell what will be the result of this struggle. We may be driven by the neglect of the Government and you men of the North and East to abandon cotton producing, which will in the end be best for us, although disastrous to you. But in the wake of that changed industry hordes of negro laborers in the South who have no other kind of industrial knowledge would hie away to the cities not alone of the South but of the Middle States and of the North, becoming a horde of irresponsible vagabonds, and driven by extreme necessity, a menace to society. In the end a new class of labor would be brought into the South. Changed conditions would follow that would enable us to work out our salvation much easier than New England could work out the problem of getting raw cotton with which to operate their mills and keep their labor employed. Then the dilapidated old cotton gins and cotton compresses would be but monuments to the neglect of this Government, and coequal as such with the smokestacks and chimneys of the New England mills long abandoned as monuments to the folly of the North and East, as well as that of the Government itself, in their failure to aid us to help the cotton farmer or to permit the cotton States to take care of themselves, by giving the farmer a separate financial system and by repealing the 10 per cent tax on State bank currency.

COTTON FARMING A MORTGAGE SYSTEM.

But just a word more as to the farmer's financing his crops. The average tenant farmer invariably makes his crop under a "mortgage," either at the store or at the bank. The less favored ones are obliged to make it at the "credit store" to get supplies—foodstuffs, clothing for his family, and oftentimes feed for his stock—by mortgaging his team, plow tools, and the labor of himself and family upon the crop the following season may bring forth; the merchant undertakes the hazard of carrying him for 12 months, and in order to enable him to do so the profit on his goods must be more than double cash prices. Those tenants who are a little more fortunate are enabled to borrow money at the banks, if their landlords will sign their notes in addition to their putting up their all. In these cases their rate of interest is less than the profits at the credit store, for the reason that the risk, because of the landowner's personal security or the ownership by the tenant of more property, is less hazardous and the payment more probable; but even this class pay interest ranging from 18 to 36 per cent per annum, and this brings to mind another folly of our Government.

RURAL CREDIT SYSTEM.

This brings to mind the fundamental folly of our statesmanship in attempting to force the farmer into the same banking and currency system as provided for the commercial world, and in this our Nation is the only well-developed nation of all the civilized world attempting this course. The farmer can not compete with the commercial world in a commercial system of banking. A wise commercial system of banking presupposes personal security and short-time loans—in itself meaning a higher rate than on long-time loans—with their resources and securities placed in the form of legalized "commercial paper" at the bank for the issue of currency as well as for credit, while the farmer can neither furnish the personal security nor operate on a short-time loan. Ordinarily he should have 18 months or two years' credit with which to make and market a crop—and in the improvement and purchase of a home he may need 20 or 40 or 60 years—and because of the lack of this system, although found throughout Europe, and because of this folly of our Government in an effort to hug the elusive phantom of "nonpaternalism" we have created throughout this Republic by sure but certain growth a tenant system that some day will haunt and plague it, and until we adopt a separate financial system whereby the farmer may have as long or as short a time as he may choose in which to buy or to improve a home and at the same time give his resources like currency value as given commercial paper, but in a separate system as basis for his currency and credit, will the farms of America continue to degenerate, cost of living continue to soar, and finally underproduction and social revolution follow.

Our national policy in banking and currency seems to have been founded upon the principle that our soil and climate are only suited to manufacture and commerce, and that it would be a waste of governmental energy and of statesmanship to attempt to make our Nation feed itself. For the farmer to attempt to place his resources alongside of the balance of the world in a banking and currency system now becoming as centralized and under a control as supreme and plenary as the monarch of a great empire leaves them just as helpless as the minority stockholders in a corporation, and the same is true of all enterprises in all agricultural States of this Republic in their financial struggle. I shall discuss this in greater detail when I come later to discuss its corollary—"Ten per cent tax on State banks."

CAUSE OF NO DIVERSIFICATION.

This is due primarily to a tenant condition, and this tenant condition is due to a lack of a rural credit system and a separate system of agricultural finance from commercial banking and finance, as well as the sociological condition of our people. The sociological condition can not change until the tenant conditions have changed, and these tenant conditions, in turn, can not change until they have a separate system of finance, with long-time loans at a low rate of interest. These things are as axiomatic as the right of men to life, liberty, and pursuit of happiness.

EMERGENCY LEGISLATION.

In this crisis the wise legislator ought not to stop to interpose the objection of "paternalism" or any other theory of government, nor call for "precedent"; and, indeed, no objection save and except alone the clear inhibition of the Constitution of the United States should be raised when a crisis of this kind confronts us, and there is not a man here that can point to any clause in the Constitution that renders any portion of this bill unconstitutional. A crisis like this requires heroic remedies, and if there be no precedent let us make a precedent. Men may say that governments were not instituted to give aid to agriculture, however dire its calamity, and I reply, nor was government created to look after tourists in foreign lands in the event war may arise; but necessity compelled us to appropriate millions of dollars to bring home men and women unexpectedly stranded in foreign lands, and news dispatches inform us that the representatives of the State Department had great trouble to separate some of these good ladies from their pet poodles, which were left on the shores of Belgium. Perhaps it would have been wisest to have reversed the order and brought the dogs back; and yet I am sure there are men who would look with greater favor upon our now making appropriation to rescue these pugs and poodles from Europe than to rescue the cotton farmer, his wife and children, from the dire calamity which this war has brought upon him.

Nor was the Government created to feed the people, and yet we appropriated $200,000 to Salem, Mass., because of a fire, and which was doubtless due to their own negligence in the laws of their own town governing the construction of buildings; just as we appropriated $1,000,000 for the San Francisco earthquake sufferers; just as we appropriated $100,000 to bring back to our shores men who had voluntarily gone to Mexico for settlement; or $2,000,000 for tourists sight-seeing in Europe.

Nor is it one of the functions of government to engage in the insurance business, and yet this very Congress, upon the advice and recommendation of the President, has provided for the establishment in one of the bureaus of the Government of a marine insurance policy to insure merchant ships against war risks, the most hazardous risk that can be imagined just at this time, and which may cost us millions of dollars. Although this policy is a violation of the functions of government, I nevertheless most heartily approve of it as an emergency to meet the situation that confronts our foreign trade and commerce; but when our economic safety is threatened, the objection that it is "paternalism" is removed. For without such insurance no

shipowner would undertake the risk of subjecting his cargo and property to the danger of belligerent nations. No private insurance company would undertake the hazard, and hence the Government did, for without such insurance none of our farm products or manufactured articles could be carried to foreign ports or markets. This would have proved a more aggravated stagnation of our own business by causing the closing down of our manufacturing plants and the fall in price of all products of the farm, and therefore, although this insurance provided by the Government will surely subject the Government to loss, nevertheless in the end it will mean the saving to our own people of millions of dollars by providing transportation to a foreign port, but in principle is "paternalism," yet wise. Now, no bank can afford to finance the farmer, and therefore the Government must do it. In the case of our citizens going to Mexico and the tourists to Europe they themselves were responsible for the condition in which they found themselves, and yet the Government came to their aid—"paternalism" again. The farmer is not responsible for the war nor for the present crisis which creates no demand from abroad for his cotton, and, like the shipping industry, an emergency has arisen which neither the farmer nor any individual can meet, and therefore it is right and wholly proper for the strong arm of the Government to save its citizens from bankruptcy and ruin by the enactment of the bill prepared by the congressional cotton conference I hitherto recited. The Government can not sustain loss, nor will it be subject to any great hazard, such as it will in its policy of marine insurance on war risks. We have not hesitated to appropriate money—an absolute gift—to Salem fire sufferers, just as some years ago the Congress made a like gift of $1,000,000 to the earthquake sufferers of California. What is the distinction between this gift and the aid thus requested for the cotton farmer? The distinction is only this, that in the case of the cotton farmer the money will be returned to the Government, while in the other cases enumerated all the people of the land must return it in the form of taxes.

The argument of some gentlemen as to the powers of government would lead us to believe their contention to be that no money ought to be paid out of the Treasury except to compensate some public officer. I say to you this is one of the least justified uses of public money, and if government can not come to the rescue of any class, and particularly that class who feed the world, who fight all the battles of the world, and upon whom the greatest burden of civilization must needs always rest, then it is not a wise and just government. Then has come the proper time to dissolve the social compact into its original elements and to found a new government upon such forms and under such principles as will meet the ends for which government was created. You interpose the objection "paternalism." Granted that it is even so; but we have, in the payment of pensions, the drainage of swamp lands, the irrigation of the arid lands of the West, the appropriation to suppress the foot-and-mouth disease of the New England States and the cotton-boll weevil of the South, extending aid to European tourists, aiding sufferers from flood, fire, pestilence, and drought, and numerous other ways, already entered upon "precedents" of "paternalism." Do you say that this is not the function of government? What is the function of government, anyway? My conception of government is that government began when the citizen could not aid himself and that government was created to do any and all things for the people which they can not do for themselves; that its purposes is, by mutual aid and assistance and by their combined strength, to provide for mutual defense and protection; to alleviate the hardships of the people, or any portion of their number; to serve the people and make them prosperous and happy. If this is not the end for which government was created, then we have no need for it. If our Government will not permit of this, would it not be the part of wisdom so to change it that it will permit of such mutual helpfulness?

PICKPOCKETS OF COMMERCE.

It is just such a crisis as this that the strong can, under legal form, rob the weak. Always in times of war the crook and the pickpocket has full immunity to pilfer and steal; calling himself the "home guard," he is free to rob his neighbors or, like a thief, picks the pockets and pilfers the dead and wounded upon the battle field. Just so with great financial crises the thieves and pickpockets of commerce take advantage of the man least able to take care of himself, and the thieves and pickpockets among every class will take advantage of just such times as these. This should not be permitted; but only the strong arm of the Government can prevent. Gentlemen may interpose the objection that to do so violates "precedent" and is "paternalistic," but we should prevent such wrongs, if it requires the making of a "precedent" or the adoption for a little while of a bit of "paternalism."

EXPORTED COTTON DEPENDS ON SURPLUS.

It will be shown that in 1893 there was produced in the United States, in round numbers, seven and one-half million bales of cotton, the average price was 7½ cents, and the export of cotton for that year was 5,307,000 bales; while 20 years afterwards, to wit, in 1913, there were more than 14,000,000 bales produced, with an average price above 13 cents a pound, or nearly double the production with nearly double the price; while in 1911, the largest production year in our history, there were 15,600,000 bales produced in the United States and there were exported more than 10,000,000 bales. It is true that while the European war continues the foreign demand for raw cotton will be greatly limited; but the war can not last so long as to render this surplus valueless, and then there will be an increased demand, if the product is in existence for use. Moreover, I call your attention to the fact that twenty-odd years ago Japan took no cotton from us. To-day she takes a half million bales, with a constant annual increase in that demand. We taught the Japanese how to make and eat bread. Up until the opening of the ports in 1863 they lived on tea, fish, and rice. Now she takes millions of bushels of our wheat and has established in Japan several large flouring mills. China is making like strides toward the use of our products, and has begun to use our cotton, and bids fair to make a greater progress in the next 20 years than has Japan in the past 20; and if she does, 20 years from to-day, because of her great population China alone will demand the present cotton production of the United States. With the opening of the Panama Canal, with wise shipping laws and a greater American merchant marine, the logic of events would indicate that 20 years from now the world will demand 30,000,000 bales of cotton, and when the world demands it, or 50,000,000 or 75,000,000 bales, the South can produce it, and this increased demand from the present growth must inevitably follow if we do not invoke an unsound economic policy of trying to destroy the cotton production in the South. The fact that there is a surplus from year to year only will give a greater guaranty to the industries in foreign lands who demand cotton. There must be that constant surplus to insure constant foreign increase in the use of cotton. Spinners have no use for idle mills. Spasmodic production would prove unwise and tend to check such constant demand.

The abnormal surplus during the entire decade from 1890 to 1900, while causing the lowest price of cotton in our history, nevertheless also had its compensatory result in this—it made possible a demand for double the world's use of cotton in 20 years.

We must give foreign spinners abiding faith in our ability and willingness to produce ample supply of the raw cotton if we would expect them to increase their capacity. This is why they called for 10,000,000 bales of the stupendous production of the year 1911. British spinners realized this in their recent proposal that the Governments of Great Britain and of the United States should form some kind of cotton pool to take from the market every year any surplus and hold it for the years when needed. Therefore, from this standpoint, it is economically unsound in the final analysis, for the future prosperity of the cotton grower, to attempt abnormal reduction of the crop. True enough, such reduction now would tend to raise the price of cotton, but in like proportion would it reduce the demand in the years to follow to such an extent that even in the times of peace we would suffer from low price of cotton. The only wise solution is to take from the market enough cotton to bring up the present price that spinners in foreign lands may know that when they are ready to pay a fair and equitable price the raw cotton can be had. Why is this not a governmental function?

ENGLISH SPINNER'S VIEW.

Just to show you the foreign spinner's view, permit me to quote from a letter to A. S. Terrell, of Chicago, written on August 31 by Sir Charles Macara, president of the International Federation of Master Cotton Spinners and Manufacturers' Association, who is considered the highest authority in England on the cotton industry and whose opinion is regarded as the last word upon the subject. He says:

The purpose of this letter is to confirm to you the statement made by our secretary on Saturday that it would be a great calamity if, owing to the European war, the cotton farmers of the United States of America were ruined. Their ruin will certainly be brought about unless steps are taken by the Government of the United States of America, in combination with large financial houses, to hold back several million bales of cotton. It must be borne in mind that if the war lasts longer than the end of this year there will be a surplus of American cotton of some 5,000,000 bales; and this must necessarily have a depreciating effect on the price of American cotton. It is neither to the interest of the cotton spinners of the world nor to that of the United States of America as a nation that the price of cotton be reduced to such a low level as, say, 6 or 8 cents.

I recognize more fully than perhaps anyone else the very serious situation, having—in consequence of my various public positions, and especially as president of the International Cotton Federation—been obliged to give a very close study and attention to the question of the

cotton supply. On the occasion of the tour of 120 cotton spinners and manufacturers of all nationalities which I led in 1907 through the cotton-growing States of America it became evident to me that in years of exceptionally large cotton crops it would be in the interests of the millions of cotton producers and cotton-mill operatives that a scheme for properly packing and warehousing the surplus cotton crop should be initiated, and in view of the certainty that there will be an enormous surplus in this year's American cotton crop such a scheme undertaken by the Government of the United States of America would be a safeguard against dire calamity.

I trust you will submit this letter to President Wilson, who, I am sure, will share my opinion.

There is another side to this question. The wheat farmer in the North will get not only a better price but more in the aggregate for his wheat produced there alone than could be had for the entire production should the South engage in the production of wheat. So a sound reasoning impels us to the belief that the corn grower and the wheat grower of the North and West are vitally interested in the increased production of cotton in the South, that they may raise the wheat and corn.

BEST INTERESTS OF THE MANUFACTURER AND PUBLIC.

Therefore it ought not to follow because we have in this House from the South but 92 Members out of 434, and in the Senate but 22 out of 96, that our cause should fail. I realize that there are from the Eastern or manufacturing States in both Houses of Congress a membership equal to our southern strength, and that you gentlemen of the East imagine that you are interested directly in "panicky" prices for cotton and that such prices will aid your manufacturers; and I also realize that the grain-growing sections imagine that low cost of cotton means low cost of clothing, and that herein lies our difficulty in securing remedial legislation, but sooner or later you men of the East and North will be compelled to aid us in this relief. Personally, I do not think that any man from a cotton or tobacco growing State should vote for adjournment of this House until such relief is provided. Moreover, I say to you gentlemen from the manufacturing States, neither you nor your mills are interested in "panicky" prices of cotton. The mill owners are interested, first, in steady, sure supply of the raw product, and, second, in a stable price, whether that price be a low one or a high one, because by this assurance only can they with any degree of certainty calculate profits from the operation of their mills. Spasmodic prices, with cotton one year at 7 cents and another year at 18 cents, leaves the manufacturer with no method of determining to a certainty whether he shall sustain a profit or a loss, and in the end the consumer must pay higher prices for clothing, because free and wholesome competition, based upon accurate mathematical calculation, can not be made either in the manufacture or sale either in the wholesale or retail trade. It is all speculative, ending in the highest price to the public who buy clothes, and the lowest price for raw cotton. Under a plan I shall later on propose, which considers the possibility of eliminating the sharks and intervening speculator between the cotton grower and manufacturer, a normal and at the same time a profitable price to the grower of cotton can be determined. There is scarcely a year but what the manufacturer pays on an average of 15 to 17 cents a pound, and yet the farmer never receives this amount. All the way from $15 to $30 a bale, which is an unnecessary intervening speculation, are taken from the cotton grower on one side and from the consumer of cotton clothing on the other. A more direct relation between the cotton producer and the spinner would give the cotton grower not only a reasonable profit, but would at the same time provide in the end much cheaper clothing to the consuming public, for the reason that the manufacturer could with accurate calculation determine his profits and meet competition, while with spasmodic production all competitive prices are destroyed. There is no competition under such conditions.

TEN PER CENT TAX ON STATE BANKS.

While the passage of this bill, or one like it, is necessary to meet this emergency, I do not believe that a permanent remedy will ever come to the cotton grower or to the tobacco grower or to any other producer, whether of the field or of the mine of the United States, until the 10 per cent tax on State banks is repealed, whereby all these interests may take care of themselves.

In 1875 the Government, to give a market for the United States bonds and provide for the circulation of the national-bank currency, placed a tax of 10 per cent on all State bank currency, which stripped the South of the only power to take care of itself or use its own resources. In section 2, Article I, of the Constitution of the United States you find this language:

> No State shall * * * coin money, emit bills of credit, make anything but gold and silver coin as tender in payment of debts. * * *

Under this clause the State itself can not issue currency or use its resources, but it can authorize by law the State banks to do it but for this 10 per cent tax, which taxes it out of existence. Repeal this State bank tax and we will take care of ourselves without the aid of the Government.

I know the objection that will be raised against such repeal, and that it means "wild-cat" currency, but I submit to you that that tax could be modified to provide that such State bank currency as is based upon sound currency principles should be free from the tax, while all other kinds should be subject to the tax. This would obviate the danger of "wild-cat currency." I have proposed a bill to this effect, combining the principles of the Aldrich-Vreeland Currency Act and the regional reserve system, which would provide that no State bank issue should be subject to such Federal tax of 10 per cent when the currency authorized by the State law is limited to the amount of the capital stock of the bank and to three dollars of such currency to one of gold held in reserve for redemption, such as the old Scotch system, upon which such issue is based; or when issued to an amount not to exceed 75 per cent of the market value of any staple product of the farm, field, or of the mine, with 5 per cent of the issue in gold held in reserve for redemption, as provided for the currency under the Aldrich-Vreeland Act, with such currency further secured by the credit or guaranty of the State. Currency under those conditions would be sound. With that system not only the cotton States but the tobacco States, the copper States, and all others with a valuable product of either the mine or of the farm could use its own resources to finance its one product and make its production profitable to its own citizens without the aid of the Federal Government. The recent establishment of our centralized system, called the regional reserve banking system, makes it more necessary now than ever to provide for the repeal of the tax on State banks.

Although more centralizing than the old banking plan—it is centralized, however, in the Government—which the regional reserve system supplanted, it is, nevertheless, a wholesome system for commerce, as it will not permit the small enterprises to be strangled by the great "captains of industry." Yet to the farmer its benefits are nil.

This centralizing system, to use a political term, is monarchy or imperialism in banking. It is the English bank system, made necessary in the British Isles to have a "string" upon its colonial possessions, so as to guarantee the bringing to the British Isles raw products to feed their people and to supply their manufactures and give its labor employment, and at the same time give a return cargo of the finished manufactured product to their outlying colonies, thus supporting their commerce; but we never have and never can enter upon a colonial system. But I call your attention to the fact that since the establishment of the Bank of England, with its centralizing tendencies, there has been established in her colonial possession of Canada and elsewhere the old Scotch system of decentralizing banking—democracy of banking—made necessary for the Canadian people under their local condition to use their own resources in their commercial and economic struggle. I repeat again the establishment in America of this centralizing commercial system makes it necessary for the establishment of a decentralizing system by the use of State banks. The copper-producing States as well as the cotton and tobacco States, and, sooner or later, the wheat and corn States, will find themselves just as helpless in this new system as the farmer finds himself in attempting to finance his operations in a commercial system of banking, for the reason that with bonds, together with "commercial paper" and other like securities as the basis of currency as provided under the Aldrich-Vreeland Act and the regional reserve system, give the East, and particularly New York, the overpowering financial strength and control in this financial machine. The East holds the larger portion of these bonds and other securities. The East becomes, as it were, the British Isles in this centralized system of currency. It would be just like five men organizing a corporation with two of them owning 60 per cent of the stock. The other three are majority, but the two will control, elect the officers, fix their salaries, declare the dividends, and dominate the other three stockholders' property. The same will prove true of all the agricultural sections of this Republic. * * *

The East has bonds—our bonds; the East has the "commercial paper"—the paper we executed—and the other securities; these are the resources under our commercial banking upon which all currency is issued. While our resources of the South and West consist of products of the farm, the field, and the mine, they have no place under the law for a currency basis. Quite true, we may execute a new note to the East for money with which to carry on our operations, and in turn this note becomes in eastern hands "commercial paper," which in turn is made a basis for more currency to be loaned to us for more interest, and thus the endless chain goes on. Nevertheless, we have cotton, corn, wheat, tobacco, cattle, cop-

per, gold, silver, oil—all these things which are more valuable than our notes (they are prime necessities to civilized man), but of no currency value. Here is where we, the cotton grower and all farm enterprises, and all others of agricultural States, constitute the minority stockholders in this beautiful banking and currency system.

What can the cotton-growing States do, or even the grain-growing States, in a competition where their own bonds are owned in New York and where their own commercial assets are held by the large banks of the East, with only such commercial paper legally used as the basis of currency? The South has values it can not use. The only balance is to permit the issue of currency under a wise and sound State banking system upon assets they possess and using their resources in these States to finance their own operations independent of the centralizing regional reserve system, if the South or any other States of the West and North expect to survive.

I do not wish to be understood as here opposing the regional reserve banking system, but I am trying to point out that however wholesome it is to commerce, that in order to create a balance there must be, as has proven wise in the British system, provision for the decentralizing system. This balance is just as essential in banking and finance as a combination of national power with local self-goverment is essential for the preservation of our Republic. It can be neither all local nor all national. Just so in the banking system. Under the old law which this Congress repealed there was a centralization of money, credits, and finance in the hands of certain big banks and "great captains of finance." The regional reserve system did not decentralize these credits, but transferred to and combined them in the Government through an all-powerful board of seven men, and while I approve the regional reserve banking system as a commercial system, I contend that it does not by any means settle the problem of banking and finance. The final solution has just begun, and this new regional reserve system will but disclose the final exigencies which must be met in order to solve it in the interest of every section—the all-important question of banking and currency and mobilization of credits. Hence we have not solved it, but merely hastened the issue for final solution.

An objection is sometimes interposed to State banks by those who imagine we must have one uniform banking system. There can not be one banking system, and this is best illustrated by the establishment of State banks alongside of National banks in all the years past. There can not be even such a thing as a "uniform" money—no; not even a "national" money. There is and there should be a standard par dollar, and it would only facilitate commerce to have an international money. That standard may be made as you choose. Let it be, if you will, as it now is, the gold standard. Yet gold is not our "national" money, nor is paper, nor silver. The best illustration of this is found in the fact that here in Washington and eastward they have for the most part paper money, and you scarcely ever see a silver dollar, while the reverse is true in my State and all over the South and West, for the very reason that there can not be a "national" money that will circulate everywhere. Money itself is largely local in its functions, whether it be metal or of any kind of paper notes or currency. Hence the East, with its control of "commercial" paper and bonds upon which currency is issued has too much currency, while the agricultural States have not enough, especially during the crop gathering or moving period. Hence the wisdom of State banks to issue this currency in localities where needed at the proper time. So if you consider this question of banking from the standpoint alone of money or currency, all argument is in its favor.

SCOTCH SYSTEM OF BANKING.

This Scotch system to which I have referred, now in force in Canada, and which has been in force in Scotland for 250 years, is the same principle upon which the Missouri State Bank, the New Orleans Bank, and the Suffolk Bank of New England were organized, and there never was inflation of their currency. This system, in short, provided that all the assets of the bank should stand pledged for all the paper currency issued, and that the amount issued should be limited to the amount of the stock.

Second. That for every three dollars of such currency issued there must be one of gold in the vault of the bank for redemption, so primarily the currency was issued upon the amount of gold; and, second, upon its stock. This currency is then secured by at least its equal value to the assets of the bank—if it issued the maximum amount—plus one-third its amount in gold; and think how much stronger this would be if there be added the credit of the State.

Under this system the New Orleans bank currency was worth dollar for dollar in gold in the midst of the Civil War, when the Confederate note was worthless. The Suffolk Bank of New England stood up the same way even when the greenbacks went down to 47 cents on the dollar, and the Missouri Bank went out of existence, as did all the others, when the tax of 10 per cent was placed upon its issue in 1875, paying for its currency with gold dollar for dollar. No greater test could be made as to the soundness of a currency than in these tests of its proving solvent and worth equal value to gold in the midst of the Confederacy and in the juggling finances of our own Republic when the greenbacks went down. Suppose you add to this principle that which I have heretofore proposed—that every dollar thus issued should have the guaranty of the State government. Will any man refuse to accept it at par? Give the South this system and we can take care of the three personal problems of the cotton farmer, to wit:

First. The direct marketing of the crop.

Second. The financing of the crop.

Third. The withholding of cotton from a demoralized market.

All this in the end will prove wholesome also to the manufacturer and to the public who buy clothing. And how would I reach this

PERMANENT REMEDY?

By passing a law in each of the cotton States—just as the tobacco States could do for themselves, and likewise the copper or grain States—that the State bank in such emergency should be authorized to issue currency upon 75 per cent of the value of cotton, provided there should be kept in reserve 5 per cent of the issue in gold for redemption, and that the credit of the State should guarantee such currency.

Second. Provide for some State authority which, in conjunction with any other or all of the cotton-growing States, should fix the value of cotton just as absolutely as the New York and New Orleans cotton exchanges fixed the price of cotton, with an additional law that where cotton is selling below that fixed price the State bank shall be authorized to issue currency to 75 per cent of that value so fixed, with a limit upon that currency of the rate of interest for that particular emergency, with a further provision that all such cotton should be stored in bonded warehouses and insured, and that the receipt should pass title to the State or to the bank holding it in trust for the State, and that when that cotton reached the fixed price in the open markets the State fiscal agent could sell all or any portion.

Under such a system suppose the State of Oklahoma were to take off the market during a period of depression 20 per cent of its crop, or 200,000 bales, and that Texas and the other States did the same; suppose a manufacturer wanted 50,000 bales of middling or low middling or high middling, either one of these States would have this amount of cotton of such desired grade and it could be sold direct to the spinner without profit taking by intervening speculators; and thus at once the financing of the crop, the establishing of price, and the guaranty to the manufacturer of a comparatively uniform price would be at one and the same time solved.

I repeat again, give us this emergency bill we here propose, then provide for a rural-credit system for the farmer separate from the commercial system, repeal the 10 per cent tax on State banks to the extent I here propose, and we shall not bother the Federal Government whatever the future emergency may be; but without this we shall be compelled to continue an appeal to Congress and the Federal authority so long as they deny us the use of our own credits and resources, and I warn you that also will the tobacco States, the copper States, and sooner or later will come the wheat and corn States; but take off these shackles and each of these States or group of States similarly interested in a particular product can save themselves. The cotton States can do more; they can, under this system, solve the acreage problem by providing for a contract with the farmer who gets such loan that he will reduce his acreage to the amount agreed upon by the States cooperating for the proper marketing of this crop. However, this will not settle the present emergency. Acreage reduction can not settle it. "buy-a-bale" movement will aid, but it is but a beginning, just as "use a bale" will aid by the Postmaster General buying cotton strings, which annually amounts to enough to consume 4,800 bales by the Postal Department alone; just as using cotton bagging to wrap the cotton crop, which would take up the bulls and linters and give a market for this low grade of cotton, would consume upward of 200,000 bales. Yes, even if the boll worm and other insect pests would get busy with their oft-repeated policy, "eat a bale," it would aid, just as in 1904 the "burn-a-bale" movement aided to hold up the price; but there is only one solution and remedy in this crisis, and that is to "hold the bales," which can be done only by the Government passing the bill above referred to and agreed upon by the southern congressional cotton conference, so as to finance the "holding the bales" until the market is restored; and I repeat again, that neither the cry of "paternalism" or "lack of precedent" should deter our action in meeting this crisis and

giving the cotton farmer money for his crop that he in turn may buy wagons from Cincinnati, cotton fabric from New England, corn and flour from Iowa, Minnesota, and the Dakotas, mules and bacon from Kansas and Missouri, and fruit from California. Deny him this, and all these sections from New England to California must inevitably, whether they will or not, suffer with the cotton farmer.

OVERPRODUCTION FOLLY.

Driven to the last extremity some gentlemen tell us that there is an overproduction of cotton, anyway. I desire to place in the RECORD some figures showing the growth of cotton from 1790 down to and including the year 1913. An analysis of these figures touching the growth of production, its price, and the method by which both the price and production have been increased will be interesting to the man who will fix his attention upon this table long enough to learn the lessons which these figures surely disclose. I shall not attempt to draw all the conclusions which these figures will warrant, but I use them to explode the doctrine of overproduction. It will be shown that the foreign demand for cotton has increased proportionately to the American increased production of that crop, and hence it would seem that it is only with ample production that the establishment of foreign mills can be made possible and constant increase in their capacity can be insured. Here I give the tables:

Cotton production.

PRODUCTION, CONSUMPTION, EXPORTS, AND NET IMPORTS OF RAW COTTON, FOR THE UNITED STATES, 1790 TO 1913.

Production: The production statistics relate, when possible, to the year of growth, but when figures for the growth year are wanting those for a commercial crop which represents the trade movement have been taken. The statistics of production for the years 1790 to 1898, inclusive, have been compiled from publications of the United States Department of Agriculture; for the years 1899 to 1912, inclusive, and for other dates, when available, census figures are used.

Price of upland cotton: For the years 1902 to 1912, inclusive, the price per pound shown for upland cotton represents the average price of the average grade marketed in New Orleans prior to April 1 of the following year; for the years 1890 to 1901, inclusive, it is the average price of middling cotton on the New Orleans Cotton Exchange; and for the years 1790 to 1889, inclusive, it is taken from reports of the United States Department of Agriculture.

Consumption: The statistics of consumption for the years 1790 to 1894, inclusive, have been compiled from publications of the United States Department of Agriculture, and those for the years 1895 to 1903, inclusive, from reports of Latham, Alexander & Co. Census figures are used for the years 1904 to 1911, inclusive, and for other dates when available. The statistics relate to the 12 months during which the crop of the specified year was chiefly marketed, and not to the calendar year specified.

Domestic exports and net imports: For the years 1790 to 1819, inclusive, the statistics have been taken from American state papers, and for the years 1820 to 1910 from the reports on commerce and navigation of the United States, published by the Bureau of Statistics, Department of Commerce and Labor. For the years 1790 to 1842, inclusive, the statistics of exports relate to the 12 months beginning with October 1 of the specified year; for 1843 to 1886, inclusive, to the 12 months beginning with July 1; and for 1887 to 1911, inclusive, to the 12 months beginning with September 1. The statistics of imports relate to the same period as the statistics of consumption.

Year.	Cotton production.		Consumption of cotton and linters (equivalent 500-pound bales).	Exports of domestic cotton (equivalent 500-pound bales).	Net imports, long staple (equivalent 500-pound bales).
	Equivalent 500-pound bales, gross weight.	Average price per pound, upland cotton (cents).			
1913	14,156,486	13.1	.....	.....	.....
1912	13,703,421	12.0	5,630,835	9,199,093	225,460
1911	15,092,701	9.7	5,181,826	10,681,332	229,268
1910	11,608,616	14.7	4,516,779	8,025,991	231,191

[House bill 19417. Mr. Murray introduced the following bill, which was referred to the Committee on Ways and Means and ordered to be printed.]

A bill to amend the act of February 8, 1875, entitled "An act levying a tax of 10 per cent per annum on every person, firm, association, other than national bank associations, and every corporation, State bank, or State banking association on the amount of their own notes used for circulation and paid out by them."

Be it enacted, etc., That the act of February 8, 1875, entitled "An act levying a tax of 10 per cent per annum on every person, firm, association, other than national bank associations, and every corporation, State bank, or State banking association on the amount of their own notes used for circulation and paid out by them," be, and the same is hereby, amended to read as follows:

"That every person, firm, association, other than national bank associations, and every corporation, State bank, or State banking association shall pay a tax of 10 per cent per annum on the amount of their own notes used for circulation and paid out by them: *Provided*, That any State by legislative enactment may authorize any person, firm, association, or any corporation, State bank, or State banking association to issue such notes for circulation: *Provided further*, That such notes do not exceed the capital stock of such person, firm, association, corporation, State bank, or State banking association, and that all the assets of such person, firm, association, corporation, State bank, or State banking association shall be liable for the redemption of such notes issued for circulation: *Provided further*, That an amount of gold shall be held in reserve for the redemption of such notes equal to $1 for every $3 of such notes so issued; or any State by legislative enactment may authorize such notes for circulation by any person, firm, association, corporation, State bank, or State banking association upon State, county, township, or municipal bonds or bonds lawfully issued by legally organized drainage or irrigation districts, or associations, not to exceed 75 per cent of the par value of such bonds: *Provided further*, That 5 per cent in gold of the face value of such notes for circulation shall be held and maintained in reserve at all times for the redemption of such notes; or any State by legislative enactment may authorize such notes for circulation by any person, firm, association, corporation, State bank, or State banking association upon any staple product of the farm, field, or mine when the same shall have been fully insured against fire or deterioration in value or loss: *Provided further*, That there is held and maintained in reserve at all times 5 per cent in gold of the face value of such notes for redemption of the same: *And provided further*, That the State so authorizing such issue of notes for circulation upon the bonds or staple products herein named shall secure and guarantee with its credit the payment of all such notes upon demand by any holder thereof, and that such notes as herein authorized shall be exempt from all taxes and penalties otherwise prescribed by the act of February 8, 1875."

Defense of National Capital.

EXTENSION OF REMARKS

OF

HON. EDWIN S. UNDERHILL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. UNDERHILL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by the Hon. JOSEPH A. GOULDEN, of New York, at the exercises in unveiling the splendid monument erected in honor of the Twenty-fifth New York Cavalry in the Battle Ground National Cemetery, Washington, D. C., in memory of those who died in the battle at Fort Stevens July 11 and 12, 1864. The Twenty-fifth New York Cavalry were mustered into the service at Harts Island, N. Y., early in 1864.

The address is as follows:

"Its first engagement was with Early's corps, near Fort Stevens, just north of Washington, July 11, 1864. The regiment stood its ground nobly, although greatly outnumbered. Gen. Alexander McDowell McCook, one of the fighting brothers of that famous name, in command of the defenses, ordered the regiment to retire, which it did in an orderly manner, contesting every foot of the ground until relieved by the Ninth Regiment Veteran Reserve Corps.

"The Twenty-fifth Cavalry undoubtedly checked Early's advance and perhaps saved the Capital.

"Being on the ground near Fort Stevens, as a volunteer, it was my privilege to witness this engagement. I can, therefore, bear testimony to the bravery of the men under fire, to the excellent discipline maintained, and to the soldierly manner in which they slowly fell back under orders of Gen. McCook. I will be pardoned, I am sure, if I digress here to give a brief personal account.

PRESIDENT UNDER FIRE.

"I was stationed in the Washington Navy Yard at the time and vividly remember the intense excitement prevailing Early's famous corps of seasoned veterans of Lee's army was marching on the Capital with nothing but raw troops and thousands of cilivians—laborers, clerks, and so forth—from in and around Washington to oppose the enemy. Clearly I recall marching to Fort Stevens July 10 over muddy roads; of being stationed at Fort Slocum, just to the east of Fort Stevens, heavy guns in the different forts—mere earthworks—and of helping drill as best we could the civilians who were expected to help handle them. It is stated, and I believe truthfully, that President Lincoln was under fire at Fort Stevens on that memorable July 11. Fort Slocum and Fort Totten were under the command of Col. Haskin, a gallant officer. Of the other officers of note who were there I recall Gens. Meigs—the quartermaster general—Augur, Rucker, and Payne.

"The splendid work done by the Twenty-fifth New York Cavalry on the 11th of July saved the day, as it checked Early's advance and enabled the Sixth and a part of the Nineteenth Corps to arrive on the line of defense, which reached from Fort Stevens to Fort Lincoln, a distance of five miles. It is not generally understood, I imagine, what force constituted Early's army, which included a part of A. P. Hill's corps. I think, beyond a doubt, and that was Gen. McCook's estimate, that there were 30,000 men and 60 pieces of field artillery in Maryland in front of Washington.

"I desire to quote the following from the official records of the War Department: 'The first important encounter the regiment had with the enemy was in the repulse of Early's attack on Washington, July 11 to 12, 1864. It had been ordered back from the Army of the Potomac and placed on the picket line in front of Fort Stevens, Washington, D. C. At about noon, July 11, this picket line was attacked by a strong line of skirmishers sent out by Gen. Early. Gen. Alexander McDowell McCook, who was in command in person at Fort Stevens, observing the line was too thin to cope with the enemy's skirmishers, directed them to retire, slowly contesting their ground. The regiment was relieved at 4 o'clock in the afternoon—after having been under continuous fire for four hours—by the Ninth Regiment, Veteran Reserve Corps. The relief was, however, not accomplished until after a brisk fight, in which the Ninth Regiment lost 1 killed and 11 wounded.'"

The official records of the War Department show the following facts on this splendid regiment:

The first important encounter the regiment had with the enemy was in the repulse of Early's attack on Washington, July 11 to 12, 1864. It had been ordered back from the Army of the Potomac and placed on the picket line in front of Fort Stevens, Washington, D. C. At about noon, July 11, this picket line was attacked by a strong line of skirmishers sent out by Gen. Early. Gen. Alexander McDowell McCook, who was in command in person at Fort Stevens, observing the line was too thin to cope with the enemy's skirmishers, directed them to retire, slowly contesting their ground. The regiment was relieved at 4 o'clock in the afternoon by the Ninth Regiment, Veteran Reserve Corps. The relief was, however, not accomplished until after a brisk fight in which the Ninth Regiment lost 1 killed and 11 wounded.

In August, 1864, the regiment went to the Army of the Shenandoah and participated in the following military operations during the Shen-

andoah Valley campaign, August 7 to November 28: Toll gate near White Post, August 11, 1864; Cedarville, Guard Hill, or Front Royal, August 16; Winchester, August 17; Opequan Creek, August 18; near Kearneysville, August 25; Halltown, August 26; Duffield station, August 27; Berryville, September 3; Battle of Winchester, September 19; Fisher's Hill, September 22; Front Royal, September 25; and White Plains, November 27 to 28. It also participated in expeditions into Fauquier and Loudoun Counties, November 28 to December 3; to Gordonsville, December 19 to 28, and other points, remaining on duty in the Shenandoah Valley until June, 1865.

The regiment was mustered out at Harts Island, N. Y., June 27, 1865. Official statement furnished to Hon. J. A. Goulden, House of Representatives, June 10, 1914.

By authority of the Secretary of War:

GEO. ANDREWS,
The Adjutant General.

The regiment participated in some 30 engagements and lost, killed in battle and by disease, 104 men during its 18 months of active service. Its record is a highly creditable one, reflecting honor on the bravery of our American Volunteer soldiers. This splendid monument erected by the State of New York and unveiled to-day is but simple justice to its brave patriotic men who here gave up their lives for their country.

Denatured Alcohol.

EXTENSION OF REMARKS

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 13, 1914,

On the bill (H. R. 18479) to provide the Federal aid necessary to demonstrate the practical value of the amendments to the denatured-alcohol laws of the act of October 3, 1913.

Mr. FALCONER. Mr. Speaker, some weeks ago I introduced a bill, H. R. 18479, which provided for an appropriation to demonstrate the possibilities and practical value of the amendment to the denatured-alcohol laws. It is very evident that this subject is very much on the mind of the advanced farmers of the country, for I have received many letters from several different States asking for more detailed information, and some of the communications indicate a very good understanding of the subject, and these letters all are commendatory of the effort being made to bring to a stage of development for practical use the very important commodity, denatured alcohol.

I have read some press comments, too, on the purposes of this legislation, one particularly advancing the suggestion that the effort is hardly worth while, and, in fact, going so far as to discourage the enterprise. The veiled sarcasm of this article gives the reader the impression that a gold brick was handed the farmer in the denatured-alcohol amendment in the Underwood tariff bill.

It is possible, Mr. Speaker, that the friends of this measure are overenthusiastic. It is possible that the American farmer can get along without modern and advanced improvements that go to make farm life more congenial and the income greater. It is possible that the whole scheme of denatured alcohol as a source of light, heat, and power should be abandoned as not being worth while, and were we the pioneers of this enterprise, with no results attained to prove its value, we might become discouraged; but we are not the pioneers in the movement and we do not want for positive proof of its worth, for Germany and France have demonstrated to the satisfaction of students of the subject that the farmers of these respective countries, through their local stills, are producing the product at a low cost, and as a source of power it is invaluable.

The Rural New Yorker on September 5, 1914, published an article in response to a query by one of its readers, Mr. T. W. Rogers. I shall read the article, not for the value of its argument but because it is from the columns of an accredited farm paper and is based upon a letter written to the editor by the present Chief of the Bureau of Chemistry in the Department of Agriculture.

THE DENATURED-ALCOHOL SITUATION.

Tell that Hope Farm man to cut his philanthropy talk and tell us how to make denatured alcohol. You told us a year or so ago that if the tax was only removed we could use all our wastes and run a gas engine for less than nothing. But since the tax has been removed you have forgotten it all.

T. W. ROGERS.

NEW YORK.

The Hope Farm man will do almost anything to help things along, but this is a little too much for him. We have told a dozen times all there is to tell about this alcohol-tax matter. Some years ago a group of manufacturers worked up a nice little scheme to remove the tax on denatured alcohol—that is, grain alcohol to which wood alcohol is added. They were not strong enough to induce Congress to do this, so, as is usual, they worked "the dear old farmer" for the job. Certain lobbyists connected with the National Grange got busy and worked up a great sentiment for denatured alcohol. The money used in working this up evidently came from these manufacturers, and it was a good investment! The papers were full of articles, showing how this cheap alcohol was to revolutionize methods of heating and lighting. A farmer could use his small potatoes, rotten apples, and surplus corn fodder for providing alcohol and thus save coal and kerosene bills. Didn't they do all this in Germany and France?

No one could deny it! Are we to admit that Europeans are smarter than we are? Perish the thought! All we had to do was to "lick a stamp" and make Congress pass the denatured-alcohol bill. The farmer followed these grange "leaders," and did it, and the bill was passed. We have been waiting ever since for cheap alcohol for lighting and heating. It has never come, but those manufacturers got what they wanted for their manufacturing purposes. We pay as much or more for the goods which they make with the cheaper alcohol, and now see that the farmers simply acted as the cat's-paw to pull the chestnuts out of the fire.

Now, why can not farmers in this country make alcohol in small lots, as is done in France and Germany? This Government has spent considerable money in trying to find out, and the following reply by the Chief of the Bureau of Chemistry tells the story as we understand it:

CHEAP ALCOHOL FROM SMALL STILLS.

Referring to your letter requesting information as to how to make alcohol on a small scale out of farm refuse, and pointing out the fact that this has been more successfully worked out in France and Germany than in America, you are informed that it undoubtedly is true that alcohol is being sold cheaper in Germany than in America in spite of the fact that it is made there in plants of small capacity. The difference between German and American prices is plainly due to various causes.

First. In the first place, the low price in Germany is partly due to the German system of governmental regulation of the alcohol industry, which by means of a kind of preferential bounty favors the agricultural distilleries, and especially those which use potatoes for a raw material at the expense of the commercial distilleries and such as use other raw materials.

Second. In addition, the low price in Germany is due in part to the operation of the Centrale fur Spiritus Verwerthung, which distributes about 90 per cent of all the spirit made in Germany, and secures to the consumer a low price in that country in consequence of minimum distributing expenses.

Third. A further explanation of the differences between the cost of producing alcohol in Germany and this country is to be found in the fact that labor is lower paid abroad than here, in consequence of which the initial expense of the distillery, the cost of raw material, and the operating expenses all are lower in Germany than in the United States. It is well recognized in all lines of manufacture that with equally good business management the cost of manufacture or production is always less in a large plant than in a small one. In Germany, however, the small distillery has this disadvantage very materially offset by the fact that the governmental regulations favor the small distiller at the expense of the larger one.

Fourth. The manufacture of alcohol requires the use of ferment organisms, known as yeasts, which in order to produce satisfactory results must be used in fairly pure cultures. These organisms turn sugars, present in the fruits and other waste products, into alcohol. In order to succeed with this project, the farmer would be obliged to carry on fermentation processes under favorable conditions of temperature to give the yeast its opportunity to transform the sugar into alcohol. Any starchy material in the farm refuse could not be fermented without the prior change of these starches into sugars. This change is brought about by the use of malt, which the farmer would certainly find difficulty in preparing for himself, and which he might perhaps find difficulty in purchasing. Assuming an abundance of refuse containing starches and sugars, and assuming that the farmer could have access to malt and yeast, he would have to carry on the fermentation under favorable temperature conditions. He would then be obliged to distill the fermented material. If a cheap still were used, the alcohol obtained would run about 50 per cent strength, being too low to use for light, heat, or power. If he were to obtain alcohol of the necessary commercial strength (90 to 95 per cent), it would be necessary to have a much more complicated distilling apparatus, which would cost several hundred dollars, and which, being very complicated, would require a skilled man to assume responsibility for its operation and care.

C. H. ALSBERG, *Chief.*

Mr. Speaker, I would not question the standing of the chief chemist herein quoted. Holding the position he does in this most important department of our Government we have a right to expect that his qualifications are standard. We also have a right to expect that he has the welfare of the farmer at heart. But, sir, I want to consider a phase or two of his letter, and let the friends of this measure pass judgment as to whether or not he is friendly to the idea of farmers making industrial alcohol on their farms.

The chief chemist makes something of a discussion on ferment organisms known as yeast and the need of the farmer having access to malt, but the whole tone of the letter is disheartening to those who have looked with engaging interest on the achievements of the farmer in Europe.

Has the chief chemist been sufficiently interested in the subject to qualify on an understanding of the amended law? The suggestion is made that a cheap still would produce alcohol of only 50 per cent strength. Well, Mr. Speaker, the friends of denatured-alcohol distilling on the farm would be very well satisfied if the product of small farm stills would average 50 per cent.

Under the law as amended a farmer can produce an alcohol of any strength—10, 50, or 90 per cent, the strength required for denaturing and for use for light, heat, and power. The farmer in his small still can produce a low per cent product and then

take this to the central plant, where it will be redistilled to the strength required for industrial use.

The Underwood tariff-act amendment expressly intended to cover this feature. The letter suggested that if the farmer would obtain alcohol of necessary commercial strength—90 to 95 per cent—it would be necessary to have complicated distillery apparatus, costing several hundred dollars.

It would be a great boon to the waiting farmer if he could be shown where he could get a still for "several hundred dollars" that would produce 90 per cent alcohol. It is generally accepted that a central plant which will produce such a high per cent product would cost several thousand dollars.

To the friends of denatured alcohol this article is not specially satisfactory. The editor of the Rural New Yorker got little practical information from the chief expert of this Government, which "Government has spent considerable money trying to find out."

But I am going to refer the Rural New Yorker to other experts.

Dr. Crampton, a former chief chemist of the Bureau of Internal Revenue, was one of two special commissioners sent by this Government to Europe to investigate the very question of farm distilling. His testimony is taken from the official report, and is as follows:

The greatest ultimate advantage to be reaped from the denatured-alcohol law, however, are its benefits to agriculture, in the shape of increased diversification of crops, enhanced productiveness of unfertile soils, and utilization of what would be otherwise waste crops or by-products of crops.

The one thing we need in our country in this matter more than anything else is the reduction of the cost of making alcohol. The Germans, after 40 years of experience and experiments, use cheap potatoes, while we are yet compelled to use high-priced grain. Our western country—the Dakotas, Nebraska, Minnesota, Montana, Iowa, and Kansas—will be the first to produce alcohol from potatoes and farm molasses, the by-products of the sugar beet.

I wish to quote the testimony of another expert, Dr. Wiley, formerly chief chemist of the Bureau of Chemistry in the Department of Agriculture. Before the Ways and Means Committee, at the free-alcohol hearings, when the first denatured alcohol laws were in process of enactment, he said:

The farmer can grow any amount of starch and sugar that may be wanted for any purpose in the world. There is no limit to the amount of starch and sugar which the farmers of this country can grow, and not a pound of starch or sugar takes one element of fertility from the soil. It is a pure gift of God, and if He had not meant it to be used I suppose He would not have given it to the world. So there is no limit, in my opinion, upon the capacity of the farmers of the country to supply the materials for making ethyl alcohol.

The preponderance of expert testimony is decidedly in favor of the manufacture of industrial alcohol, and tends to encourage a prosecution of the enterprise, and makes plain the practicability and economic importance of the farm distillery. Exceptions to this almost universal sentiment among chemists may be found in those employed by corporations whose monopoly profits might be endangered by the free, independent farmer engaging in the business of producing liquid fuel for heat, light, and power.

Mr. Speaker, the question Mr. Rogers asked the editor of his farm paper, which brought forth such an answer, is the kind of answer farmers all over the country have been getting.

The editors of technical papers, especially of those papers more closely allied with chemists and the chemical industries, look upon the problem with rational understanding and encouragement. In point I refer to a presentation of the question by the Journal of the National Association of Retail Druggists of September 3, 1914, the same week of the published article above referred to in the Rural New Yorker. The Journal of the National Association of Retail Druggists says:

SPREADING THE DENATURING IDEA.

That very good friend of ours, Congressman FALCONER, of Washington State, has introduced a good bill which aims to form a commission to demonstrate the practicability of producing denatured alcohol on the farm. The bill is carefully drawn and would provide that the farmers to be benefited should bear part of the expense of the experimental stills and other operating expenses. Denatured alcohol has furnished a series of mysteries, or betrayals, of the American people.

Every druggist remembers the claims that were made for the future of denatured alcohol when the law was passed. While we may, at first thought, consider those claims exaggerated, serious consideration fails to find a reason why they were. Neither chemical nor mechanical reason has been shown why alcohol should not be produced at trifling cost from what is largely farm waste. And we who are familiar with the common and simple uses of alcohol for generating heat, light, and power will not for a moment believe that American genius is unable to apply it where petroleum products are so universally used.

We remember that shortly after the law for the denaturing of alcohol was passed that a subsidiary of the universal monopoly, a subsidiary of that part then known as the Whisky Trust, started to exploit denatured alcohol on a large scale. True, it exploited it under a trade-marked name, and it controlled the lamps, chafing dishes, and many other practical appliances which it showed. It was self-evident that it started out to and expected to create a denatured-alcohol monopoly. Suddenly it stopped its great advertising campaign, and, apparently at tremendous loss, drew out of the scheme. Why? It seems reasonable to believe that it found that it would be impossible to maintain a monopoly in a substance so easily produced from so many sources. What followed? Not much of anything, so far as denatured alcohol is concerned. What has prevented the development of the wonderful possibilities of denatured alcohol?

Is it not probable that the interests who found they could not monopolize it have been powerful enough to strangle it that they may continue their profitable monopoly of gasoline and the illuminating and motor oils?

Did the 600 "farm demonstrators" who were supposed to be employees of the Department of Agriculture, but who were drawing their salaries from the Rockefeller Educational Fund, help to make the farmers indifferent to denatured alcohol? Did the agricultural college professors, the "farm betterments," the rural-life agitators, and others paid by the "benevolences" of the mail-order branches of the universal monopoly help to keep denatured alcohol in the background? In brief, has the "invisible government" prevented the general production of denatured alcohol?

Mr. Speaker, the editor of this drug journal has a finer appreciation of what is intended and the effort being made to obtain desired results than the writer of the article in the paper previously quoted. And I am convinced that the view of the Journal meets more nearly the approval of the farmers of the country.

Certainly there is a work for the Congress to do, and House bill 18479 outlines that work. I am not of the belief that the amendment to the denatured-alcohol laws enacted during the first session of this Congress is useless. I have the opposite view and think it is one of the strong provisions in the bill accruing to the public good, and the farmers who wish for a substantial benefit through the denatured-alcohol still on the farm are of this opinion. The passage of my bill by this Congress will demonstrate that the people of the country are represented, with the result that no monopoly will have power to strangle the enterprise and no invisible government will be able to retard its development.

Only a few thousand dollars by the Government, Mr. Speaker, to make a demonstration and this industry will rapidly advance. States will relieve the Federal Government and eventually the individual and associated farmers' organizations will relieve the States.

It works to an end. The duty of Congress is plain, and certainly before this Congress adjourns this bill should pass. The whole question is presented by the Druggists Journal:

1. What has prevented the development of the wonderful possibilities of denatured alcohol?
2. Is it not probable that the interests who found they could not monopolize it have been powerful enough to strangle it that they may continue their profitable monopoly of gasoline and illuminating and motor oils?
3. In brief, has the invisible government prevented the general production of denatured alcohol?

Mr. Speaker, whatever else may be said of this Congress, it has been known as a Congress of action, and the people of the country have realized on their demand for legislative action.

Among the many things that may be accomplished by the Sixty-third Congress, the legislation herein asked for will, if enacted, hold a prominent place, and the administration will be strengthened, for the welfare of the farmer is the welfare of the Nation. The American public recognizes this fact, and, generally speaking, desire the provisions of H. R. 18479 enacted into law:

A bill (H. R. 18479) to provide the Federal aid necessary to demonstrate the practical value of the amendments to the denatured-alcohol laws of the act of October 3, 1913.

Be it enacted, etc., That there shall be established under the general direction of the Secretary of Agriculture a special industrial alcohol commission, composed of a commissioner, who shall be known as the commissioner of industrial alcohol, and two assistant commissioners, which commission shall have charge of building and operating one or more demonstrating farm industrial alcohol distilling plants composed of small, low-proof stills, on the farm in combination with central redistilling denaturing plants, as provided for in the revised denatured-alcohol laws of the act of October 3, 1913. The commission shall also conduct experimental and research work in the industrial uses of alcohol and establish a bureau of information and educational publicity covering all questions relating to industrial alcohol under such regulations as, with the approval of the Secretary of Agriculture, the commissioner of industrial alcohol may prescribe.

SEC. 2. That the commissioner of industrial alcohol shall be appointed by the President, by and with the consent of the Senate, and shall hold office during the life of the commission, or for a term not exceeding five years, unless sooner removed by the President upon reasons to be communicated by him to the Senate, and he shall be entitled to a salary of $6,000 a year.

SEC. 3. That the Secretary of Agriculture, at the request of the commissioner of industrial alcohol, may appoint two assistant commissioners, who shall be known as the first and second assistant commissioners of industrial alcohol, and who shall each be entitled to a salary of $3,500 per year, and who shall perform such duties under the commissioner as he shall direct. During a vacancy in the office of the commissioner, or during his absence or disability, the first assistant commissioner shall possess the power and perform the duties of the commissioner, and in the absence of both the commissioner and the first assistant commissioner the second assistant commissioner shall possess the powers and perform the duties of the commissioner.

SEC. 4. That there shall be assigned to the commissioner of industrial alcohol by the Secretary of Agriculture rooms for conducting the business of the commission, and the commissioner shall from time to time furnish the necessary furniture, stationery, and other conveniences for the transaction of the business of the commission.

The commissioner shall employ from time to time the necessary clerks, to be appointed and classified by the Secretary of Agriculture, to discharge such duties as the commission shall direct.

SEC. 5. That no demonstration distillery or distillery group provided for in this act shall be built and operated in any community unless a part of the cost of the central plant is subscribed locally and a sufficient number of farmers within a radius of 5 miles of the proposed central distillery to insure the practical success of the demonstration, agree to install on their farms small, low-proof stills, and operate them on such terms and conditions as the commissioner of industrial alcohol, with the approval of the Secretary of Agriculture, may prescribe.

SEC. 6. That for the purpose of carrying out the provisions of this act there is hereby appropriated, out of the money in the United States Treasury not otherwise appropriated, the sum of $100,000, or so much thereof as may be necessary.

Rural Credits.

Address of Judge Robert W. Winston, of Raleigh, N. C., before the North Carolina Farmers' Convention, at Raleigh, N. C., August 27, 1914.

EXTENSION OF REMARKS

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. SMALL. Mr. Speaker, the intelligent people of the country, regardless of their vocation, have come to appreciate the importance of establishing a system of rural credits, and that it must be undertaken by the Federal Government.

The serious defects of our currency or national banking laws will in large degree, if not entirely, be removed by the Federal reserve act recently enacted by Congress and soon to be in operation; but even this splendid statute will not provide a system of long credits for the farmers, so necessary for the development of agriculture.

President Wilson is committed to the enactment of a law which will effectuate such a purpose, and the appropriate committees of Congress have been studying the subject.

Ex-Judge Robert W. Winston, a distinguished member of the Raleigh (N. C.) bar, and an eminent publicist, has made a valuable contribution to the literature on rural credits in an address before the North Carolina Farmers' Convention at Raleigh, on August 27, 1914, and I esteem it a privilege to publish the same in the RECORD.

The address is a[illegible]ws:

"Let us first con[illegible]er whether the Government should make loans on farm lands at all; if so, how it should go about it.

"The latest census shows that the prosperous States of Ohio, Indiana, and Missouri had fewer people upon the farms in the year 1910 than there were in the year 1900 and that in 22 States of the Nation there was a practical standstill of the population upon the farms during the same period. It will perhaps surprise you to know that the State of North Carolina during these 10 years increased in its city population 53 per cent, while the increase in its country population was only 12 per cent. William C. Hunt, chief statistician for population, in a bulletin entitled 'Number and Distribution of Inhabitants,' shows that our cities and towns, taken as a whole, are rapidly growing in population at the expense of the country districts. In 1880 70 per cent of the population of the United States was living upon the farm and only 30 per cent in the cities. In 1910, so rapidly had the cities grown, that the population was divided about half and half between city and country. If this rate continues for 25 years, 90 per cent of the voters will be living in cities and only 10 per cent in the country districts; and the reins of government will have passed from the man who owns the soil to the man who has no interest in the same and who lives in the cities. This condition of affairs calls aloud to us for a change.

MUST PRESERVE OUR LAND FOR WHITE PEOPLE.

"This subject concerns us of the South more vitally than other sections because of the necessity of conserving our white civilization and of the danger of our lands passing into the hands of negro owners. Says Clarence Poe:

"As a result of these conditions the facts are—and they remain facts whether we ignore them or not—that in every Southern State east of the Mississippi, except Florida, the percentage of negroes on the farms is increasing; the negroes are gaining on the white proportionately, and rural districts are becoming blacker instead of whiter. Moreover, not only are the rural sections of the South getting blacker instead of whiter, but the negroes are gaining most rapidly in farm ownership (17 per cent gain in negro ownership to 12 per cent in white), while—most sinister fact of all—it is the white farmers who are fastest becoming tenant class (188,000 gain in white tenants, or 27 per cent, and only 118,000 gain in negro tenants, or 21 per cent).

"AMERICAN AGRICULTURE BEHIND THE TIMES.

"Dr. Wiley says that in agriculture we are 50 years behind Europe, and that the better utilization of our farm resources is one of the most important problems before the country. Acre for acre we are producing less than any nation on earth except Russia. We are beginning to buy our meats from South America and our breadstuffs from Canada. We have more waste and idle land than any nation on earth. In Europe the average farm contains from 15 to 20 acres, while in America the average farm contains more than 100 acres. Ambitious and enterprising families are leaving the farms and rushing to the towns. The army of producers grows smaller and smaller; the army of consumers multiplies daily. In manufacture, in commerce, in railroads, America leads the world, but not so in agriculture. In the matter of fostering and encouraging agriculture the policy of our National Government has been that of 'do nothing.' In this respect we have followed the example of England. England and America have been content to build up factories and great marts of commerce, so that it has come to pass that London, Liverpool, and New York are the mistresses of the commercial world; but both of these nations have neglected agriculture.

"AGRICULTURE DISCRIMINATED AGAINST.

"Until recently there have been no colleges or schools in which farming is taught and no experiment stations; and to this day there is no intelligent financial system built upon the farm as the basis of credits.

"Until the passage of the regional-bank act it was a violation of the law for a Government bank to take a mortgage upon real estate at all, whereas more than 50 years ago Government banks had been established in France based upon farm lands as security, and other continental countries had followed her example with success. But for the troubles in Mexico it is probable that President Wilson would have urged upon Congress the passage of a bill at this session extending credit upon farm lands.

"The policy of our Government has been to foster manufactures by tariff taxes and to build up immense cities and towns. For example, Government funds are deposited in city banks. Magnificent buildings, post offices, courthouses, customhouses, mints, and costly buildings for other purposes have been constructed by our Government in our cities and Government money by millions is paid out to officials of the Government residing in these cities, and for harbors, terminals, and other improvements. It may be true that the Government is under the necessity of furnishing these advantages to the cities and not to rural districts, because by so doing a greater number of the population is conserved, but the fact remains, greatly to the advantage of the one and to the disadvantage of the other.

THE STABILITY OF THE REPUBLIC DEMANDS IT.

"But I maintain that, for a stronger reason, the Government must lend money on farm lands, and that is in order that a majority of the voters shall be interested in the soil.

"The machinery of our Government is so delicately adjusted and requires so much of intelligence and virtue in its management that when 51 per cent of the voters become careless and indifferent to republican institutions the Republic itself will be in danger. Our duty is plain. We should restore the equilibrium between city and country. 'Back to the farm' should be no idle phrase. The unhappy condition of the Governments of Europe as their soldiers rush into battle at the whim of an Emperor, Czar, or King, while the masses of the people suffer and die, should give us occasion to inquire if we fully appreciate our country, and if we are zealous in her behalf, and if we are doing all that we can to make her free institutions perpetual and universal.

DR. HILL ON SCIENTIFIC FARMING.

"When Dr. D. H. Hill asked me what would be the subject of my address I told him the backwardness of American agriculture. 'Now,' said he, 'don't you get down in the mouth on this subject. We have just begun to pay attention to scientific farming in the United States, and in a few years we will excel Europe in agriculture, as in everything else.' I trust that we may, but in order to do so it is necessary to make country life attractive and to carry the comforts, conveniences, and advantages of the town into the country districts.

"This brings me to the important part of what I venture to say to you this morning. To make country life attractive there must be more money, cheaper money, and longer-time money for the farmer.

"When little Paul Dombey turned his old, old face to his father and said, 'What is money, father?' the mercenary Dombey, sr., replied with a start, 'Why, money, money, Paul, can do anything.' Mr. Dombey was mistaken. Money can not do everything. But without sufficient money people can not

be comfortable, and so my first observation is this: In order to make country life attractive and in order to hold the people upon the farms, it is essential that they shall have sufficient ready money to foster cooperation and to build an ideal community—homes with running water, electric lights, illuminating gas, good roads, churches, efficient schools, telephones, horses, automobiles, lecture halls, theaters, daily mails, newspapers, and circulating libraries. The question is how can this money be supplied.

THE SOUTH NOT YET READY FOR COOPERATIVE BANKING.

"I have read all that has been said or written on the subject of agricultural credits—the report of the United States commission, the report of the American commission, and the minority report, the proceedings of the Senate and House joint committees charged with the investigation of rural credits, the debates in Congress, the Fletcher bill and the various other pending bills, including the final word on the subject, as set forth in the Hollis-Bulkley bill—nor have I failed to investigate the system of credits existing in Germany, France, and other European countries. As to the whole matter, I give my opinion—with hesitancy and with becoming modesty, I trust—that the machinery of the various bills pending in Congress seems to me too intricate—certainly for our southern people. As to the Raiffeisen system, by which a dozen or more farmers 'go into cohoot' and on their joint notes and credit borrow large sums of money on long time and at a low rate of interest for their several farming operations, I feel quite sure that this will not suit the genius of North Carolina farmers. I would not advise any friend of mine to go into such an enterprise, whereby he might imperil his estate for the benefit of another.

DIFFERENT SECTIONS REQUIRE DIFFERENT FINANCIERING.

"In dealing with this complex question we must remember that conditions in the South are different from those on the Pacific slope or in the New England and Middle States. Former Gov. Bulkley, of Connecticut, recently said to me that the New England farmers did not stand in need of long-time loans, and that they could get all the credit which they needed through their local banking associations. This is also perhaps true of the Middle States, but it is not true of North Carolina and of the Southern States generally. The North Carolina landowner who has good security, as a general thing, borrows such money as he may need at a reasonable rate of interest, but he can only get it on short time. Banks lend money in this State for 60 and 90 days generally, with the privilege of one or two renewals; but the trouble with the borrower is that when times get hard and money tight with him, it gets tight and hard with the bank also, and the bank calls on him for the money, and he must scuffle around and incur additional expense to get the loan renewed.

"All of the bills now pending before Congress agree in one particular, to wit: That the borrower shall be permitted to pay back a loan, a little at a time, and from year to year.

"The advantage of this plan is so admirably set forth by T. N. Carver, director of rural organization service, in Farm Bulletin No. 593, entitled 'How to Use Farm Credit,' that I urge all persons interested in this subject to read it. Our wise men have discovered a big word to designate this plan of paying back money in broken doses. They call it the 'amortization plan,' which we will consider hereafter.

THE HOLLIS-BULKLEY BILL AND COOPERATION.

"I heartily approve of the passage by Congress of the Hollis-Bulkley bill. It will no doubt be put in successful operation in States like Wisconsin, where the farmers are thoroughly organized and know the value of cooperative societies. But I fear that in the South and in other sections of the Union the machinery of a bill of this kind is so complicated that it would be a dead letter and would not work.

"The organization of cooperative institutions among our farmers will hasten a system of rural credits. I know of nothing more inspiring than the work of the Catawba County farmers along this line. Bulletin No. 119 of the University of North Carolina Record, which treats of the Catawba Cooperative Creamery Co., Catawba Sweet Potato Growers' Association, Catawba Farmers' Union Warehouse Co., Catawba Rural Credit Association, should be in the home of every farmer in the State. But, as pointed out by John Sprunt Hill, a member of the American commission, in his address before the conference for education in the South, at Louisville, on 'Land-mortgage credit associations,' it is difficult to organize a 'joint-stock bank' and it is very difficult to successfully operate land and loan associations in the State of North Carolina. Building and loan associations have done good work at Charlotte and in some other cities, but they have generally either failed or for the lack of patronage accomplished little good.

PLAN SUGGESTED: DIRECT LOANS ON FARM LANDS.

"The minority report of the American commission severely criticizes the European system of cooperative farm loans. I would not undertake to pass upon this delicate question. But I think that all will agree with me that at this time in the South the community spirit is not sufficiently developed to warrant the adoption of such system. Our southern people are self-assertive and individual, and while they are homogeneous in one sense of the word, they are not gregarious, they live in sparsely settled neighborhoods, nor are they of a uniform religious belief.

"If the Hollis-Bulkley bill is not adapted to southern conditions, what financial plan should be adopted? The Government should lend money directly to farmers without any unnecessary machinery or circumlocution. This could be done easily and with safety. My suggestion is that the details of loaning should be worked out by the Federal Reserve Board, as created by the act of Congress of December, 1913, entitled 'the Federal reserve act,' and that some of the machinery of the Hollis-Bulkley bill should be used in making these direct loans—such as the appointment of a farm land commissioner, the purposes for which such loans would be made, the per cent that the loan should bear to the land mortgaged and to the value of the improvements upon the land, and the incorporation into each mortgage of the 'amortization plan.' My first object would be safety. To this end, in each loan district, which might embrace an entire State, a fund of, say, one-half of 1 per cent would be taken from the money lent and set aside to meet any possible losses upon the various mortgages within said loan district. This reserve fund would increase from year to year and could be also loaned out to advantage, and at the end of the amortization period the one-half of 1 per cent so charged against the borrower, together with interest upon the same, should be returned to him if not needed to meet losses. To pay the salary of the land commissioner and of the appraisal committees and to defray the legal expenses, a fund of about one-half of 1 per cent of the amount loaned would be required at first. But as the various States under the supervision of the Reserve Board and land commissioner improve their registration laws this per cent would become much less and might fall to the one-fourth of 1 per cent. If a law of this kind were enacted, containing so many benefits to borrowers, they would be so numerous that the land commissioner would be puzzled in selecting from among them. In France borrowers are selected by lot. Let Congress pass the Hollis-Bulkley bill, by all means. But let it also pass a bill authorizing direct loans on farm lands.

TORRENS LAND SYSTEM.

"We might pause here to consider the reflex good which would result from the improvement of our registration laws. Might we not shortly expect the Torrens land system throughout the Nation? Indeed, the act would provide that the land commissioner should not make loans in any State whose registration laws failed to come fully up to the standard. The rate of interest charged should correspond to the legal rate in each State. For example, the rate of interest in North Carolina would be 6 per cent. Of this sum, as above shown, one-half of 1 per cent would go to the expense account; one-half of 1 per cent to the reserve fund, to be returned to the owner if not needed; and 5 per cent, as the interest charge, would go to the United States Government.

HOW A LOAN WOULD WORK.

"Attached to Farmers' Bulletin No. 953 are amortization tables which show how long it will require to pay off a mortgage for $1,000 at 5 per cent and at 6 per cent by making annual payments of $100, $90, $75, and $70. Let us suppose that a farmer wishes to purchase 100 acres of land, and needs $1,000 to complete the trade.

"He makes application to the local Government agency, and the loan is approved. The mortgage is drawn authorizing him to pay off the whole debt and interest at any time he wishes. But it also allows him, if he desires, to repay the loan of $1,000 by making yearly payments of $100, and it further provides that if he pays $100 each year he can not be molested by the Government. The table shows that in 15 years he will have paid off the entire debt, principal and interest. This allows him the return of one-half of 1 per cent at the end of the period. If he should not get back any part of this one-half of 1 per cent, it would require 16 years to pay back the $1,000 by making an annual payment of $100 a year.

PROBABLE OBJECTIONS TO PLAN SUGGESTED.

"The chief objection to my suggestion that the Government shall lend money to the farmer directly, without the intervention of rural associations or rural banks or other complicated machinery, is that the security offered by the borrower will prove bad and that the Government will lose money by the

transaction. Just one personal word here—for 20 years as attorney for clerks of the court and for trustees, guardians, banks, and a great many prosperous farmers, myself and my associates have negotiated loans on lands amounting to fully a million dollars. I have never lost a cent thereby, nor have I sold out 1 acre of land under mortgage, nor had a lawsuit. All careful attorneys in North Carolina have had the same experience, I am sure. But it is said that the money is not needed in our State. I believe that $5,000,000 could and would be absorbed in North Carolina in six months. This money would be used to take up old mortgages which have been outstanding for a long time, and which have been renewed from year to year, and are a menace to the landowner; and it would also be used by the young men all over the State to purchase lands and 'set up for themselves' rather than continue the tenancy system which is so universal in our State, and by farmers generally to improve their farms. If $5,000,000 were appropriated to our State and loaned out, to be repaid on the amortization plan, this fund would be perpetual, or what is called a revolving fund, to be loaned again and again as it was repaid each year.

"A first-rate illustration of the value of a large revolving fund is in the North Carolina school building and improvement fund, originally about $2,000 and created some 25 years ago. This fund is loaned for the purpose of constructing and improving schoolhouses. The loans are repaid, together with 4 per cent interest, in 10 annual installments. The fund has grown to nearly $500,000, and an endless chain of borrowing and building and building and borrowing, under the wise management of Supt. Joyner, has produced a new schoolhouse every day in the year, Sundays included, from Aycock's administration to Craig's.

"It would not be difficult for the Government to provide money to make these loans. I am advised by the Treasury Department at Washington that the deposits in postal savings banks are nearly $50,000,000 and that the Indian fund is nearly as much. Some or all of this money would be available for farm loans. If necessary, Government bonds should be sold on long time and the proceeds used for farm loans. Some one may say, however, that this would be unconstitutional. But if the Government can constitutionally finance the Centennial Exposition of 1876, the World's Fair of 1893, and the Panama Exposition of 1915, and irrigate western lands under the general welfare clause of the Constitution, surely, surely, that clause is broad enough to warrant Congress in creating and fostering upon the hills and plains of America a training school for good citizenship, where people may be encouraged to raise hogs and cattle and wheat and corn and cotton, rather than to leave the old homestead and rush to the cities, becoming a menace to republican government.

PRESENT PRICES OF COTTON AND TOBACCO.

"A bill of this kind would enable cotton and tobacco farmers to borrow money in the present world crisis and to hold their crops until the mad war in Europe had ended and the prices of these crops had become normal again. The advantage of borrowing from the Government, as we have seen, would be that the borrowers could not be frozen out when cotton and tobacco are selling at less than cost of production. Much has been said in favor of the organization of a huge New York syndicate to lend money to cotton farmers at the rate of $40 a bale.

"It seems to me that this would be putting the head of the lamb in the mouth of the lion! It would tend to keep down the price of cotton, because the mills would know that when the northern syndicate chose to pull the string the cotton market would be flooded by the sale of mortgaged cotton. If, on the other hand, large sums of money were loaned directly by the Government on farm lands, on the 'amortization plan,' the situation would automatically care for itself and the cotton and tobacco farmers would not be playing at a game of 'freeze out.'

"The reason that the banks, both State and national, in our State are unable to advance money at this time on any kind of security is that they are carrying mortgages on farm lands which have become permanent loans and which they do not have the heart to foreclose, amounting to millions of dollars. If the Government would make direct loans on farm lands, this money would be paid into the banks and the banks would be compelled to seek new investments for said funds. In this way millions of dollars would be available in the present money stringency.

RUSSELL, OF THE IRISH HOMESTEAD.

"I do not claim that laws of this character will be a cure for all evils of the times, but they will magnify the farmers' calling and will do much to make rural life attractive and to hold the people together upon the farms. As George W. Russell, of the Irish Homestead, says, 'the fight now is not to bring the people back to the land, but to keep those who are on the land contented, happy, and prosperous.' We must organize the country people into communities, for without some kind of communal life men hold no more together than the sinking sands of the seashore. Our civilizations are a nightmare, a bad dream. They grow meaner and meaner as they grow more urbanized. What could be more depressing than the miles of poverty-stricken streets around the heart of any modern city? The memory lies on one heavy as frost and deep almost as life. It is terrible to think of the children playing on the pavements, the depletion of vitality, with an artificial stimulus supplied by flaring drink shops. The spirit grows heavy as if death lay on it while it moves amid such things. And outside these places the clouds are flying overhead snowy and spiritual as of old, the sun is shining, the winds are blowing, the forests are murmuring leaf to leaf, the fields are green, but the magic that God made is unknown to these poor folk. Truly the creation of a rural civilization is the greatest need of our time. It may not come in our day, but we can lay the foundations of it, paving the way for the great Prophet when he will come."

Economy Needed in Government.

EXTENSION OF REMARKS

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914.

Mr. GILLETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by Representative WINSLOW at the Republican State convention in Massachusetts:

ECONOMY IMPERATIVE IN GOVERNMENT NOW—COL. WINSLOW SAYS BUSINESS DULLNESS IS DUE TO DEMOCRATIC POLICIES IN FORCE FOR LAST 18 MONTHS—PEOPLE'S MONEY MUST NOT NOW BE SPENT FOR WORK THAT IS UNNECESSARY, AND PLEDGES TO ECONOMIZE MUST BE MORE THAN WORDS.

Col. SAMUEL E. WINSLOW, permanent chairman, addressed the convention as follows:

"Before entering upon the arranged program of this convention I take the liberty of addressing the delegates here as a citizen of Worcester.

"It will be interesting to you to know that in 1854 a political convention was held in Worcester, of which a portion of the delegates referred to themselves as Republicans, marking the first use of the party designation in Massachusetts. In 1855 the first regular out-and-out Massachusetts Republican State convention was held here. From that time until 1882, 26 Republican State conventions, all told, were held in Worcester, nearly all of them in this hall. It is therefore with peculiar interest that Worcester Republicans, and I may fairly say all the citizens, welcome the return of the old Republican Party to the 'Heart of the Commonwealth.'

"Our city may be regarded as a model from the standpoint of an intelligent, law-abiding people, representing upwards of 45 nationalities, and from the viewpoint of educational institutions, and of those social organizations which accomplished so much in our present-day communities. We are thrifty above the average.

"We are essentially a manufacturing city of the most diversified products. Our industries developed from small beginnings now include many world leaders in their lines.

"What better setting could there be for a Republican convention? We furnish here a living monument to the constructive power of that greatest of all Republican economic principles, the protective tariff.

"In proportion to the blessings we have enjoyed from Republican legislation so do we wish you to regard the fullness of our welcome to you here to-day.

"Before considering political matters, I wish to express the deep regret of Massachusetts Republicans because of the recent painful and serious accident to Gov. Walsh, and likewise to extend to him congratulations on the assurance of his speedy and complete recovery.

"In a memorable platform written by Senator Hoar, in 1894, Massachusetts Republicans declared thus as one of their principles: 'Reform of old abuses; leadership along loftier paths; minds ever open to the sunlight and the morning, ever open to new truth and new duty as the new years bring their lessons.'

"Was it not perhaps a failure to live up to such a standard that led many Republicans two years ago to leave our ranks in

the belief that they could establish a political party which would more nearly represent the spirit of the time?

"Those citizens have played their part courageously, and I believe honestly, with a twofold result; first, of opening the eyes of those who preferred to continue under the Republican banner to the fact that there was apparently a need for the 'reform of old abuses'; and, second, without the Republican fundamentals and traditions, in which they have at all times believed, they found themselves unable to accomplish in public affairs the reforms they demanded.

AWAKE TO NEW DUTY.

"To-day the Republican Party, on the one hand, is again awake to 'new truth and new duty' and is acquiring 'leadership along loftier paths,' and on the other hand, those who left us recognize these facts, as we can judge from reports from one end of this land to the other, and they are returning to the family hearthstone. As a constant Republican, I recognize the benefit of the lesson and I welcome the return of my brothers.

"Such an awakening to new strength is not uncommon in commercial enterprises. An old store, for instance, has for many years maintained a reputation for honest goods and fair prices, its customers have been constant and satisfied, its business has been prosperous and substantial.

"But the old store comes to rely too heavily upon its honest goods of established value. Its managers who have seen its fair dealings succeed year after year come to place all their faith in the old methods. A competitor advertises in a novel way, but the old store sticks to its simple announcements. A competitor invests its capital, mainly in show windows, in show cases, in brass and nickel plate, to attract attention. A competitor seeks to supply its customers with new designs of woolens, with the latest odd weave effected by fashion, with shoes of the highest heels, or furniture of queerest shapes, and has only a minor interest in the grade of wool in the woolens, the purity of the silk, the quality of leather in the shoes, the solidity of its furniture. The old concern rests its faith in the attractiveness of its honest goods and fair prices.

"Suddenly, for reasons which the old store fails to foresee and appreciate, but which to observant and wide-awake men seem simple and not to be wondered at, the old concern finds itself losing its supporters. They have drifted away; the business is no longer successful.

"But the old store does not quit. Its assets are too great; its reputation and traditions are too honorable and of too long standing. Up-to-date, aggressive business quickly detects the need. New blood is necessary. Many stockholders, alive to their interests, insist upon it. New men, with 'minds open to the sunlight and to the morning,' are called upon to manage the old store.

"The old concern now presents itself in vigorous and forceful advertising. The old store is remodeled into one of light and attraction. The latest designs of woolens, of shoes, of furniture are offered to its customers. The very history of the old concern leads the new blood to maintain the old standards of honest woolens, of pure silks, of solid furniture. Success is as sure as was the decline. Customers return, new customers come, The old store, awake to the new spirit and possessing the rich and unpurchasable asset of a long history of honest dealing, thrives as never before.

COMING BACK TO FOLD.

"To-day the Republican Party is acquiring 'leadership along loftier paths.' It has a mind 'open to the sunlight and to the morning, open to new truth and new duty.' Its lost supporters are returning, even proud of their part in the awakening, and loyal and earnest for those principles which are ours to-day.

"The Republican Party has, through a primary, nominated its candidates on the State ticket to be voted upon this autumn.

"These nominees merit the best support of the voters of the Commonwealth not only because of their individual qualifications but particularly for the reason that their election as Republicans will be the most effective way of notifying the people of the United States and competing nations that the present Democratic political experiments hold no charm for us.

"A personal complimentary reference to each one of our State candidates would be fitting and agreeable to all of us, but time prevents.

"In the nature of things, our candidate for governor at once becomes our central figure for offensive and defensive political activities. He is so well know by the voters of this Commonwealth and of the Nation as well that extended statement about him is unnecessary.

"Because he has responded to the call of his party; because of his popularity with citizens of every shade of political opinion; because, above all, of his real worth, we shall battle offensively with all our strength for this man, Sam McCall.

"Our method of selecting candidates for office has evolved from the New England town meeting into the present primary system. Our voters undoubtedly hoped that through the primary whatever abuses there were in the caucus and convention system would be avoided, and they believed that the right to vote would be more generally accepted. Moreover, they thought that it would be fairer to the candidate of lesser means.

"Our trial of the direct primary in Massachusetts, however, has not been satisfactory, although it may be difficult to state offhand the form and nature of the changes needed. Modifications of the present system of nominating should be looked into thoroughly and, without undue haste, changes of the law should be made, seeking the same or better results which we so earnestly had hoped to accomplish by direct primaries. The present primary law if allowed to stand without change is ultimately likely to work great evil in our elections, as well as in party nominations.

"Massachusetts legislation in respect to public service, welfare of employees, labor laws, and kindred matters has been more advanced, persistent, and unrelenting in enforcement than has been the legislation of any other States or the Federal Government. The spirit of defense of human rights which placed our Commonwealth in the lead in Colonial and Revolutionary days, in the antislavery movement, and in all causes for humanity has always been in evidence in the discussion of plans for the betterment of our citizens, and none of us would care to see any let-down in the standard of such undertakings.

UNIFORM JUSTICE.

"Yet may it not be that we have been generous without being uniformly just? These developments in legislation have of necessity affected the rates of taxation and the cost of production within our Commonwealth. We rejoice with the beneficiaries for what they have received, and we hope constantly and intelligently to progress along these lines. It is a fact, however, that these frequent changes from one standard to another have caused great inconvenience and financial burdens, particularly when the competition comes from other States whose legislation has not to so great an extent borne down on those whose contribution to the public welfare comes through the useful and legitimate employment of capital.

"The present dull condition of business, with the vast number of people without normal income or even employment, demonstrates better than has been possible for years the fact that the well-being of the employed and the welfare of the employer are essentially one and the same thing and are dependent upon the same fundamental conditions.

"The capital interests of Massachusetts deserve great credit for the generous and hearty manner in which they have largely received and accepted all this legislation, even though it has tended to make operations more difficult and less productive. They must, however, consider their own ways and means. To-day the small as well as the large commercial interests of Massachusetts would like to have intelligent and thorough attention paid to their needs when further legislation is under consideration for the betterment of Massachusetts conditions. When we realize the interdependence of those of us who have only our daily toil and thought as capital, and those who have money to employ properly as capital, there seems to be every reason that Massachusetts, while defending jealously and rigorously the welfare of employed citizens, should be equally careful to safeguard the integrity of the capital interests.

"The present mayor of Boston and his immediate predecessor have both been echoing public feeling when they have been calling for a greater development of Massachusetts industry by a greater investment of Massachusetts capital, but for the continued development of Massachusetts industry capital must find Massachusetts a desirable State to locate and continue in.

"I am aware that it has not been popular to discuss these needs in political utterances or to refer to them save under the full pressure of the soft pedal. I yield to no one in loyalty to the welfare of my fellow citizens, yet it seems to me that the time is at hand when the discussion of legislative action should not be confined to the welfare and advance of this or that one clause, but, on the contrary, our aim should be to give full justice to all, ever mindful that the interest of one is the interest of all and that the best for all is the best for the individual.

INTERESTS IN COMMON.

"What a service will be rendered to mankind if the Republican Party make so-called capital and labor realize that their interests are common, but far better yet, demonstrate it practically by the operations of constructive legislation.

"The times are hard. Individuals and commercial interests know it. Retrenchment in the household and elsewhere is being

practiced by all sane people. In the face of these facts we are justified in demanding the establishment of absolute economy in our State and municipal governments.

"'We favor economy,' etc., has been the constant cry of parties and candidates for years without number, and yet the universal practice has been to the contrary. The reason for the failure is apparent. This community has favored the development of one thing, the next of something else, and so on. Honest people interested in a specific humane or public undertaking have sought appropriations and the strain upon legislators has been great. Expenses have increased, often for meritorious causes, frequently for purposes inspired by humane sympathy and sometimes for the indulgence of pride or artistic taste. Expenses have increased faster than valuations.

"We expect, of course, that our established institutions will be kept up; we would not suggest any backward move along the lines of public health, public education, and such essentials. On the other hand, municipalities and the State have been appropriating great sums of money, which, under ordinary circumstances, have not been in the line of economy, and in times like these present, and still at hand, can be described only by the word 'extravagant.' It is the time now, and everybody knows it, to cut off the nonessentials and appropriate only for the necessities.

"When our people are out of work, with no immediate show of improvement, at a time of reduction of small but necessary incomes, the citizens of Massachusetts have a right not merely to call for and expect, but to demand, a reduction in taxes instead of an increase, a conservation of financial resources and not an extension of obligations.

"At a time when the mother is obliged with her weary fingers to patch the clothing of the children, our Government must not force higher taxes and increased rents upon the father.

ECONOMY IMPERATIVE.

"In times like these the public servant should not be extolled for practicing public economy, but rather be morally condemned and politically ostracized if he doesn't.

"The national Democratic Party has in the last two years shown a brazen disregard for many of the pledges of its Baltimore platform. Minor violations may be passed over, but of some we must take notice.

"They declared:

"We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

"In the light of this year's record of unprecedented extravagances, passed and proposed, we commend the Democratic Party to the tender mercies of an all-wise Providence.

"An illustration of the extravagance and sectionalism of this administration is the pending bill before Congress for the development of rivers and harbors. The bill as passed by the Democratic House and as submitted by the Democratic Senate committee was not only one of the most lavish on record, but also the richest in hog product. Patriotic Republican Senators by arousing public indignation successfully attacked this proposed extravagance and so forced the Democrats to cut off practically two-thirds of their expected appropriation.

"This Democratic bill even provides for digging a well to make one Texas river navigable. The tremendous commerce of the rivers and harbors of New England was given scant attention. Alabama, Mississippi, and Florida were each to be given an appropriation almost equal to the whole amount proposed for New England. In a word, it was a comprehensive scheme of southern Senators and Congressmen to grab for their own. As one distinguished public man has said, its purpose was to irrigate rivers in the South.

BROKEN DEMOCRATIC PLEDGES.

"Their solemn declaration defending the integrity of the civil service seemed to ring true, yet every important act of this Congress has carried wholesale raid on the merit system, beginning with the income-tax collectors and continuing along the line to assistant postmasters.

"We believe—

"They declared at Baltimore—

"In the preservation and maintenance in their full strength and integrity of the three coordinate branches of the Federal Government—the executive, the legislative, and the judicial—each keeping within its own bounds and not encroaching upon the just powers of either of the others.

"This is evidently the joker in the pack.

"Time and time again Republicans in both Houses of Congress have sought information from their Democratic associates as to the attitude of the party in power on this or that legislation, almost invariably to receive the answer—

"We don't know; we haven't been told by the White House yet.

"There has been no legislative initiative. On the orders of the President the Democratic Members of Congress have been corralled in secret caucus and the bars put up. All the cross steers have been dehorned, and every one of the herd has been trained at the sign of the leader to 'moo-o-o.'

"The Democrats at Baltimore declared their hostility to gag rules in Congress. Their purpose, they said, was 'to give to the representatives of the American people freedom of speech and of action in advocating, proposing and perfecting remedial legislation.'

"Their unvarying procedure in actual practice is illustrated by their action on the most recent important measure in Congress, namely, the so-called war-tax bill. In the House of Representatives they adopted a rule prohibiting perfecting amendments and limiting the time of debate to 420 minutes for 433 Members. Mark well the living example of the Democratic idea of 'freedom of speech.' But then it only involved a mere hundred millions of dollars.

"Not only did the Baltimore platform expressly pledge the Democratic Party to support the policy of free tolls for American coastwise shipping passing through the Panama Canal, but furthermore the candidates of that party loudly exploited the policy through their entire campaign in every State of the Union.

"The causes of the complete reversal of the present Democratic administration and its adoption of full-charge tolls for American shipping needs to analysis here; the simple fact of their turn about is sufficient to show why the public should distrust any pledge they may make.

LIVING COST STILL UP.

"The Baltimore platform dangled before the people of the United States an assurance of a reduction in the high cost of living. During the first year following, to all demands for the expected relief their answer was, 'Wait, we will soon pass the necessary legislation.' Later on their answer became less assuring. Further on they floundered and side-stepped, until war was declared in Europe. And since that day, from one end of the country to the other, they have flippantly pointed to the war as the cause of the continued high cost of living.

"No sensible man will accept such excuse. Every head of a household in the United States knows what the high cost of living was in July and June and May and April of this year and last year and will not be buncoed.

"Of all their promises and pretensions in the Baltimore platform, this indeed was the extra blank card in the deck.

"It has for some years been the fad to get after business methods through legislation. Without doubt there was reason for the initial steps in this direction, but in the process of time legislation has been sought and passed covering one grievance or another, real or imaginary, until now it almost seems as if the purpose were to make it impossible for commercial enterprises, already injured or paralyzed by other causes, to pick up their broken threads and go on.

"Methods of production, distribution, and selling, on which many concerns have been built up and carried on with little complaint from anybody are to be rendered inoperative. The effort now does not seem to be alone to correct real abuses, but even to stir up imaginary troubles for purely political capital.

"I can sum up the situation no better than by a quotation from a recent utterance on the subject by Hon JAMES R. MANN, Republican leader in the National House of Representatives:

"Let us take the restraining hand of government off proper business enterprise and tell our people to go out and get the trade and that we will bless them for it, instead of awarding threats of penitentiary sentences.

"Fortunately for the American people, just at this time when political follies can receive their deserts, the Democratic Party has unhappily advertised itself to the voters of the United States by proposing an enormous tax, the direct and inevitable result of their two years of absolute direction and control of national legislation.

"They can not longer escape the consequences of their Underwood tariff law, their commercial legislation, and there all-around extravagance, all component parts of their administrative incapacity.

"'At the present hour they are trying to force through the Congress of the United States a long string of new taxes, which they slyly call a war tax, but which might more properly be called a folly tax. They seek to raise by special forms of taxation similar to those which paid for the whole Spanish War more than $100,000,000 in one year, of which Massachusetts people will pay upward of three and a half millions, and they

would have us believe that it is necessary because of reduced revenue owing to the European war.

LOW TARIFF A FAILURE.

"While operations of their tariff law vastly increased our purchase of goods from abroad up to the beginning of the European war, its lowered duties failed to produce sufficient revenue to run the Government for the same period. Not only did we lose all the benefits of production, but meanwhile the Government was losing the revenue.

"Now, when they have brought an industrial depression on the country, have rendered constructive and productive enterprises unprofitable or worse, and have cursed willing hands with idleness, they boldly and unfeelingly deny the condition and proceed to add to the already existing burdens a great special tax to pay for the folly of their legislative indiscretions.

"Oh, 'None so blind as those who will not see!'

"They could get along without this new tax imposition if they would. The way has been pointed out to them. But the President has ordered the passage of the bill, so push it along they must.

"Economy interests them not; extravagance delights. The President asked Congress to make appropriations this year which in amount are a hundred million dollars more than President Taft had asked. Their own chairman of the Committee on Appropriations, Mr. FITZGERALD, of New York, has characterized their expenditure of public money 'a horrible mess.'

"With one single and inconspicuous example each annual supply bill passed in this administration has been the largest one of its class on record, and the total has exceeded the corresponding Republican appropriations by more than $100,000,000 for a year.

"In one conspicuous case, for which we are thankful, namely, the rivers and harbors bill, public indignation has forced them to drop the modest sum of $33,000,000, an amount equal to one-third of what they thus far admit they propose to raise by what they call a war tax.

DIGGING HOLE DEEPER.

"From the standpoint of political expediency, of legislative capacity, of intelligent administration of the Nation's business, the Democrats are in a hole. Their idea of salvation seems to rest in digging a bigger hole.

"Important as other issues are, for all practical purposes the tariff is the one living issue in the coming campaign. Democratic tinkering with the tariff is alone responsible for the economic woes which are oppressing us to-day.

"It is the Democratic theory that a tariff should be imposed on imports to as small a degree as possible, in order that people may buy their supplies at the lowest possible cost, regardless of how and where they can earn money to make their purchases.

"Republicans believe in levying protective duties upon imports sufficient to represent the difference in the productive cost of goods here and elsewhere, not with a view to enabling us to purchase goods at the lowest price in the open markets of the world, but rather to provide opportunity for our people to earn enough money to buy what they need.

"In other words, Democracy says, 'Get goods at the cheapest possible prices and get money to pay for them if you can.'

"Republicanism says, 'Provide the opportunity to earn enough money with which to buy at American prices, for each citizen to pay his share of public expenses, and to lay away a bit now and then for a rainy day.'

"This administration, in order to save a few paltry dollars, has even been willing to buy bunting for the flags of our Navy from foreign manufacturers.

"The Democrats have always insisted that the United States need not fear foreign competition because American workers individually produce more than foreign workmen. Until recently such did seem to be the case, but more lately the foreign manufacturer has been buying American machinery until now foreign workmen are producing as much man for man as workmen here. Worse yet, they have copied our machinery, in some instances they have improved upon it, and are now offering it in this country for less than our prices for the same machines.

"The Democratic idea of the tariff is a mere academic proposition and when tried has always failed.

"The Republican policy is the resultant of hard-headed, successful experience.

"The test of the pudding is in the eating. We had been joyously eating our pudding for 50 years save during one brief but disastrous Democratic period. Another Democratic tariff is now in force. To-day, on its first anniversary, we are eating crow, and the taste of pudding is but a constantly dimming recollection.

"Well, indeed, were the effects of the Underwood bill foreseen by a Democratic Congressman, formerly comptroller of New York City, a successful business man, who twice said to me in the presence of several colleagues during the discussion of that bill: 'No northern business man has any right to be a Democrat in national politics.'

"Does it seem possible that intelligent men, with men's obligations, will be willing for another unnecessary moment to put faith in the hatchings of the Democratic incubator?

TIDE NOW TURNED.

"I do not believe they will. They surely will seize the opportunity of the November elections to reestablish the sound fundamentals of prosperity which have been wrecked by the passage of tariff legislation directly contrary to the declared belief of a majority of the voters of the United States.

"Under the present Underwood tariff law we have seen for the first time in 20 years, for the first time since the soup-house period of 1894, a balance of trade against the United States.

"During the 20 years up to 1914 the balance of foreign trade in our favor was enormous, running around half a billion dollars a year. Since the Underwood tariff law was passed, and under the benign guidance of a Democratic administration, our imports have been increasing and our exports have been decreasing, until April of this year, when we at last bought more than we sold, and we have so continued ever since.

"In the first seven months of this year, right up to the beginning of the unexpected European war now being waged, our imports had increased and our exports had decreased, compared with the year before, to a total value of a quarter of a billion of dollars. This means that a quarter of a billion of dollars of production and work has been lost to the United States, and that all the benefits of such have gone to foreign producers, to support foreign people and maintain foreign institutions.

"Will not one of the numerous Democratic tabulators and expounders of hitherto undiscovered facts kindly point out the advantage accruing to the people of the United States under this system?

"Democratic leaders are trying hard, oh, so hard, to divert attention from the mess they have made, by proclaiming loudly that there are no hard times; that the record of unemployed is all a myth; that the industrial depression is 'all in your eye.' They reject the keen words of a preceding Democratic President, who said, 'A condition, and not a theory, confronts us.' It's psychological, they say.

"They say that only the rich, only the money-grabbers, only the predatory interests which control the heartbeats of common men can discover any misfortune among our people.

"What has this administration to say to the fact that in this city of Worcester in the early summer of this year 700 men were clamoring at 7 o'clock one morning for jobs when 50 men were wanted to dig a cellar?

"What has this administration to say of the report by the State employment bureau in Boston, that on one day last winter it had 2,960 applicants and only 86 jobs, and that labor conditions have been the worst in years?

"What has this administration to say of the official statement of the International Molders' Union of America, published on page 654 of the August, 1914, number of their official magazine, the International Molders' Journal, namely, that 76,262 'out-of-work stamps,' which means remission of dues, were issued to its members in the first six months of this year, which is 19,047 more than were issued in the whole 12 months of 1913?

"What has this administration to say of the determination of the labor unions of New York City in the early summer to abandon for this year their annual Labor Day parade, in order to give the funds to the unemployed?

"Two years ago ours was a highly prosperous country. Positions of employment were seeking people to fill them. Well-provided men, women, and children attested our thrift and abundance. To-day we are without business. The unemployed are on every hand. Incomes have greatly diminished and in many instances have disappeared. People vainly seek work. The unemployed signalize our depressed condition and the finger of want has long since pointed only to the gaping maw of uncertainty and lost confidence.

"No need to seek the cause. A Democratic administration has meanwhile been pouring forth its sweet-smelling but none the less asphyxiating gases over all our commercial life.

"It would be easy indeed to continue this gruesome recital of destructive legislation and its fearful results in the short period of 18 months. I have pointed out enough to establish cause and effect.

G. O. P. STANDARD.

"What have we to say for the Republican Party, to tell the voter why confidence should be reestablished in the Republican Party and power again placed in our hands?

"We are a party which believes that the strong hand of the United States should be above our citizens in foreign lands as in benediction in time of peace and protection in time of storm.

"We are a constructive party. We have never broken down our institutions. We are a party which believes in the welfare of our own country and of all who are of us by birth or adoption. We are a party which frankly believes in fostering our home industries even at the expense of industries abroad.

"We are interested in having the wheels of industry in the United States turn merrily and regularly and profitably.

"We want every laborer within our borders to have constant employment at a liberal wage.

"We want every man in the United States who has ingenuity or capital to be encouraged in working out and developing original ideas, in increasing production, and in extending our national business.

"We want the United States to kill off the forces of depression and of deadening repression and to lead the world in ambition, in energy, and in pioneering, fearless, buoyant progress.

"What better place than in this hall to lay the foundation for the unity of all Republican brothers?

"Here have been held conventions of united Republicans in the stormy period of the sixties. On the side walls of this hall are the faces of Republicans—Andrews, Wilson, and Garfield—in whose eyes I now see expressions of hope and confidence that a united Republican Party will at once come to its own and again be responsible for the welfare of our people.

"In addition to the inspirations from these great accomplishments of Republicans we are all under the spell of those who in their time and since have been the supreme examples of all that is great in the life of our Republic—George Washington, the Father of his Country, on my left, and on my right Abraham Lincoln, the most distinguished of our faith and the most glorious in his belief in the rights and wisdom of the people.

"In such atmosphere in these critical days let us rise to our responsibilities and go forth from this historic hall determined to do our best for our own, our country, and our God."

Review of Our Endeavors to Secure Progressive Legislation—The Progressive (Washington) Party Legislative Program for Pennsylvania—An Honest Effort Made to Carry Out Our Covenants With the People.

EXTENSION OF REMARKS

OF

HON. ARTHUR R. RUPLEY

(PROGRESSIVE CONGRESSMAN AT LARGE),

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 1½, 1914.

Mr. RUPLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a review of the endeavors of the legislative committee of the Washington Party to secure progressive legislation in Pennsylvania.

THE LEGISLATIVE PROGRAM FOR PENNSYLVANIA.

At the 1913 session of the Pennsylvania Legislature the Progressives stood solidly for the following bills, which were defeated by the Penrose combination controlling the senate:

FIRST. WORKMEN'S COMPENSATION BILL, PREPARED BY THE STATE INDUSTRIAL ACCIDENTS COMMISSION.

SECOND. CHILD-LABOR BILL, PREPARED BY THE LEGISLATIVE AND EXECUTIVE COMMITTEE OF WHAT IS NOW THE WASHINGTON PARTY.

THIRD. MINIMUM-WAGE BILL, PREPARED BY THE LEGISLATIVE AND EXECUTIVE COMMITTEE OF WHAT IS NOW THE WASHINGTON PARTY.

FOURTH. CORRUPT-PRACTICES BILL, PREPARED BY THE LEGISLATIVE AND EXECUTIVE COMMITTEE OF WHAT IS NOW THE WASHINGTON PARTY.

FIFTH. AMENDMENTS TO ELECTION LAWS, PREPARED BY THE LEGISLATIVE AND EXECUTIVE COMMITTEE OF WHAT IS NOW THE WASHINGTON PARTY.

Progressives in the State are still united in their determination to work unceasingly for the passage of these laws. All of these bills are essential to the welfare and happiness of our people. They were all passed by the house of representatives in 1913; they were all defeated by the Penrose machine in the Senate.

FIRST. WORKMEN'S COMPENSATION.

Compensation laws are now in force in Europe, in England and her colonies, and in 22 of our States. Had the bill defeated by the senate in 1913 become law, it would have given—

(a) To those dependent on a workman killed at his employment compensation varying according to the wages which he had been earning and the age or relationship of his dependents. For example, a widow without children would have received one-quarter of the previous wages of the deceased; a widow with five children under 16 would have received 60 per cent of the wages. The widow's compensation would have continued for six years or until remarriage; that of the children until they attained the age of 16.

(b) To a workman totally disabled for less than six years by injury at his employment, half wages; if totally disabled for more than six years, he would have received one-half wages for six years and 40 per cent thereafter.

(c) To a workman partially disabled at his employment, one-half the difference between his wages at the time of the injury and the wages he could make thereafter.

In order to make absolutely certain the payment to the workman or his family of the compensation granted an act should be passed requiring the employer to insure. Under proper regulations the employer should have his choice between State insurance and insurance in private companies, mutual or otherwise.

State insurance would give to the employer insurance at cost. The insurance rates in private companies under the act proposed in 1913 would not have exceeded, including hazardous industries, 2 per cent of the pay roll; for domestic employment and nonhazardous industries the rate would have been about 1 per cent.

SECOND. CHILD LABOR.

The bill defeated by the Penrose machine in the 1913 session of the senate would have prohibited the employment of children under 16 for more than 8 hours a day or 48 hours a week, and before 7 o'clock in the morning or after 6 o'clock in the evening. It would also have prohibited the employment of minors in the messenger service after 8 o'clock in the evening.

Our present child-labor laws are a disgrace to the State. They permit all children over 14 and under 16 to work 10 hours a day. Girls under 16 may lawfully be employed 54 hours a week; boys, 58. Our laws still tolerate the night work of little boys in glass factories, and permit minors to be employed in the messenger service during hours when their work familiarizes them with vice in its most revolting form.

Medical science assures us that it is absolutely injurious to children under 16 to work longer than eight hours per day or during the nighttime. Therefore many States, including the great industrial States of New York, Ohio, Massachusetts, and Illinois, have limited child employment to eight hours, and not one great industrial State permits children to work at night.

Pennsylvania is the great child-employing State of the Union. We employ as many child workers as New York, Ohio, and Illinois combined—twice as many as New York—and yet our laws legalize conditions which injure the health and blight the development of our future men and women.

The defeat of the child-labor bill by the Penrose machine was a reproach to Pennsylvania. There is no measure so important to the future of the State as this one. More than anything else we need a race of strong men and women. We can not afford to overstrain little children at the critical age of their development.

THIRD. MINIMUM WAGE.

We must have a minimum wage law for women. A business which utilizes the full working time of a woman of fair ability should pay her at least a living wage. Every investigation has shown that the wages of large numbers of working women will not support them in reasonable health and comfort. A large majority of the working women in Pennsylvania earn less than $300 per year, or an average of $5.75 per week, while it is impossible to support life in reasonable health in a city like Philadelphia on less than $7.80 a week, or in a city like Lancaster on less than $6.75.

The bill defeated in the 1913 senate would have established a commission to fix the minimum wage for a full day's work in the different industries in which women work. The commission would have fixed a wage rate for work measured by time or piece, so that this law would have become the best weapon with which to combat the evils of the sweatshop.

We believe in prosperity, but we must remember that prosperity depends not only upon a large material production, but also on an equitable distribution of wealth among those who contribute to its creation.

FOURTH. CORRUPT PRACTICES.

The corrupt practices act, defeated by the Penrose machine in 1913, would have limited the amount of money which candidates or their friends might spend in primary or election campaigns. For example, a candidate for governor would have been forbidden to spend more than $10,000; a candidate for senator, more than $1,000. The law was so framed as to make evasion by the formation of "protective unions," or otherwise, virtually impossible. It also included provisions for the publication by the State of an official voter's pamphlet, a copy of which would have been mailed to every registered voter two weeks before election. Not only would this pamphlet have permitted every candidate for office to bring his appeal directly home to the voters, but it would also have given any person objecting to the nomination or election of a candidate an opportunity to state his objections and have them presented to every voter—not merely those who subscribe for a particular partisan newspaper. The expense of issuing the pamphlet would have been borne in part by the respective candidates.

Such a law would be a great step toward clean politics, and the Washington Party heartily indorses it.

FIFTH. AMENDMENTS TO ELECTION LAWS.

One of the amendments to the election laws defeated by the Penrose machine in 1913 would have made it impossible to "assist" a voter unless physically incapable of seeing or marking his ballot. Other changes would have made violations of the election laws felonies punishable by imprisonment. These provisions are essential to the conduct of honest elections.

PART OF A NEW PROGRAM.

The Washington Party favors the prompt repeal of the primary enrollment law passed by the Penrose machine in 1913, and the passage of a nonpartisan ballot law for all local officers.

LOCAL OPTION.

The Washington Party believes firmly in home rule in local government, and we therefore earnestly favor a local-option law, with the county as the unit, to permit the people of each locality to decide whether the sale of liquor shall be licensed in their community. The saloon is an economic and social evil. It is a dead weight; a chain about our necks in the struggle toward better things.

The Washington Party favors local option rather than prohibition, because prohibitory laws are effective only when they have behind them a definite public sentiment. Local option will give every community the right to decide for itself whether to permit the sale of liquor, and the community which votes against liquor will see that its law is enforced.

PUBLIC UTILITIES.

The public-service commission measure which passed the house at the 1913 legislature was a good measure. The Penrose machine in the senate adopted without any consideration every amendment suggested by the public-service corporations, and succeeded in having many of these amendments incorporated into the bill as finally passed. The present act should be promptly restored to the form in which it originally passed the house. In particular among other amendments, the following should be adopted:

First. The commission should be given the right to regulate joint rates and joint routes for street railways exclusively engaged in passenger traffic. This power is now denied by provisos to article 5, section 8, and article 3, section 1 (s).

Second. The commission should be given power to supervise the right of existing companies to build branch lines or extensions. At present any company may procure an exclusive right to build an extension or branch line over particular streets by filing with the recorder of deeds of the particular county and the secretary of the Commonwealth a resolution indicating its intention to build the extension or branch line (act of 1889, as amended June 9, 1901, P. L., 514). Accordingly, any utility can easily prevent other companies from building branch lines or extensions even though it has no bona fide intention of ever building them itself.

Third. The commission should be given the right to compel the joint use of facilities, especially terminal facilities. There is no reason why the first utility in the field should have an exclusive right to the use of the only convenient terminal street or site in a town or city.

Fourth. Under the act as amended in the Senate a municipality can not operate its own public utilities unless (a) the existing utilities are willing to sell their plants to the municipality or (b) the State commission believes that there is need for additional service, and grants to the municipality permission to erect additional plants. This is vicious. Municipalities should always have the right, if they choose, to operate their own public utilities. Whether municipal ownership is wise or unwise depends on local conditions, but any municipality which desires to operate its own utilities should certainly have the right to do so, on buying out existing plants at a fair appraisement.

Fifth. Public-service companies may always charge a "reasonable rate" for the services rendered. This means the legal rate of interest on the capital actually invested. Under the Pennsylvania act, as amended by the senate, the value of the franchise granted by the State may be included in the elements considered in computing reasonable rates. In other words, the people may be made to pay interest on the monopolistic privilege they have granted. This is obviously unfair to the public and should be corrected.

PENSION LAW.

The Washington Party believes that the State should provide for the emergency men of 1863, who went to the defense of the State and the Nation at the call of the governor during the Civil War, who are not pensionable under the Federal laws.

EXTENSION OF REMARKS

OF

HON. RALPH W. MOSS,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914.

Mr. MOSS of Indiana. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech made by Representative MORRISON, of Indiana, before the convention that nominated him for Congress.

SPEECH OF REPRESENTATIVE MORRISON.

Mr. MORRISON. Mr. Chairman, representatives of the eight counties of the ninth congressional district, ladies and gentlemen, six years ago yesterday, in the city of Kokomo, the Democracy of the ninth district gave to me my first nomination. No Democrat had ever been elected from the district, although strong men had been nominated and had made aggressive and effective campaigns. Defeat did not mean that they did not deserve to win. It only meant that success was not yet possible.

It soon became manifest that the Democrats and Independent Republicans of the district desired my election and had set themselves to the task of its accomplishment. They only asked of me that I give my full time and energy to the campaign. This I resolved to do. After the day of the convention I accepted no further professional employments. After the election I withdrew from such as I had accepted before the convention. I have, therefore, given all of my time for six years to the work of the three campaigns in which I have sought election as your Representative in the Congress of the United States and to the study and performance of the duties of the office.

I had learned before the time of my first nomination that candidates do not elect themselves, nor does the question of their election depend upon the work they do in carrying on the activities of the campaign. The most that a candidate can do is to assume such an attitude toward public questions as will not put his friends on the defensive, but will leave them free to make all their energy effective in the affirmative features of the plan of campaign. Fortunately, the time had just come, in 1908, when it was possible for a candidate to accept a Democratic nomination, declare freely and frankly his attitude toward the questions then uppermost in the public mind, fairly meet the desires of the delegates that nominated him, and yet be in substantial harmony with the personal convictions of practically all of the voters of the district who were affiliated with other political parties.

For the success with which my friends have three times presented my candidacy to the voters of the district, I neither deserve nor claim credit. No other candidate for public office ever received such loyal and unselfish support before the election nor such disinterested and helpful suggestions and cooperation after election. Those who approved have praised without stint and those who have differed with me have judged with leniency and given to me the benefit of every favorable presumption. It is often said that a man in public life sees the weaker side of human nature and is sure to lose faith in his fellows. I have but limited knowledge of conditions as they existed prior to April 22, 1908, but the six years that have passed since then have revealed to me the nobler side of the men of the ninth district of Indiana and have given to me a firmer faith in my

fellow men, together with a higher hope for the continued advancement of genuine reforms and for the essential integrity and stability of free institutions. My immediate predecessor was accustomed to say that there is not among all the congressional districts of the Republic another one that is the equal of the ninth district of Indiana, measured by all the elements of agricultural, manufacturing, industrial, financial, and commercial advantages and values. His statement was and is literally true. I add to his words the further statement that there is no other district in which the activities of political parties are so nearly free from just censure.

To be permitted to represent a constituency in the House of Representatives of the Congress of the United States is a privilege for which any right-minded man must be grateful. To be permitted to represent the district that excels them all in the elements that go to make a community great and prosperous, an inviting place in which to earn a living, and an ideal place in which to live—this constitutes a privilege for which one must have a sense of gratitude beyond the power of words to express.

For the honors which the people of the ninth district have conferred upon me I owe a debt of gratitude that I can never hope to repay, and have a sense of gratitude that is keen, deep, and abiding.

For the ungrudging favors which the Democrats of the district have showered upon me I have expressed many times my unbounded thanks. For the great honor of this day's nomination I can only say out of an overflowing heart that I thank you one and all, and pledge to you an earnest, honest effort to become more nearly worthy of the favors you have so generously bestowed.

In the campaign of 1908, both of the great political parties were pledged to revise the tariff downward. The people chose the Republican Party as their agent to accomplish the work. The result was the Payne-Aldrich tariff law. Of the more than 4,000 items of the Dingley tariff law the greater number were reenacted without change. Some items were given higher rates and others were given lower rates. When the new law was approved by the President, experts began to calculate the increases and decreases in the rates. The Republican experts reached the conclusion that the average of the rates was slightly lower, and the Democratic experts reached the conclusion that the average of the rates was slightly higher than in the Dingley law.

In the campaign of 1912, the Republican Party asserted that it had revised the tariff downward, and the Democratic Party promised that it would revise the tariff downward. The Republicans asserted that a revision of the tariff by Democrats would bring industrial stagnation and disaster, with falling prices and decreasing values. They had really come to believe that the prosperity of this most favored land under the sun rests on the narrow and insecure foundation of the customhouse. It was our contention that our prosperity rests upon the broader and more permanent foundation of our unequaled wealth of natural resources, together with the inventive genius, integrity, industry, and frugality of 100,000,000 Americans.

The Democratic Party was chosen to do the work in which the people believed that the Republican Party had failed. The result was the Underwood tariff law.

The panic that was prophesied did not come. The business of the country anticipated that the Democratic Congress and President would do substantially what was done and adjusted itself to the new law before it went upon the statute books.

No tariff law ever completely satisfied even those who wrote it. Every thoughtful man is sure to disapprove portions of any tariff law that is passed. He would prefer that some rates be increased and others decreased. The manufacturers of the country have learned that a high tariff is not necessary to enable them to continue in operation. Even the woolen mills, that offered such unanswerable evidence that they could not operate under lower tariff rates, find the orders coming thick and fast and are running full time with the old organization and employees. The business of the country found it easy to adjust itself to the new law. Capital and labor will no longer hesitate to work out needed reforms because they fear that a change of administration will result in a revision of the tariff and that a revision of the tariff will bring industrial disaster. The minds of men have been freed from the narrow restrictions which baseless fear had cast about them.

I voted for the Tariff Board. I had talked with manufacturers, who said that an investigation of the facts would show that our industries, whatever may have been the situation in the past, do not now rest on the customhouse, but, rather, upon the Patent Office, upon American inventive genius, upon the most improved and efficient machinery in the world, and the willingness of American laboring men to adapt themselves to new conditions, to use labor-saving machinery, and in every way to increase the output of the mills of the country, so long as their wages are reasonably increased and the American standard of living can be maintained.

The commission reported on the woolen and cotton schedules. The facts which they learned and reported show that the statements which had been made by the manufacturers above referred to were true. It proved that there is no such thing as a domestic cost of production and a foreign cost of production—the cost of production in the several domestic mills differing as widely among themselves as the domestic and foreign mills differ from each other. That fact and the fact that our industrial supremacy rests on our improved machinery and the intelligent and sympathetic attitude and action of American laboring men expose and set at naught, for this generation at least, many economic heresies that had gained considerable credence among the advocates of high tariff rates. Many men who did not desire a revision of the tariff law approve the course of the Democratic Party in working out the manifest will of the people. They are patriotic rather than partisan. They abide cheerfully the decision of the majority and earnestly hope that the fears they so long entertained may prove to have been ill founded. In a broad sense, therefore, the Congress, including practically all the Democrats, the larger half of the Progressives, and many regular Republicans, have the approval of the people upon the Underwood tariff law for which they voted.

For many years the people of this country have believed that new legislation should be adopted to give our currency the element of elasticity which it so greatly needed. For more than half a century the House Committee on Banking and Currency has been unable to draft a reform measure on which the members of the committee could agree long enough to report it to the House for consideration and action.

The Monetary Commission, of which ex-Senator Aldrich was the chairman, was appointed to investigate the entire monetary and currency question, and to report its findings and recommendations to the Congress. It did much effective work and produced or compiled for American students of the currency question a library of unprecedented scope and value among our public documents. It prepared and tendered to the public the Aldrich currency bill. The public read the bill and rejected it. It appeared to many that the commission had expended public money to no purpose. Such, however, was not the case. The people of the country had studied the question as never before. They desired legislation that would be genuinely constructive and remedial. When President Wilson came to the White House he found all conditions favorable to the consideration of the currency question and the preparation and enactment of a new law that would bring into our currency system the elements which all students of finance had agreed upon as vital. The President put the force of his wonderfully clear intellect and his immense popularity behind the movement. The committees of the House and Senate gave to their duties the most patient, persistent, and efficient labor. The bill was made a party measure only in a limited sense. It was in reality the product of the joint study and labors of men of all political parties. In both Houses it received the votes of practically all Democrats, but it received also the votes of so large a portion of the Republicans and Progressives as to rob the law of every semblance of partisanship.

The people of the country, including the bankers, regardless of their attitude toward the measure while it was a pending bill, have accepted the new law in a patriotic spirit. They all desire it to be a great success. They are all earnestly endeavoring to make it so. No one would now willingly make our currency system a political issue. It is the universal hope that the new law may be the basis of our currency system for many years, subject only to such slight amendments as time and experience may suggest.

No Federal law can set at naught the laws of mathematics nor stop the operation of the law of cause and effect. In the future, as in the past, the man who spends more than he makes will become bankrupt. The man who tries to live by his wits and to eat his bread in the sweat of the faces of other men will come to grief. The man who takes the hazard of speculative transactions will be in constant danger of financial disaster. These are evils for which Congress can furnish no remedy.

The new currency law is intended to vitalize the credit of the country, to make the volume of currency respond to the varying needs of business, and to make it unnecessary for a solvent banking institution to close its doors or even curtail the business activities of its patrons on account of the financial disaster that has come to other banks in the hands of dishonest

or incompetent officers. If the new law shall safeguard the honest and prevent disaster to the industrious and competent it will prove to be one of the most beneficial measures enacted in this generation.

Time would fail me to speak of all the reforms that have been accomplished in recent years. In less than three years the Constitution of the United States has been twice amended, once to give the Federal Government the power to levy an income tax and again to provide for the election of United States Senators by direct vote of the people.

The rules of the House of Representatives have been so amended that the majority of the Members of the House can control the action of the House. Prior to March 4, 1911, no bill could pass the House against the will of the then Speaker, the then Republican floor leader, and the then chairman of the Committee on Appropriations. A few days ago the House passed the bill that is backed by the President to repeal a statute providing for what is commonly referred to as "free tolls." The Speaker of the House, the Democratic floor leader, the chairman of the Committee on Appropriations, and the chairman of the congressional campaign committee all joined in a determined fight against the bill, but the majority of the Members of the House proceeded to work their will with due deliberation, but without unreasonable delay.

Some one has said that the new rules have only transferred autocratic power from the Speaker and floor leader to the Committee on Rules. A few weeks ago the Committee on Rules decided that it would not report a rule for the consideration of a resolution to investigate conditions in the mining districts of Colorado and Michigan. The Democratic Members of the House instructed the committee to report a rule, it obeyed and the investigation was ordered by the House.

So far as the House of Representatives is concerned, power has been restored to the representatives of the people, and they are able truly to voice the sentiment and vote the will of their constituents.

I do not claim that the new order of things is a partisan Democratic victory or achievement. It is true that the reforms accomplished received the votes of substantially all Democrats and received most of their votes from Democrats, but many Republicans, insurgents, and Progressives aided by voice and vote. The new order is the result of the increased interest of the people in public affairs and an aroused public conscience.

Just now a great deal is being said of the proposed repeal of certain statutory provisions for the exemption of vessels engaged in our coastwise trade from the payment of tolls to the Government for passing them from deep water to deep water through the Panama Canal. The exemption or free toll act was passed in the summer of 1912 by a Democratic House and a Republican Senate. The bill to repeal it was introduced the day it became a law.

On March 5, 1914, the President read to the Congress a special message urging the repeal of free tolls, on the ground that the present law is a mistaken economic policy and is also a violation of our Panama Canal treaty with Great Britain, commonly called the Hay-Pauncefote treaty.

On March 31 the repeal bill was passed by the House and is now in the hands of a committee of the Senate.

Several arguments have been urged in support of the policy of free tolls. None of them will bear close examination.

It is said that free tolls will tend to encourage and rehabilitate our merchant marine.

The exemption is limited to vessels engaged in our coastwise trade. Our coastwise trade has been a legalized monopoly for almost a century—more than 99 years. As you will recall, our coastwise trade is that traffic by water transportation which begins at one port of the United States and ends at another. No foreign vessel is permitted to carry freight or passengers between any two ports of the United States. No other nation has so great a coastwise trade, so many vessels engaged therein, or vessels so fine and well equipped. No other American enterprise is more prosperous and profitable. Surely no advocate of the general policy of ship subsidy can justify its application to the coastwise trade.

It is urged upon the people living on the west coast, the east coast, and the Gulf that they will get the benefit of the exemption in the price of the merchandise carried through the canal. If that be true, it is the taxation of all the people for the local benefit of a few. It is not a sure thing that the people of the two coasts will get the benefit. The expert who represented the shipowners before the House committee testified to the character of the goods to be carried through the canal in coastwise vessels. He gave its value and selling prices. The amount of the tolls as fixed by the Government is $1.20 per net ton. He was asked to trace the $1.20 per ton out to the price to be paid by the retail purchaser. He frankly admitted that it could not affect retail prices, but insisted that it would encourage the owners of the ships.

It is said that "we" paid for the canal and ought not to charge tolls to "our own" vessels. The expense of the canal was paid, and is to be paid, by 100,000,000 of American citizens, and they will be taxed to maintain and operate it.

The vessels belong to a very few rich men, firms, and corporations. The "we" who pay the taxes are not identical with the "we" who own the ships. There was never a clearer case of special privilege at public expense.

It is said that exemption or free tolls is not a subsidy out of the Public Treasury.

The canal was estimated to cost $145,000,000. It is known now that it will cost at least four hundred millions. I fully expect it to cost five hundred millions. Shall we ever get back the money paid with interest? Everybody thought so when the work began. No one thinks so now. I heard Col. Goethals say in a public address that the only way to avoid a showing of financial loss will be to charge off the entire cost of the canal to national defense the day the canal is finished. That means, of course, that we can not hope to get back either principal or interest.

On March 31 Hon. JAMES R. MANN, Republican floor leader, said in a speech on the floor of the House that the Government will never receive back either principal or interest of the cost of the canal.

The annual expense of maintenance and operation of the canal will be many millions of dollars. The actual cost to the Government of passing a vessel through the canal will run from $1,500 to $4,000. The only possible source of revenue is the tolls charged for the Government's service in passing vessels through the canal.

It is manifest that exemption is as clearly a subsidy out of the Public Treasury as the payment therefrom upon proper warrant. Surely the taxpayers of the country will not consent to be taxed every year to pay expenses rightfully chargeable to this rich and powerful monopoly.

At last the advocates of free toll assert that it will force a decrease in railroad rates on the transcontinental railroads. If that be true, it but adds to the injustice of the proposition. The whole people will pay not less than $500,000,000 to save to vessels engaged in carrying goods from ocean to ocean 8,000 miles of travel. The tolls as fixed are but the nominal sum of $1.20 per net ton. The benefit commercially can hardly reach east of the Rocky Mountains or west of the Allegheny Mountains. The people of the interior can not hope to share in the commercial benefits. If the railroads are forced to make lower rates, it will affect only such traffic as begins or ends at the seaboard. It is a matter of common knowledge that the total revenues of the railroads is scarcely equal to their necessary current outlay. If less revenue is to be derived from traffic beginning or ending at the seaboard, more revenue must be derived from traffic beginning and ending in the interior. They ask us to give them the free use of the canal in order to reduce freight rates to them and increase the rates which we ourselves must pay.

As an economic proposition free tolls is unwise, unjust, and utterly indefensible.

The defenders of ship subsidy have attempted to raise the issue of alleged cowardice and unpatriotic surrender of American rights to foreign nations.

Special privilege appears in many forms, but it is always actuated by the same spirit and uses the same methods. It holds allegiance to no political party, although it seeks to control them all. It is true to no country, although it seeks to plunder them all. It attempts to coerce the party in power by threatening to cast it out. It seeks to control the party that is out by promising to restore it to power. It always masquerades in the garb of pretended patriotism and with much pomp and ceremony wraps itself about with the flag of the country in which it is operating whenever it is preparing to plunge its arm into the Public Treasury.

The present controversy, so far as the treaty is concerned, grows out of the fact that the President and Secretary of State find themselves charged with the duty of carrying into effect the following provision of the Hay-Pauncefote treaty, which President McKinley began to negotiate, but which was completed, ratified, and proclaimed under President Roosevelt:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

The language of the treaty gives no support to the contention of those who seek to exempt from its provisions the vessels engaged in our coastwise trade. A study of the history of our negotiations with Great Britain in relation to the Isthmian Canal makes it entirely clear that such exemption is a violation of our solemn contract.

In 1850 the United States and Great Britain entered into the Clayton-Bulwer treaty, by which it was agreed that the two Governments should jointly build, control, own, and operate a canal across the Isthmus. By section 8 of the treaty it was agreed that the canal should be open to the citizens and subjects of the United States and Great Britain upon equal terms, and should be open on like terms to the citizens and subjects of every other nation.

The Clayton-Bulwer treaty remained in force until it was superseded by the Hay-Pauncefote treaty, by the express terms of which the general principle set forth in said section 8 is carried forward and continued in full force and effect.

A Democratic President and Secretary of State are charged with a duty growing out of certain treaties negotiated by Republican Presidents, Secretaries of State, and ambassadors to Great Britain. Not in more than half a century had any Democrat been officially connected with any of the negotiations between the United States and Great Britain which resulted in the Hay-Pauncefote treaty.

In 1881 President James A. Garfield initiated negotiations with Great Britain for the purpose of procuring a modification of its provisions. James G. Blaine was his Secretary of State and James Russell Lowell was his ambassador to Great Britain. In the instructions given to Ambassador Lowell by Secretary Blaine are found these words:

> Nor does the United States seek any exclusive or narrow commercial advantage. It frankly agrees, and will by public proclamation declare at the proper time, in conjunction with the Republic on whose soil the canal may be located, that the same rights and privileges, the same tolls and obligations for the use of the canal, shall apply with absolute impartiality to the merchant marine of every nation on the globe; and equally in time of peace the harmless use of the canal shall be freely granted to the war vessels of other nations.

Secretary James G. Blaine made it entirely clear that it was the purpose of this Government to continue in force the general principle incorporated in section 8 of the Clayton-Bulwer treaty, that the same tolls for the use of the canal should "apply with absolute impartiality to the merchant marine of every nation on the globe."

President McKinley reopened negotiations with Great Britain for the modification of the Clayton-Bulwer treaty. His Secretary of State was John Hay and his ambassador to Great Britain was Joseph H. Choate. The treaty was almost completed in his lifetime, but was not signed, ratified, and proclaimed until President Roosevelt had come into the White House. Ex-Secretary of War, ex-Secretary of State, and present United States Senator ELIHU ROOT was a member of the Cabinet of both Presidents and doubtless had much to do with the preparation of our present treaty. These are the men who wrote into the Hay-Pauncefote treaty the provision requiring our Government to provide for equal tolls for the vessels of the citizens and subjects of all nations.

It is now claimed that the high officers representing the United States did not intend the language of the treaty to include vessels engaged in the coastwise trade. Happily, evidence is at hand to disprove the assertion.

On January 4, 1904, President Roosevelt sent to the Congress a special message, in which he used these words:

> Under the Hay-Pauncefote treaty it was explicitly provided that the United States should control, police, and protect the canal which was to be built, keeping it open for the vessels of all nations on equal terms. The United States thus assumes the position of guarantor of the canal and of its peaceful use by all the world.

The next day, January 5, 1904, Secretary Hay signed a note giving expression to his views. In it are these words:

> The Clayton-Bulwer treaty was conceived to form an obstacle, and the British Government therefore agreed to abrogate it, the United States only promising in return to protect the canal and keep it open on equal terms to all nations in accordance with our traditional policy.

ELIHU ROOT asserts, on his responsibility as a Senator of the United States, that all parties to the negotiations intended to make the provision for equal tolls apply to our coastwise trade. As a lawyer—and he is one of the greatest lawyers of his generation—he considers that the language of the treaty is not open to any other construction.

A few days ago Hon. PORTER J. MCCUMBER, United States Senator from North Dakota, wrote a letter to ex-Ambassador Joseph H. Choate asking certain questions in relation to the Hay-Pauncefote treaty. On March 31, 1914, Mr. Choate wrote a letter to Senator MCCUMBER in which these words occur:

> 8 EAST SIXTY-THIRD STREET, *March 31, 1914.*
>
> DEAR SENATOR MCCUMBER: I have your letter of March 25, in which you ask me to answer two questions in regard to the negotiation of the Hay-Pauncefote treaty of 1901:
>
> First. Was it understood by the State Departments of the two countries that the words "vessels of commerce and war of all nations" included our own vessels?
>
> Second. Was it understood that these words also included our own vessels engaged in the coastwise trade?
>
> I answer both of these questions most emphatically in the affirmative. The phrase quoted—vessels of commerce and war of all nations—certainly included our own vessels, and was so understood by our own State Department and by the foreign office of Great Britain. It was understood by the same parties that these words also included our own vessels engaged in the coastwise trade.

On March 31 the Republican floor leader in the House of Representatives declared in an address to the House that the proposition to establish equal tolls for the merchant vessels of all nations is a cowardly surrender of American rights in our own canal. If his statement is to be taken seriously, it imputes lack of courage and patriotism to every Republican President, Secretary of State, and ambassador to Great Britain that has ever engaged in negotiations with Great Britain in relation to the Isthmian Canal. My Republican friends, are you ready to challenge the courage and patriotism of Presidents James A. Garfield, William McKinley, and Theodore Roosevelt; of Secretaries James G. Blaine, Elihu Root, and John Hay; and of Ambassadors James Russell Lowell and Joseph H. Choate? If you are, no argument based on our treaties and the history of their negotiations would reach your case. If you are not, no argument is needed to convince you of the rightness of the present attitude of President Wilson and Secretary Bryan.

Democratic advocates of ship subsidy assert that the Baltimore platform declared for free tolls and that it should be supreme. It did, but it should not be held to be superior to our treaty obligations, solemnly entered into and proclaimed to all the world.

The free-tolls bill passed the House before the Baltimore convention. Those who opposed the provision did not suspect that any attempt was being made to commit the Democratic Party to the doctrine of ship subsidy, and did not go before the committee on resolutions. Those who favored the bill presented their case to the committee, of which Mr. Bryan was a member. The committee had not learned the history of the free-tolls amendment. They assumed that it was prepared by a Democratic committee and passed by the votes of Democrats. They felt safe to follow such a leadership. Gov. Wilson indulged the same presumptions and advocated free tolls in a public address. It appears that no one had called attention to the fact that the House committee did not prepare the provision for free tolls. It opposed the amendment vigorously, and a majority of the votes cast by Democrats were against free tolls. The provision was in no sense a Democratic policy and had no rightful place in a Democratic platform.

When Candidate Wilson and Committeeman Bryan became, respectively, President and Secretary of State, they found that the new administration had inherited from the Taft administration an international controversy with Great Britain on account of our statute which charges tolls to the merchant vessels which belong to the citizens and subjects of all other nations and exempts from the payment of tolls all vessels engaged in our coastwise trade. Great Britain was asking our Government to submit the question to arbitration. President Wilson and Secretary Bryan gave the entire subject careful investigation and consideration. They reached the conclusion that we could not safely submit to arbitration a controversy in which we had no valid arguments to submit in support of our contention. They found themselves in complete accord with all of their Republican predecessors. They were compelled to choose between the Baltimore platform and their official oaths. They chose to keep their oaths inviolate, made public acknowledgment of their own mistake, and subjected themselves to the embarrassment and criticism involved in their advocacy of the pending bill to repeal the provision for free tolls.

The Democratic floor leader also declared on the floor of the House in an address to the House that the action of President Wilson and Secretary Bryan constitute a cowardly surrender of American rights.

It takes a big man to admit his own mistakes and undertake to correct them. I do not recall in American history a finer exhibition of moral courage by public men than that which Woodrow Wilson and William J. Bryan have displayed in their action and attitude in the matter of free tolls.

My Democratic friends do you doubt the courage or patriotism of Woodrow Wilson or William Jennings Bryan?

President Wilson has not been long in public life, but he has been in long enough to win the respect, admiration, and affectionate regard of the entire country. Mr. Bryan entered public life in 1890. Since then he has made the special interests his bitter enemies. They have accused him of almost every thing else, but I have never heard that they suspected him of having a lack of courage.

Those Democrats who desire to discredit President Wilson and Mr. Bryan have sought in vain to find an adverse precedent set by a Democratic Secretary of State. A very prominent Democrat was advocating free tolls on the floor of the House. He recalled that Richard A. Olney, as Secretary of State during Mr. Cleveland's second term, became exceedingly popular on account of his vigorous and patriotic foreign policy. He decided to use Mr. Olney's popularity to discredit Mr. Bryan. He gave to Mr. Olney high and well-merited praise and tried to leave the impression that if Mr. Olney were now Secretary of State the President could not procure the support of his own highest Cabinet officer. He closed by declaring that Richard A. Olney was the greatest Secretary of State this country has had since Thomas Jefferson. Every Democrat, Republican, and Progressive who is seeking to discredit President Wilson and Secretary Bryan sprang to his feet and cheered until the Hall of the House fairly shook. Almost before the Speaker had yielded the floor the Hon. Andrew J. Peters, a Member of the House from Massachusetts, was recognized. He sent a letter to the Clerk's desk to be read. He stated that he had written a letter to his most distinguished consituent asking his advice as to the duty of a Member of Congress in relation to the bill to repeal free tolls. He desired the House to hear the letter he had received in answer to his own. The letter referred to the request of Mr. Peters. It then proceeded to give it as the opinion of the writer that it is the duty of a Member of Congress in the present instance to give to the President his cordial support and vote for the repeal of free tolls.

The fact that the letter was from some prominent man made the scene one of great interest, but it became dramatic when the Clerk had finished the body of the letter and came to the name of the writer, for it was none other than the name of Richard A. Olney, whose courage and patriotism the enemies of President Wilson and Mr. Bryan had so recently certified that the echoes of their lusty shouts had scarcely died out.

As an economic policy, my friends, the free-tolls proposition is utterly indefensible. As a proposition based on patriotism and national honor it can not live in the mind of any man a single minute after he has learned the whole truth.

In Indiana there is no politics involved in the controversy. When the bill for free tolls passed the House Hon. Edgar D. Crumpacker, a Republican, represented the tenth Indiana district. Every vote from the State, Republican and Democrat, was cast against free tolls. When the repeal bill came to a vote, on March 31, no Democrat changed his vote, and Hon. JOHN W. PETERSON, who now represents the tenth district, voted as his predecessor had done.

Regular Republicans will find it difficult to criticize the President and the Secretary of State. Six months ago there were just two Republicans in the country the nomination of either one of whom for President by the Republican Party would have aroused enthusiasm and inspired confidence. There was no other Republican whose leadership could have made the party a coherent, aggressive, and militant organization. One of these two men was ex-Secretary of War, ex-Secretary of State, and present United States Senator ELIHU ROOT. He was a member of the Cabinet which approved the Hay-Pauncefote treaty, and it is probable that he himself is its author. He led the fight in the Senate against free tolls and is now leading the fight for the repeal of the free-tolls statute. But some weeks ago he announced that his physical health was not such as to enable him to accept a nomination for the Presidency. His self-elimination left to the Republican Party but one man available for their national leadership. That one man is none other than our own ex-United States Senator and ex-Vice President Charles Warren Fairbanks.

On the evening of May 1, 1913, at St. Louis, he delivered an address before the American Peace Congress. His address was published in the Indianapolis News of May 2, 1913. In his address he gave a summary of our prior and existing treaties with Great Britain in relation to the Panama Canal, together with a history of our negotiations in relation to the treaties. He referred to the statute exempting vessels engaged in our coastwise trade from the payment of tolls, and demonstrated from the provisions of the treaty and the negotiations which resulted in its adoption and ratification that "free tolls" are a violation of the letter and spirit of our solemn international agreement with Great Britain for the use and benefit of all the nations of the world. Great Britain had suggested that the matter in dispute be referred to arbitration. Mr. Fairbanks urged that we eliminate the question by our own action, which can be done only by the repeal of the statute providing for free tolls. He favored arbitration for all real disputes between nations, but he was not willing to put another nation "to the trouble of resorting to an arbitral tribunal to determine a question which has no basis either in fact or in good conscience." If the men now in control of the Republican Party shall seek to gain a partisan advantage by attacking the present attitude of President Wilson and Secretary Bryan, and if they shall ever again face the responsibility of a party in power, they will themselves face the embarrassment incident to the choice of their official oaths as against their ill-advised and unpatriotic platform declarations.

The name of Col. George W. Goethals, the maker of the Panama Canal, has been mentioned in connection with the Republican nomination for President. I personally do not expect him ever to become a candidate for public office, but many Republicans have hoped to find in him a nominee for President that would bring back into the party organization those who have gone into other parties.

He knows more about the canal than any other living man. He made it. He has studied every question in any way related to it. The Senate committee in charge of the pending repeal bill asked him to give the committee the benefit of his knowledge and judgment. His personal presence was required on the Canal Zone to hasten the work necessary to be done to prepare for passing our vessels of war through the canal. He therefore sent to the committee a written statement of his views. Senator SIMMONS read his statement to the committee. He discussed the several matters involved and closed his statement with the following paragraph:

You will observe that the man who is to be charged with the defense, maintenance, and operation of the canal did not so much as refer to the arrant nonsense indulged in by those gentlemen who assert that Great Britain is seeking to interfere with our management and control of the canal. He knew that such talk is intended purely for partisan purposes and does not deserve to be mentioned in a serious discussion of the pending bill.

After discussing the cost of the canal and its annual maintenance, he said:

To secure this amount through tolls it will be necessary to charge all shipping as indicated in report quoted. Established steamship companies fix rates after conference, and as they are in the business for profit, will demand the highest rates the traffic will bear. These rates will be independent of tolls. It follows that exemption from tolls will not give cheaper rates from coast to coast to either shipper or receiver, but will increase profits to shipping companies. The same is applicable to rates from interior points to either coast. Agreements will be made between railroads and ships for through rail and water rates, same as at present, and rates divided between two interests as per agreement. Again, exempted tolls will not give lower rates to shipper or receiver. Therefore free tolls to vessels engaged in coastwise trade result in a subsidy to a class of shipping already fully protected and not in need of subsidy. I do not believe in exemption of tolls for coastwise trade, first, because this amounts to a subsidy to a class of shipping and will benefit stockholders and not shippers; second, because this canal will need all revenue it can get to pay its current expenses and indebtedness.

The most acute situation which the administration faces just now is that relating to our unhappy neighbor, the Republic of Mexico. Gen. Huerta holds the southern portion of Mexico largely within his power. Other soldiers have more or less control over the portion to the north. It seems probable that none of them are prompted by a higher motive than that of personal aggrandizement, and that every one of them will seek to compel intervention by the United States in preference to the success of his rivals.

The President does not desire to use armed forces in dealing with this situation, nor does any thoughtful and patriotic American citizen. He is exercising almost infinite patience with the insolence and recklessness of the usurpers, pretenders, and bandits who are oppressing and plundering a helpless people. Many men have criticized his delay and inaction; others criticize his final request for a resolution justifying the use of our Army and Navy to compel a wholesome and proper respect for our flag, our national sovereignty, our Army and Navy, and the rights of our citizens. As to what the future has in store, I express no opinion. This I know, that the President will remember that we are a powerful nation dealing with a weak and prostrate neighbor; that he will act without malice and only after due deliberation; that he will withhold nothing from the Congress and the country; and that his supreme purpose shall be for Mexico the earliest possible restoration of law and order and for us the earliest possible restoration of friendly relations with our neighboring Republic on the basis of mutual respect and confidence. In the meantime our Government must meet the responsibilities that rest upon it and maintain peace with honor, if that be possible. If that be impossible, it will be compelled to resort to force in order to lay the foundation for permanent peace for Mexico, for the United States, and for the Western Hemisphere. I trust that those of us who are radical will exercise self-control; that those of us who are ultraconservative will be reconciled to the demands of existing conditions; and that we shall all stand as one man for a national

policy that will demonstrate to the world that in our dealings with a weak and prostrate people this great Republic has the strength of a giant, the courage of a crusader, the sensitive conscience of a Christian gentleman, and the tender heart of a woman. In no other way can we so truly obey the Pauline injunction, given to the Christians who resided in the capital city of the Roman Empire, but equally applicable to all men and all nations:

If it be possible, as much as lieth in you, live peaceably with all men.

To each convention that has nominated me I have given a pledge in substantially the same words. I hold a commission to represent this district until March 4, 1915. If I shall be elected in November, the period of my public service will be extended until March 4, 1917. In any event, my duty to the district will remain the same until the end.

Democrats, Republicans, and Progressives have said to me that they only ask one promise, that I will continue to support the policies of President Wilson and Secretary Bryan. Of course I have done that, and of course I shall continue to do so. Indeed, I have found that the best way to keep my convention pledge has been to support the President and his administration. I have also found that the best way to support President Wilson and Secretary Bryan has been to keep my convention pledge.

It is in the light of that fact that I feel free to renew the pledge I have three times given to the conventions that have nominated me and to the people of the district.

This, then, is my supreme pledge:

I will give my time, thought, and energy whole-heartedly to the study and performance of my official duties; I will seek to know and protect your rights; I will endeavor to learn and execute your will and to cast a series of votes that will fairly represent the judgment and conscience of the people of the ninth district of Indiana.

The Cotton Situation.

EXTENSION OF REMARKS

OF

HON. J. B. THOMPSON,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914.

Mr. THOMPSON of Oklahoma. Mr. Speaker, I wish to call the attention of the House and the high officials of the Nation to a condition confronting the cotton growers of the country which, if not remedied, and that speedily, will result in financial disaster and bankruptcy not alone to the farmers but, as well, to those of our fellow citizens engaged in all other kinds of business. The cotton farmers of my district and the entire cotton-growing section suddenly and without warning are brought face to face with a condition for which they are in no sense responsible. A war involving the nations of Europe, which have heretofore used 58 per cent of our cotton crop, has resulted in a stagnation of business and paralysis of market that threatens the prosperity and happiness not alone of the 30,000,000 people who reside in the cotton-growing section but, as well, the entire citizenship of our country. This situation, however, is but temporary and will last only while the war is in progress. As soon as peace is declared and business abroad resumes its normal course, the demand for cotton and the prices obtainable will inevitably exceed those prevailing in normal years.

Were there adequate means for the storage of the crop, and were cotton planting established on a firmer financial basis, the crisis would not be so acute. Moreover, the situation is further complicated by the inadequate methods of financing the crop during the growing period. In the past the bankers in the North have not taken a great interest in this matter. They have rather left it to the cotton-growing section, where money is scarce and high rates of interest prevail. It has been customary for the country merchant or banker to furnish the requisite supplies and money attendant upon the production of a crop until its harvesting, and for the planter to rely upon the quick sale of his cotton to meet his obligations, reimbursing his banker or merchant as he sells his crop, the security for such loans not being such as would be discounted by the Federal reserve banks.

The condition then confronting the cotton planter at the present time is such that if upon the harvesting of his crop he is required to meet his pressing obligations, he will be forced to sell his cotton at a price in many instances less than it cost him to produce it. The result of this will be that the cotton-growing section, which has been making such rapid strides in economic development in recent years, will suffer an irreparable setback, and the cotton-growing industry will dwindle to such amounts as will be insufficient to meet our home demands. The situation then is most serious. Its gravity can not be overestimated. Bearing in mind that the loss of the European market is but temporary, it is readily seen that what is needed is the devising of some means whereby the cotton planters may secure relief from their creditors and may be enabled to store their crop and reap the benefit of the increased market that the close of the war will bring. Private efforts have proven unavailing for the proper financing of the crop. It is then imperative that the Federal Government extend aid to the cotton growers at this time.

This calamity broke upon our people without warning, and just as they began to gather their cotton. Had it come six months earlier or postponed its arrival six months later the cotton producers could have taken care of the situation themselves. If a foreign foe had landed on our Gulf coast and wrought ruin and devastation in our cotton fields, such as our people are experiencing because they happen to occupy the position of innocent bystanders while the war in Europe goes on, every dollar of our resources and the lives of every one of our citizens would be forthcoming to stay the ruthless tramp of the invader and protect the property of our citizens. The destruction being wrought by this foreign war is no less harmful to our people because the scene of hostilities is oversea. The need for national aid and defense is no less real because the war is confined to foreign soil.

It is well that we pause and inquire the cause of the frightful condition into which our people will soon be plunged if a remedy is not forthcoming. It is very simple and plain to anyone who will take the trouble to go over the banking and currency legislation enacted by the Congress since the establishment of the Government. The Congress has never seen fit to recognize the scientific and fundamental difference between a system of banking and currency adapted to the users of commercial business and a system adapted to the needs of agriculture. During the consideration of the Owen-Glass bill, which will soon be put in operation, and on September 16, 1913, I pointed out that the bill failed to care for those of our people engaged in agriculture. I then said:

> The enormous excess rate of interest paid by the farmers and producers of the country for the use of money is not because the class of security offered by any other industry of our country is safer than the security which they offer, but it is because under our banking and currency laws the class of security which they can offer for a loan is not recognized as a liquid asset. In other words, their business and their occupation would not permit them to borrow money for short time or on call.
>
> The banking and currency bill which we are now considering is not a banking and currency act for the great producing masses of this country. It is a banking and currency act for those classes of our citizenship engaged in commercial occupations. I believe, as declared in the Democratic platform, that the banking and currency act should take care of the interests of every class of our citizenship—those engaged in the farming industry as well as in commercial and other industrial occupations.

Those who are responsible for eliminating from that bill a rural-credit system which many of us desired should be written into it ought to consider the matter of granting temporary and emergency relief to the farmers seriously in the light of the failure of the Federal reserve act to respond to the demands created by the present emergency. The requirements of a system of banking and currency which will provide for the necessities of commercial banking are entirely distinct from those which will prove adequate for the needs of agricultural credit. The commercial bank does business on the funds of its depositors; its obligations are in great part demand obligations, and from the very necessity its assets must be liquid assets—short-time loans, easily convertible into cash, that the bank may be able to pay its depositors at any time demand is made. These conditions restrict the commercial bank to short-time personal or chattel loans—loans that can be readily and quickly converted into cash in time of stress. Another fact must not be lost sight of in this connection, a fact that all know exists. During times of financial stress and panics people with money horde instead of depositing, and many who have funds on deposit become frightened and withdraw them from the bank. I have made these observations that we might understand that the people are not going to be deceived by a wholesale denunciation of the banks of the country. That man little understands the intelligence of the American people if he believes they do not know at whose door to lay the blame for the present paralyzed condition of the cotton market.

They know that Congress is the only body in this country that possesses power to coin money and fix the value thereof. They know that Congress, by levying a tax of 10 per cent on the circulation of State banks, has rendered the States powerless to provide relief for their citizens in a crisis such as they are now experiencing. They know that the National and State banks under existing law are unable to furnish them with relief without Federal aid. They know that during all the years of our national life, extending over a period of more than a century and a quarter, that Congress has failed to enact a system of currency and credits adapted to agricultural needs. They know that while those engaged in other lines of business have been able to secure money at from 4 to 6 per cent for such time as they desired, that the farmer has been forced to pay from 12 to 36 per cent on such short time as inevitably meant the sacrifice of his property. They know that the destruction of half the value of the products of their toil would not now be threatened had this Congress forced the Banking and Currency Committee to report a bill establishing a system of rural credits, as I insisted last June it should do. Inasmuch, however, as there is no permanent system which will care for the present emergency, it is the duty of this Congress to provide temporary relief for cotton farmers in this hour of their distress. The responsibility for the present paralyzed condition of the cotton market rests on the Congress by reason of its failure to provide against such an emergency, and it is the solemn duty of Congress to see that loss is not sustained by those who are the innocent victims of its negligence.

The plan proposed by the representatives of the farmers who have come here to ask relief from Congress is contained in the bill prepared at a conference of those representatives and Members of Congress representing cotton-growing sections, and the bill reads as follows:

Be it enacted, etc., That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in States producing cotton or tobacco, or both, $250,000,000, or so much thereof as may be necessary to carry out the purposes and under the terms and conditions of this act, to be advanced to the producers of cotton or tobacco or owners of lands upon which the same was produced, upon cotton or tobacco produced during 1914, at a rate of interest not exceeding 4 per cent per annum. The deposits herein authorized shall be advanced upon the terms prescribed in this act and under rules to be prescribed by the Secretary of the Treasury. The deposits herein directed to be made shall be apportioned among the several States in accordance with the number of bales of cotton and pounds of tobacco produced therein during the year 1913, as ascertained by the Department of Agriculture.

SEC. 2. That the Secretary of the Treasury shall make and enforce rules and regulations not inconsistent herewith for carrying out the purposes of this act. Said Secretary of the Treasury may fix the compensation for the banks for their services in lending said sums of money.

SEC. 3. That the Secretary of the Treasury shall, in his discretion, either immediately cause to be prepared United States notes to the extent of $250,000,000 to be used for the purpose of making the deposits in compliance with this act, which said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe; or he may sell not exceeding $240,000,000 of Panama Canal bonds, heretofore authorized by law, at a rate of interest not exceeding 3½ per cent per annum, and the act or acts heretofore passed authorizing the disposition of said bonds are hereby amended so as fully to authorize the disposition and use of such bonds as is herein prescribed; or, in his discretion, the Secretary of the Treasury may use both the proceeds of the bonds and the notes in order to carry out the purposes of this act, not to exceed in the aggregate $250,000,000: *Provided*, That such United States notes, should the Secretary of the Treasury conclude to issue them, deposited under this act and not used as prescribed herein, shall be returned to the Secretary of the Treasury and shall be destroyed.

SEC. 4. That this act shall take effect and be in force upon its passage.

SEC. 5. That this act shall expire by limitation on the 31st day of December, 1915.

Mr. Speaker, this is not a visionary scheme. It presents no unusual request. The farmers ask the Government to take no chance. In the Federal reserve act Congress provided for the issuance of currency to be advanced to the banks through the agency of the regional reserve banks on their assets—commercial paper—at 2 per cent. Cotton is safer security than commercial paper. It is not a sectional crop nor a national crop. It is a great international crop—a world-wide necessity. The 11 cotton producing States by its production add annually more than a thousand million dollars to our national wealth. Its exportation abroad brings to our shores more than $600,000,000 in gold annually, and establishes the balance of trade in our favor. If it were not for this great product the balance of trade would be against us, and instead of being a creditor we would become a debtor nation.

It is indestructible except by fire, and if properly warehoused will be as valuable a century hence as the day on which it is baled. The average value of middling cotton during the last 5 years has been in excess of 12 cents per pound or $60 per bale; for the 9 years preceding its average price was more than 9½ cents per pound or $47.50 per bale; and during the past 14 years its average price has been 11⅛ cents per pound or $56 per bale. The farmers are asking an advance of only two-thirds of the value of their product. We all know that the world must be clothed regardless of the duration of the European war. If that conflict continues the cotton must be manufactured here and shipped abroad as a manufactured article instead of raw material. A great war emergency exists. The relief sought is but temporary; the security is ample; what will Congress do? Will it respond to the distress signal and extend relief to our farmers or will it give no heed to their petitions and permit five hundred millions in value to be taken from the pockets of those who produce this great world-wide necessity? If there were any other method by which this loss could be averted I am sure every friend of the farmer would be glad to consider it, but we had as well face the fact, for fact it is, that there is but one organization with back strong enough to carry the load, and that is the United States Government itself. If five hundred millions in value of the property of any other class of our citizens were threatened with destruction the country would witness the enactment of a statute by the Congress with marvelous speed to avoid that loss.

Mr. Speaker, it is not amiss to call the attention of the House and the country to a few of the performances of this and previous Congresses where vast sums have been appropriated where the urgency and necessity were not half so pressing and justifiable as now. The railroads have lately appealed to the Interstate Commerce Commission for permission to increase their rates because of the decrease in business caused by the war. Their business being of a public nature they can legislate for themselves by increasing their freight and passenger rates, and thereby collect from the people sufficient funds to insure a profit on their investments. Not so with the farmer. There is no way whereby he can tax others to insure a reasonable return on his investment and his toil. We see a few thousand rich tourists spending a holiday in Europe when the war broke upon them. This Congress with blinding rapidity, on the 5th day of August, introduced, reported from the committee, and passed through both Houses a bill appropriating two and one-half million dollars for their relief, and two warships bearing a high official of the Government, the Assistant Secretary of War, and a corps of clerks were dispatched posthaste, supplied with gold, to hunt out and bring them in safety to our shores. A bill creating a Bureau of Insurance in the Treasury Department and appropriating $5,100,000 was rushed through this Congress at top speed when war was declared to care for the risks of those engaged in ocean commerce. In 1907, when a panic broke on the stock market in New York in the midst of our gathering season, when crops were abundant and yielding a good return, and when the country banks were bulging with deposits, the Secretary of the Treasury rushed $40,000,000 of Government funds to J. P. Morgan to distribute among the financial institutions on Wall Street to save them from bankruptcy. A bill has just been rushed through this Congress under whip and spur raising an additional revenue of $105,000,000, and what for? Not because the Government needs the money, for there is nearly $130,000,000 in the Treasury now, but that the $75,000,000 now deposited in banks may not be withdrawn and the financial safety of those institutions imperiled.

Last year when the great flood swept through the streets of Dayton, Ohio, carrying wreck and ruin in its path, leaving business prostrate in its wake, and the ruin of the national banks of that city were threatened, the Secretary of the Treasury sent a representative and authorized the designation of every national bank as a fiscal agent of the Government and signified his intention to deposit $2,000,000 of public funds in those banks to provide against financial ruin. The mere announcement restored confidence, and it never became necessary to deposit the $2,000,000. So in this emergency, when it becomes known that there will be sufficient money to handle the farmers' cotton and maintain a price of 10 cents per pound, the consumers will take the product at that price. A few years ago Congress passed what was known as the irrigation act, and in order to protect the people of the 15 Western States it was provided that the funds obtained from the proceeds of the sale of public land should be used in constructing great irrigation plants there for the benefit of the people of those States, and the people were allowed to execute notes for this money and to use the water impounded in those irrigation plants in order that they might develop their farms, and nearly $80,000,000 of the funds belonging to the public—the proceeds of the sale of this public land—was thus invested.

Only a few days ago we passed a bill extending and practically remitting all interest on this vast sum because these people were distressed and could not pay, and I doubt if the time ever comes when that money, principal and interest, will be refunded to the people and returned to the Treasury of the

United States. Indeed, Mr. Speaker, I do not think that money could have been better spent than in the way it was applied in developing homes for our people. On August 13 of this year, less than 15 days after war was declared, a resolution was introduced in the United States Senate providing for the purchase of 25,000,000 ounces of silver bullion at 58 cents an ounce; and for what purpose? Senator SMOOT in submitting the resolution said:

I wish to say that at this time, on account of conditions existing in the financial world, brought about by the war in Europe, the immediate demand for silver has ceased. There is no question that in a month or two there will not only be the usual demand for silver by the countries of Europe, but I anticipate a larger demand for it than we have ever had. History has shown that during and following the conclusion of a great war the demand for silver has always increased. Under such conditions people prefer metallic to paper money.

Mr. President, many of our mines in the West are in such shape that they can not suspend operations without a great loss to the mining companies. In some of the mines we have to contend with water, and unless the mines are in operation all the time they become flooded and the machinery badly damaged.

And further on the Senator said:

Mr. President, if conditions were normal, if we had the transportation facilities at hand and the financial situation in the world were such that business and trade could be conducted in regular order, we would not be asking for the Government to anticipate the purchase of a single ounce of silver. * * * We can get along if we can only provide work for the men in our mines, for mining is one of the greatest, if not the greatest, industry in the intermountain country. In view of the fact that the Senate yesterday voted an appropriation of several million dollars to provide war-risk insurance, and it is expected to vote measures involving many millions more to enable the Government of the United States to enter the transportation business and assist other industries of the country, the request for the advancement of three or four million dollars, as provided in the pending bill, is a mere bagatelle.

Senator PITTMAN, of Nevada, in supporting the resolution, said:

About two weeks ago the Treasury Department purchased 1,300,000 ounces of silver, and announced that the Treasury Department intended to protect silver at 52 cents. What was the result? The day that announcement was made silver was down to 50 cents; the minute the Government made that announcement silver went up to 56 cents. Why was that? It was not on account of the purchase of 1,300,000 ounces of silver; that was infinitesimal; it was because the buyers of bullion in this country knew that they would not be able to go to the little mill man and to the little smelter man and offer them any price they wanted to offer for their bullion. They knew that they had the Government of the United States standing between them and their victim, and saying, "You will have to pay at least 52 cents an ounce for that bullion or you can not have it," and therefore they were compelled to cease their bear tactics. Does it not look like that? Does this Government mind authorizing the Secretary of the Treasury to make an advance purchase of bullion if it will protect against such a trust as that?

Mr. Speaker, this resolution for the purchase of silver was proposed on the 13th day of August, referred to a committee, reported back to and passed by the Senate on the 22d day of August, on a vote of 39 yeas to 11 nays, with an amendment reducing the amount of the purchase from 25,000,000 to 15,000,000 ounces, and the sum of $8,700,000 was thereby appropriated for the purchase, in order to relieve the distressed condition of the mine owners of the West. We heard no denunciation of the Senate as wild paternalists when that resolution was passed.

But when an effort is made to extend aid to the thousands of weary and toil-worn men, women, and children who have labored to produce a product to supply a world demand, those who favor such a measure are denounced as populists, socialists, paternalists, and anarchists, and the farmers are told that their request is visionary and beyond the power of the Government.

Mr. Speaker, government, according to my conception, is an association of people organized and acting together for mutual benefit and protection. When one class is threatened with financial or physical destruction it is the highest duty of organized society to protect that class from injury. If this is not true, of what benefit is government?

Mr. Speaker, the Democratic Party in Oklahoma favors direct governmental aid to our farmers. I am just in receipt of a letter from the Hon. R. L. Williams, the Democratic nominee for governor of our State, favoring this relief. Judge Williams, under date of September 21, wrote me as follows:

OKLAHOMA CITY, OKLA., *September 21, 1914.*

Hon. JOSEPH B. THOMPSON, M. C.,
Washington, D. C.

DEAR JOE: I notice that you are one of the 21 members of Congressman HENRY'S committee to devise ways and plans for the Federal Government to aid the farmers in holding their cotton for a reasonable market price on account of the depression in price through the war in Europe.

Every agency should be utilized possible to aid and facilitate not only the holding of the present crop, but also to reduce the acreage of next year's crop. This can best be brought about (1) by governmental aid and governmental influence; (2) by the action of the farmer; (3) by the assistance and aid of the banker, or the private individual that aids in the holding of the cotton and the financing of such crops.

During the past few months I have looked on with pleasure at the purpose and effective action shown by the present administration toward reconstructing the currency system, and also toward establishing a rural-credit system for the farming population. At the same time I have been pleased at the action of Congress in extending the Federal Agricultural Department with a view of developing efficiency in farming, but now this acute emergency has arisen, which was brought about by this foreign war and which could not be reasonably anticipated. The banker who has the advantage of the emergency currency through the agency of the Federal Treasury Department must loan this money at a very low rate of interest in order for this cotton to be held to the advantage of the farmer. Every limitation that the law permits must be imposed by the Treasury Department on the banks, so as to insure its being loaned at a low rate, and every patriotic impulse certainly appeals to the banker not to try to make any appreciable profit out of this great and unfortunate world-wide calamity. I am engaged in farming to some extent, and absolutely my cotton crop during the next season will be cut down half.

I was in a bank last Saturday, and the managing officer of the bank told me that he was going to furnish the money to pick the crop of his customers without any interest and extend all of their indebtedness for 30 days without any interest, and that then it was his purpose to make reextensions until the close of the next year on a reasonable basis. I do hope that the bankers of the country will realize that now is the time to perform a real public service by not attempting to make any profit out of the holding of the cotton, but merely act reasonable so as to protect themselves whilst they are aiding in holding the present crop.

But so much for this. What I started to write you about is that I hope that a bill will be passed along the Henry plan—that is, for the Federal Government to provide ways for extending relief to the farmer direct—say, for the farmers to organize themselves into cotton-holding associations and store their cotton in warehouses and the Federal Government to advance so much money upon so many bales of cotton, say, on every 100, and advance this money at 3 per cent to the farmer direct, plus the expense in handling the matter under safe rules and regulations. This cotton situation amounts to a public calamity, and the Government, as a rule, comes to the relief of the country in times of great calamity.

On account of our association in the past and also on account of the fact that you are a member of this Henry committee, I address this letter to you, and urge that Congress take some speedy action and that it make an appropriation of a sufficient amount of money, up into the millions, so as to insure the holding of this cotton crop under such rules and regulations as will bring a reasonable price.

Very sincerely, yours.

R. L. WILLIAMS.

In conclusion, Mr. Speaker, I am glad to say that powerful forces are coming to realize the enormous losses that will be sustained, not alone by the people who produce the cotton, but by every line of industry and business in our country, if the Government does not come to the aid of the cotton growers in this crisis. The Washington Post, a great daily paper of this city, has for the past 10 days carried on a warfare in behalf of the producers in its editorial columns, and from some of these I desire to quote. Likewise the New York American, the Boston American, Cincinnati Inquirer, Chicago Journal, San Francisco Examiner, and practically the united press throughout the cotton-growing section, circulating in many million homes throughout this country, are lending their powerful aid in bringing mighty pressure to bear in behalf of the immediate enactment of this legislation.

Under date of October 6 the Washington Post editorially said:

The only dark spot on the business horizon of the United States is the cloud to be found upon the cotton-producing States, through the failure of foreign demand for that agricultural product.

The conditions existing in those States threaten disaster to all business in their territory, and if permitted to continue will not fail to affect adversely the many industries of the North and East, which are dependent largely upon the buying power of the people of the South.

Business in the South can not suffer paralysis without deranging financial, commercial, and industrial conditions in all the other section of the Union.

This impending calamity in the South is therefore one that endangers national prosperity, and calls for and justifies national action to prevent it.

Not a nation on earth but would act promptly in any case of this kind to protect the interests of its people, and the administration and the Congress should cooperate in the fullest and the most cordial manner in the relief measures necessary to prevent the bankruptcy of the cotton planters and the resultant demoralization and ruin to the majority of the commercial and industrial interests of that section of our country.

* * * * * * *

If our financial institutions are unwilling or unable to save the cotton planters of the South in this crisis, the Government should do it, and $200,000,000 or $400,000,000 of United States notes issued to save the South from ruin and the Nation from danger can be carried soundly, safely, and securely by the Treasury reserves of gold.

For the Congress to adjourn in the face of this financial danger to the people of the cotton States would be heartless, unwise, unpatriotic.

For the administration and the southern Members of the Senate and the House to sanction adjournment under existing conditions in the cotton States can not be deemed possible for a moment.

It is a national duty to relieve the cotton planters of the South in this crisis thrown upon them by the European war to help them at once, to act speedily, and provide aid in the most ample way.

And again, under date of October 8, it said:

Exports of cotton this season to date amount to 181,721 bales. Last year in the same period 1,323,854 bales were exported.

This is the story of cotton in a nutshell. It shows the terrible danger that confronts the South. If this danger be not averted, it will bring about a collapse that will affect every person in the United States.

The South can not suffer without the East, North, and West suffering also. The country is one body, with four members. Just as the body suffers when an arm is cut off, so the Union suffers if the South is injured, or the West ruined, or the North devastated.

As it is the duty of the whole man to protect his members, so it is the duty of the Nation to protect all its parts. It can not thrive in one part while another part is stricken.

The United States is rich enough to protect itself against the threatened ruin of the South. It has the vitality with which to meet and withstand this economic shock.

On October 9 it again commented editorially, as follows:

The mails from every cotton State are bringing the country to a closer realization of the widespread and serious disaster which the sudden failure of demand for cotton is bringing upon the people of the South.

True, though it is, that within a few weeks, or, at most, months, there will be demand for the fiber, probably large and pressing demand, the fact remains that at this time neither the people of the South nor the financial institutions of the South are in position to ward off wreck and ruin to the commercial and agricultural interests of the South without the aid of the administration and the Congress of the United States.

As well raise an umbrella or don a raincoat to escape the deluge of the falls of Niagara as for the people of the South, with their present financial resources, to attempt to save themselves through their local monetary supplies or local credits. These will aid, but they are not at all sufficient for the task, which is of national magnitude and demands national assistance, and every business man of the South realizes this, and every business man of the Union will be convinced of it if he studies conditions.

From August 1, 1913, to October 5, 1913, exports of cotton from our ports were 1,307,000 bales, of an approximate value of $85,000,000.

From August 1, 1914, until October 5, 1914, there were exported but 152,000 bales of cotton, of an estimated value of $6,000,000.

Can any member of the administration or any Senator or Representative in Congress fail to perceive and to sense what that means to the cotton planters, to the merchants, to the transportation companies, to the people of the South?

And, again, on October 12 it said:

The agriculturists of one of our most important sections are facing bankruptcy and ruin by reason of an unexpected cessation of the demand for cotton.

Their crop of cotton is made, is valuable, is needed by the world; but the banking institutions of their section have not the funds to properly care for the planters' interests for the future months, and the financial institutions of the other sections of the country are not in position to extend the aid which the South needs, should have, and must have to preserve it from a great disaster and the North and East from being compelled to share in the national depression which is sure to follow.

The South can only be saved through favorable action by the administration; only can the entire business structure of the South be preserved by immediate relief of the cotton planters by those in control of national power.

The Senators and Representatives of the South should not be compelled to go home to face their constituents amid poverty, woe, and distress, and tell them that a Federal Reserve Board could approve of shipping $100,000,000 of gold out of the country to cover maturing obligations of bankers and corporations; could authorize a syndicate, a pool, to be formed for that purpose, a pool which is already counting its profits upon the transaction; but that the Federal administration could not approve of an issue of currency by the Government to alleviate their financial distress.

That is a situation for the Senators and Representatives of the South that must not be created.

* * * * * * *

The Federal Government should aid the South, for aid to the South now is safety and security to all sections of the Union.

The New York American, under date of October 8, 1914, in an editorial, said:

Not within the present decade—probably not within the quarter century—has the Government at Washington fronted a more serious financial crisis and responsibility than that presented by the conditions of the cotton crop in the South.

The President, the Secretary of the Treasury, and the Congress share alike in the tremendous responsibility of meeting it.

A great staple crop worth every year more than a thousand millions of dollars, which affects the vital prosperity of more than 30,000,000 people and touches deeply the financial life of the entire Republic, is for the moment unsalable. This situation certainly transcends in interest every other matter now before the Government.

* * * * * * *

It is better far that the Congress should indefinitely postpone its adjournment, and that the President and Secretary McAdoo should have no holiday than that this vast and pressing business should be left as it is.

* * * * * * *

The representatives of the whole farming interests of the South are in Washington fighting to get a favorable report to-day or to-morrow. The southern delegation in Congress will support the life-and-death measure to a man. The President has so far committed himself to this statement: "I am in sympathy with Government aid for farmers so far as it is consistent with the welfare of the whole country."

But this vast and vital emergency calls for something more definite from the President.

The administration and the Treasury went promptly and properly with the Treasury millions to the relief of Dayton, Ohio, when the flood swept that city with destruction.

And surely in this far greater emergency—where the loss is quadruple, the numbers a hundredfold, and the suffering prolonged and extended—the same Government can safely reach out its helping hand to avert the ruin threatened among the millions of the South.

Mr. Speaker, I have received letters and petitions from more than 2,000 citizens of my district, setting forth the terrible suffering that is sure to follow if some relief is not given. These petitions are too numerous and would consume too much space to insert here, and without printing I call them to the attention of the House to illustrate the widespread and well nigh universal demand for governmental assistance. The dismay which present conditions have created in the minds of the men and women of my section of the country can be very easily imagined, and they feel and feel very keenly that they are justified as American citizens in calling upon the Government of the United States at this crisis to do something to relieve the tensity of the situation.

Mr. Speaker, much pressure is being brought to bear for an early adjournment of this Congress, but I can never consent to it unless some relief is extended to our stricken cotton growers. It would be better that we remain here and by proper legislation give this relief and all go down to defeat, than that we go home and be reelected amid the suffering and distress which are sure to follow if we fail to do our plain duty and pass this bill.

Mr. Speaker, I maintain that this Government was set up by the fathers for the benefit and protection of the people, and no matter to me what others may say, how others may think or vote, or with what denunciation I may be met, I am convinced in a crisis like this the very highest impulse of patriotism and administrative public policy dictate such action on the part of the Government as will preserve the prosperity and happiness of the men, women, and children of my section.

Mr. Speaker, if my support for this bill condemns me, I am ready for the sentence.

Speech of Speaker Clark Delivered at the Opening of State Campaign at Atlantic City, N. J., Saturday, October 10, 1914.

EXTENSION OF REMARKS

OF

HON. THOMAS L. RUBEY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 15, 1914.

Mr. RUBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, granted me to-day, I desire to present a speech made by my distinguished colleague, Speaker CLARK, delivered at the opening of the State campaign at Atlantic City, N. J., Saturday, October 10, 1914.

The speech is as follows:

CHAMP CLARK'S SPEECH, DELIVERED AT ATLANTIC CITY, N. J., SATURDAY, OCTOBER 10, 1914.

We have fought a good fight; we have kept the faith. (St. Paul.)
Peace hath her victories no less renowned than war. (John Milton.)

The result of the congressional elections this year will be a prophecy of the result of the presidential and congressional elections in 1916.

In my judgment a majority of the American people indorse the achievements of the Democratic administration and of the Democratic Congress. If the voters go to the polls, their indorsement will elect a Democratic House on the first Tuesday after the first Monday in November—a consummation devoutly to be wished.

The only hope our opponents have as to the approaching congressional elections is that Democrats are so certain of winning, because they deserve to win, that enough of them will stay at home on election day to permit Republicans to slip in. To use an expression more illuminating than elegant, they hope to throw a monkey wrench into the Democratic machinery, thereby preventing the enactment into law of the outstanding promises of the Baltimore platform.

Overconfidence has lost more battles of every sort than any other cause since the world began. Our Republican brethren are depending for success on Democratic overconfidence. Let us hope that Democratic voters will dash Republican hopes to the ground by every mother's son of them going to the polls and voting for the Democratic candidates.

Most assuredly, New Jersey Democrats should need no persuasion to vote this year.

The Democratic national convention at Baltimore paid New Jersey the high compliment of nominating her governor for the greatest office ever devised by the wit of man, and in November, 1912, the American people indorsed and magnified that compliment by electing him—the first New Jersey President.

No district in America has a more faithful, industrious, patriotic Representative than this one has in the person of Hon. J. THOMPSON BAKER. He is courteous, patient, indefatigable, and absolutely loyal to the great principles of Democracy.

He is my personal friend, and I want to see him reelected to represent the district in which my father was born, and I believe that the people of this magnificent district will show their appreciation of his services by giving him another term.

He is not only my personal friend, but he is a close friend to the President and a stanch upholder of the President's policies. The longer he remains in Congress the more valuable will his services be.

In this contest we stand confidently on our record. It is an old saying: "Judge a tree by its fruit." That rule was established by highest authority. It is a wholesome rule grounded in justice. We are willing to be judged by it. In our great achievement President Wilson did his part; the Democratic House did its part; and the Democratic Senate did its part. As Admiral Schley said, touching the famous naval victory off Santiago: "There is glory enough for all."

This Congress has been in session more days, barring the approaching short session, than any that ever met. Through summer's heat and winter's cold we have worked industriously to give the people better government by redeeming Democratic promises. It was the habit for years to sneer at Democrats as merely a party of negation, as a party utterly destitute of the wisdom or power for constructive legislation. By our splendid performance we have completely answered that idiotic sneer, for we have put upon the statute books in one session of Congress more constructive legislation than was ever passed by any other Congress in the entire history of the Republic, except the First Congress.

For years our opponents said that we could do nothing. Now they vociferously assert that we are doing too much. Certainly they are hard to please. Wherefore?

I do not love thee, Doctor Fell,
The reason why I can not tell;
But this alone I know full well,
I do not love thee, Doctor Fell.

The change of Republican opinion from their old claim that we could do nothing to the assertion that we are doing too much reminds me of a tale that Hon. Charles B. Landis used to tell. He said that when a new railroad was built into western Pennsylvania an old backwoodsman and his wife, neither of whom had ever seen a locomotive engine, went to the terminal station to take a peep at the railroad and rolling stock. After the old man had looked the engine over, he said to his wife, "Sarah, they'll never start her." When the train went whizzing down the track at a gait of 40 miles an hour, the old man said to his wife, "Sarah, they'll never stop her." Evidently our Republican critics have taken a leaf out of that old man's book.

But we are pleasing the vast majority of the American people, which is a great and abiding consolation. "None are so blind as those who will not see," an adage which applies with peculiar fitness to those who are carping at the Democratic administration and the Democratic Congress.

It is a remarkable fact while Republican newspapers are busy criticizing what we have done, nearly every great measure which we have placed upon the statute books received a handsome percentage of Republican and Progressive votes in both House and Senate. For instance, they could muster only 54 votes out of their 145 Members against the conference report on the antitrust bill. Yes; we are not only willing that the Democratic tree be judged by its fruit, for they are good to the taste and wholesome in result, but we are proud of our record; upon it we gladly submit our claims to the grand inquest of the Nation, serenely confident of the plaudit, "Well done, good and faithful servants."

For 18 years Republican legislation formed the bone of contention in campaigns and in politics. They held every post of vantage—White House, Senate, and House of Representatives. During all those years we could not place upon the statute books any law whatsoever, for no man is possessed of ingenuity enough to devise a scheme whereby one Member of House or Senate can outvote two, because that is an impossibility in nature. Consequently for nearly two decades, standing outside the breastworks, it was our privilege and our duty to criticize the handiwork of our political opponents and theirs to explain and defend their conduct, which they did with great arrogance and great plausibility, frequently making the worse appear the better cause. Listening to them I often recalled the statement by Charles Dickens, of blessed memory, that when a reporter he sat under the gallery of the House of Commons night after night recording prophecies that were never fulfilled, predictions that never came to pass, and explanations that were only meant to mystify. For years it was the regular practice for Republicans to point with pride and for Democrats to view with alarm.

Now, all that is changed. Positions are reversed. The shoe is on the other foot. We are at the bat. We hold every post of vantage—White House, Senate, and House of Representatives. Our legislative handiwork is on trial at the bar of public opinion. We must answer for our deeds done in office, defending, explaining, upholding. Our political opponents are on the outside of the breastworks criticizing and with powerful searchlights are looking out for flaws in our legislation. It goes without saying that our enactments are not perfect, for no creation of human hands, human minds, and human hearts is perfect; but notwithstanding the spots which astronomers have discovered on the sun, that great luminary continues to light, warm, and fructify the earth, and Democratic legislation, notwithstanding such flaws as may be discovered, will bless and prosper the American people.

Incidentally, it may be appropos to state that critics have their proper function and serve a useful purpose, while those who are faultfinders—merely that and nothing more—are public nuisances and should be abated for the public good.

I am not complaining because our Republican friends criticize us, if they can find anything upon which to base their strictures legitimately. I could not complain with a straight face and a clear conscience, for I criticized them for a quarter of a century for what I deemed their sins of commission and omission; but I am firmly convinced that we had more and better reasons for criticism than they have.

In any country whose institutions are based on popular suffrage the Government is necessarily and inevitably a government by parties. In my judgment, the sole function of a political party is to promote the prosperity, the happiness, and the glory of the American people. If it fails to do that, it has no reason for being. Democrats are striving unceasingly to improve the conditions under which we live by distributing both the benefits and burdens of government justly and impartially among the people, giving to all an equal opportunity in the battle of life. I am fain to believe that all Americans are patriotic. While we all earnestly desire to promote the public weal, we differ as to what measures will accomplish it, and upon these differences as to what is best for our beloved country political parties are founded; and the political party which serves the country best is the best political party. It goes without saying that I believe the Democratic Party the best; otherwise, I would not belong to it.

Toward the end of his heroic career, St. Paul uttered his proud boast:

I have fought a good fight. I have kept the faith.

Democrats can, without exaggeration or bad taste, adopt as their own those inspiring words of the great Apostle to the Gentiles.

By sinking personal differences, by subordinating private ambitions to the public welfare, by adhering closely to principle, exercising the widest latitude in nonessentials, by moderation in council, thrashing out our differences in a spirit of brotherly love, we have surprised ourselves and astounded our foes by the quantity and quality of the work accomplished—all, as we hope, for the good of the Republic. Verily, "We have fought a good fight. We have kept the faith."

The Baltimore platform contains a multitude of promises. We have redeemed several of them, are in process of redeeming others, and purpose to redeem them all, as honest, courageous, patriotic men are in duty bound to do. While all promises should be religiously redeemed, they differ in importance, even as one star differeth from another in glory.

We promised to revise the tariff downward. We have done that. There was no occult meaning in the promise. There was no hesitancy in its redemption. We passed the best tariff bill ever placed upon the statute books. The income-tax feature alone would entitle the Underwood bill to the place of honor among revenue bills, if it possessed no other merit. That bill goes far to remove taxes from things which people consume and to place them upon what people possess. I predict now and here, without the slightest fear of successful contradiction, that even should the Republicans ever return to power, they will not dare to repeal the income tax. As a feature of our fiscal system it has come to stay.

The Underwood bill was bringing in ample revenue to run the Government until the European war cut off a large proportion of our receipts from the tariff and forced the special tax bill, which passed the House and is now being considered by the Senate, and by which it is proposed to raise the hundred millions a years asked for by the President. Some persons solemnly asseverate that the Underwood bill was not producing sufficient revenue to conduct the Government and that we are passing this war-tax bill to conceal the deficiency, but the official figures flatly contradict their assertions.

While nobody desires to pay taxes and while it is always an unpleasant duty to levy taxes, no good citizen desires to see the Government crippled in any of its legitimate functions or to see its credit injured even in the slightest degree. Josh Billings, in his homely philosophy, said: "The best place to have a boil is on the other fellow." So with taxes, and the debate in the

Senate is a struggle as to locating the tax. Every intelligent person knowing that the Old World war created the necessity for the extra tax bill, I am fully persuaded that our friends, the enemy, will have hard sledding in their endeavor to make political capital out of the special tax bill. It is not the first case wherein a drowning man has caught at an unavailing straw.

We promised to remodel and improve our currency and banking system. We have done that. The old system was antiquated, inadequate, a thing of shreds and patches. The new system is admitted by all who have studied it to be a vast improvement on the old one, better for home uses, much better for increasing our foreign trade, one of the most important and necessary tasks that lie before us.

We promised to enact a more stringent antitrust law, and we have done that.

We promised to pass sane and just conservation laws, and we have done that.

We promised to pass laws for the purpose of securing fair elections, clean elections, free from the corrupt and excessive use of money, to the end that the Republic may endure and that poor men as well as rich men may aspire to office, and we have done that.

We promised to pass laws to improve the condition of our sailors and the laborers of the land, and we have done that.

Many other promises have been redeemed, and we will redeem the rest if the people give us a chance by electing a Democratic House. Rome was not built in a day, and it was not possible to redeem all the promises of the Baltimore platform in 18 months, for the capacity of men to labor has its limitations.

Abraham Lincoln said that it is a bad plan to swap horses in the middle of the stream, a saying which fits the present political case like a glove. In 1912 the American people placed Democrats in power because they were weary of Republican policies and desired a trial of Democratic policies. We are in the midst of an honest and successful effort to enact Democratic policies into law, and we ask the voters of the land not to cut us off in midcareer by doing the unwise thing of swapping horses in the middle of the political and legislative stream—unwise according to the greatest Republican that ever lived, one of the greatest of all Americans.

PEACE.

Perhaps—who knows?—when President Wilson has finished his course as Chief Magistrate of this mighty Republic, and when historians come to assign his place in the pantheon of fame, they will pass over the great domestic measures of his administration, such as tariff revision, currency legislation, and so forth, and declare that his successful efforts to keep the United States out of war constitute his clearest title to the gratitude of his country.

In his famous first inaugural address, which has become a classic, and which every boy and girl should commit to memory as a literary exercise, Thomas Jefferson stated our ideal relations with foreign nations in these words: "Peace, commerce, and honest friendship with all nations; entangling alliances with none"—words fitly spoken, and therefore "like apples of gold in pictures of silver."

That is the sum and substance of our international creed, to which we have adhered without the shadow of turning. A wiser or a nobler creed no nation ever had.

Its latest exposition is found in the terse, luminous, emphatic, opportune neutrality message of President Woodrow Wilson—a proclamation which all good and sensible citizens, of whatever persuasion, political or religious, uphold and applaud.

Americans are a peace-loving people. We believe in John Milton's fine saying: "Peace hath her victories no less renowned than war." President Wilson expressed with great delicacy and felicity the sentiments of all true Americans when he tendered his kindly offices to the belligerent powers in order to stop the titanic struggle across the sea. Fortunate in his coign of vantage, happy in the confidence of a powerful people, let us hope that he will succeed in his philanthropic endeavors, and that upon him will rest the blessing vouchsafed to the peace makers in the sermon on the mount.

When a boy back in the hill country of Kentucky I attended an election for the first time and saw four men shot during the day. One man fired six bullets at another man, and, missing his intended victim, wounded an innocent bystander in the leg. In this astounding Old World conflict America is the severely injured innocent bystander, and from a natural desire not to be injured any more, as well as from motives of friendship and humanity, we wish to see a speedy end to hostilities.

The first reason why we desire peace in trans-Atlantic countries is that we are all akin to somebody over there, and our hearts go out to our kindred in their sore distress. This applies to us all, whether our ancestors came over 300 years ago, as mine did, or at a later time. It applies with peculiar force to our 10,000,000 citizens who were born in the countries now in battle array.

Another reason why we want peace is that the war has disturbed almost every business in which any of our people are engaged, entailing sorrow, suffering, and want on millions of Americans who had no hand whatsoever in precipitating the awful situation.

Who started it no man seems to know. What it is about appears equally obscure. In his celebrated poem, "Blenheim," Southey caused old Caspar to give his grandson, Peter Kin, a glowing account of the battle, whereupon the boy propounded the pertinent and far-resounding question, "What good came of it at last?"—a question which has not been answered to this day. So, perhaps, it will be with this war—the bloodiest in all the hoary register of time.

No matter who got it up, no matter what it is about, we fondly hope and fervently pray for its early conclusion, not only for the sake of humanity and civilization, but for the sake of our own prosperity and happiness. We take both an altruistic and a selfish view of it.

In 1823, when the Greeks rebelled against the Turks, Daniel Webster in a memorable speech appealed to "the moral sentiment of the world," which has never been appealed to in vain.

That is what this mammoth audience is doing here to-night. That is what millions of American citizens have done in other meetings for the last month all over the land. That is what almost the entire American people did last Sunday, when, at the call of the President, they assembled with one accord in their usual places of worship and prayed to Almighty God for peace.

The noblest words that ever fell from martial lips were Gen. Grant's—"Let us have peace!"

Good men and good women will continue their unselfish and humane labors for peace till this stupendous struggle is closed and until—

The war drums throb no longer,
And the battle flags are furled
In the Parliament of Man—
The Federation of the World.

On Mount Ararat.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. COX,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech made by the Hon. John Skelton Williams before the Indiana Bankers' Association at Indianapolis a few days ago.

The speech is as follows:

ON MOUNT ARARAT.

[Address of John Skelton Williams, Comptroller of the Currency, before the annual convention of the Indiana Bankers' Association at Indianapolis, Ind., Sept. 29, 1914.]

Mr. President, Gov. Ralston, and members of the Indiana Bankers' Association, as you are bankers, with the public as your customers, and I am Comptroller of the Currency, with you as my customers and bosses, it is inevitable that any talk between us shall be of banking, currency, finance, and allied subjects. We are associated mysteries. As all of you know, the conception of the average citizen regarding your functions, powers, and duties is very vague, and as to what I am supposed to be and to do officially the ideas of some of our statesmen are dim.

Your distinguished fellow citizen, the second officer of the Republic, to whom I am largely indebted for the honor and very great pleasure of being here, said that in accepting the Vice Presidency he sentenced himself to four years of silence. With the American people generally I am glad his buoyant spirit and bubbling thought force him occasionally to issue himself a parole and let us hear from him, for always when he does talk for publication he talks wisely, strongly, incisively, and with a delightful flavor of the American and Indiana humor that is effective, because it is common experience put into words and common sense expressed pithily and shrewdly. As his office imposes a certain amount, at least, of silence, mine means protracted periods of obscurity. I am the trouble wagon called

out for emergencies, a force I hope sometimes felt, but rarely seen, and yet more rarely heard, except now and then at some quiet, friendly gathering like this. It was but a few days ago that a relative of mine from a New England State, being in Washington, called up the Treasury Department by telephone to inquire if I worked there, or if not, if they knew where I did work.

Among ourselves as mysteries talking together, we will discuss some special phases and aspects of banking, currency, and business, and especially their relations to present conditions in the world—the unprecedented situation and dangers, tremendous responsibilities—even more tremendous opportunities and promises before us.

Before beginning on the broader and more general lines I ask to be allowed to say a few words of local application. I am a Virginian. You may not suspect it, but it may as well be confessed that we Virginians are a vain people. We like to boast—there is no use denying it—of the men and women our State has given the country and the world, and we delight when we can claim some ownership in, and kinship with, all the successes that develop. If we can not exactly prove that they are products of our soil and air and water—and some other elements of life we have been in the habit of furnishing, such as mint and its natural allies and companions, but from which recent events threaten separation—we glory in assertions that any large success is of our blood and stock and breed. Therefore we are happy to consider Indiana as one of Virginia's daughters and one of the favored and most beautiful of them all, just now approaching the perfection of her glory and growth, although two years hence she will attain the respectable age of 100 years as a State. We are not content with exulting in the President as a son, but insist on having it known that, although Indiana actually bred and reared and presented the Vice President and a very distinguished and honored Senator, both are grandsons of Virginia.

This is not a political address intended to reproach or exalt any party, but all of us of all parties realize now that wretched mistakes were made when the judgment of the country was disturbed 40 years ago, in the processes of reconstruction, by natural but bitter and dangerous sectional feeling. No southern man or Virginian who lived in that time can forget, or should forget, that in our misery and fear, when the foundations of our civilization were threatened and when thick clouds obscured our hopes, Indiana was one of the Northern States to which we looked with confidence for help, whose powerful hand we felt was friendly while so many other hands were lifted to smite us. That time is buried and gone; but the duty gladly performed of forgetting old animosities does not carry with it forgetfulness of old friendships and affections, and gratitude for comfort and aid, given when both were sorely needed. We like to think that much of the conservatism and solidity and directness and force of thought that have guided your people are attributable to your Virginia lineage. We are very proud of this daughter of ours and of her many achievements, of her material greatness and intellectual activities. Perhaps one of your most remarkable feats is your bestowal upon a homely and derisive word like "Hoosier," dignity and beauty—a name fastened on you by some ancient and buried enemy. By sheer power of merit, of fine and rich thought, exquisite imagination, and noble workmanship your men and women have added great contributions to English literature, destined to live; have won for the State a high place in the love and respect of the reading people of this generation and of generations to come; have taught the world that the word "Hoosier" connected with verse or story or essay is almost a guarantee of excellence, of sweet or stirring appeal to its interest, its sensibilities and appreciation.

Now, having gratified my own vanity as a Virginian with a well-deserved and utterly inadequate tribute to your virtues and excellencies, I shall hope to detain your attention with some compressed thought on a vast and ever-widening subject.

Nowhere in the history of the world is there a record of such a situation as that of which we here in this room to-day are a living and potent part. Never before has any country been in a position in which our country is. The possibilities before us, pressing upon us ready for our thought, work, and faith to make them realities, are of immensity and grandeur almost beyond human conception.

Never before since civilization took shape and society began to order itself have the banking interests and directors of finance and commerce of any country had such power to do wonderful work of patriotic and broad, permanent construction, or to allow confusion and failure or force ruin, as is in your hands and the hands of your fellow bankers of America.

This Republic is the Mount Ararat of a universe overwhelmed by a deluge of blood, of confusion, and raging strife, of wild desolation. This is the one sure, established place where hope is springing instead of being destroyed. Everywhere else the hideous harvests of death are being gathered by day and by night; here we are garnering the harvests of peace and life and freedom.

We may pause a moment to recall that to the thinkers of bygone ages the one assurance of stability was centralized, concentrated, absolute power in the keeping of one strong man. To them self-government by the people meant chaos. To-day the solitary, stable, unshaken, and undisturbed part of the earth to which humanity may turn its eyes and its thought is that governed by a hundred million free individual rulers, and the centers of the horror and storm are where hereditary absolutism is accepted as the safest and the ideal government.

Surely the majestic dream the dreamers dreamt of a powerful people ruling and regulating themselves is vindicated. Surely the higher, wider, sweeter dream of such a people leading and lifting up all the nations, by methods gentle but irresistible, causing tyranies to vanish, banishing war, righting wrongs, and sending where the four cardinal points of the compass direct the conquering inspirations of liberty and love is nearer to realization than ever before. Considering our daily lives and our contact with the small and ignoble, the base and petty things of human nature, and of our local and State and general politics, the most hopeful of us sometimes are tempted to discouragement and to the thought that we have failed; that the old dreams of the fathers and builders and prophets never can come true. That thought is a treason of the moment, born of weakness and weariness and the political disappointments that come to all of us. It is treason to the time, to the facts, to the crowding events of this pregnant stirring period, to ourselves, our fathers, and our children. Such thoughts, I say, are treason to the flag and the traditions, the lessons, and the deathless and hallowed purposes it represents on every sea and beneath all the variant skies They are treason to the deathless and God-created principle of the Republic, of free and representative self-government; treason to ancient aspirations and present duties and new and assured hopes.

It is the task of us practical, money-handling, plain men, trained to definite action and the handling of affairs, to build to strong actualities the visions of the best and boldest of mankind. We must work and toil with real things. The Government, the bankers, and the financial leaders, the thinkers, the men active in politics, and the masses of the people must unite thought and effort to the ends desired by all and necessary for all. The idealist, with his high conceptions, sometimes apparently misty and vague, is helpless without the practical man, accustomed to working with the knowledge that 2 will come to 4, and that no proposition will find lasting favor unless a prospect of substantial advantage, benefit, or profit of some kind can be demonstrated. The practical man without ideals and something beyond his immediate daily concerns becomes a sordid and useless machine. All of us Americans are here together on this Mount Ararat of ours, established for us and by us, this great land of peace and abundance and hope, this country touching on each side another nation, with hundreds of miles of frontier lines and not a foot of fortification on either side.

We must work to give as well as to take. We are, as regards the fearful wars of Europe, put, almost without act or will of our own, in the position of a benevolent Iago, "Now, whether he kill Cassio or Cassio him, or each do kill the other, every way makes my gain."

We have the right to use thriftily what fortune or the follies or crimes of others may send for our advantage, but we have the plain duty to use our peculiar conditions and the strength they give us to try to make the world and the human race happier and better. As we do that, the reflex action and results must make our own Nation happier, better, richer, and more prosperous. No other people has been permitted, as we are now, to offer rescue to mankind, to be the firm foundation for the rehabilitation of civilization and order, to deserve and win the gratitude, the confidence, and the affection of every nation, of every tongue.

Our first step and duty has been and is to assure our own safety, to establish our own strength, to care for our own people. Through the years of a long peace we have been interwoven with all the countries by commercial and social connections and ties, by association, by mutual interest and dependence. For us the rapidly succeeding declarations of war and the immediate consequences were like a sudden and violent amputation. Holding steadily to the maxim bequeathed to us by the far-seeing Washington, we had avoided entangling political alliances; but in business we were in partnership with all the countries which without warning began to tear and destroy each other. When

the history of this bewildering and fearful time comes to be written in the tranquillity of restored peace and reasoning resumed, one of the most wonderful facts will be the serenity and firmness and ready resource with which the business and the Government of the United States endured the shock of severance in a day of thousands of ligaments and nerves and points of contact binding us to the old countries. Yet we had thrown before us a multitude of unprecedented problems and unexampled and unforeseen conditions. Almost automatically, as a man throws up his arms to fend his face when he sees a blow coming, the great exchanges were closed. That was a simple, we might say, instinctive and defensive measure, but it was heroic and effective.

As we stood we were subject to drains on our resources and demands on our credit by the cables under the sea and the wireless in the air, through the heavens above and the waters which are under the earth; and along the surface of the sea we could send nothing of our heaped-up stores of actual substance to bring money or credits. Our money assets were assaulted by invisible forces of suction. The closing of the exchanges here and the moratorium declared in Great Britain were like anesthetics to stop nerve action and prevent death from shock and strain. The results so far have been the striking contrast of no panic or ruin here with eight declarations of war among powerful nations within a week and paralysis of all international traffic, whereas in 1893 dangers in no way comparable to those we have recently faced brought a procession of failures and bank suspensions, the closing down of mercantile houses and industries, and terrific losses, extending from one ocean to the other.

Yet, while the methods used were prompt and heroic, they would have done harm rather than good, would have spread demoralization and given new impetus to fast-spreading fright, but for one great, solemn, beautiful fact, underlying everything and representing the real philosophy and strength of the Republic. That fact is the confidence of the people in themselves and in their Government. The American people naturally are fearless in the presence of any danger they can see and face and understand. That fearlessness and dauntless courage, not to be alarmed by any emergency, proceeds from their confidence in themselves and in their own power and honesty. When they know they are in direct control of their own affairs through their Government, that their interest and welfare are the first thought of sagacious and chosen rulers, no disaster or threat can stampede them.

I am not here to talk politics or to ask approval for the administration, but I think all of us business men—Republicans, Democrats, and Progressives—know in our hearts that but for the clearing up we have had, the knowledge the Republic has been given of the limitations of the power of great corporations, financial institutions, and leaders, and the conviction that this Government of ours of the people, by the people, and for the people is now ready and able to protect us from unnecessary or artificially created stringencies, we would have had dismay instead of assurance, and frantic anxiety and demoralization instead of quiet optimism.

It is not out of place, I trust, to say just a few words of our new banking and currency law which will go into effect in a few days.

The Federal reserve act is not a measure which serves only banks and their customers, but it is destined, I firmly believe, to exert a powerful influence for good on the lives and fortunes of all classes of our population. It is the instrumentality through which the American people will be freed from the domination of a financial oligarchy. It restores to the channels of commerce and industry hundreds of millions of dollars of money which was drawn from the sections where it was most needed to lie idle in the vaults of the big banks in two or three cities, or else be loaned by those banks largely on demand loans in the stock market. It provides for a system to meet completely and effectively the requirements of expanding or contracting business according to the seasons and the varying conditions, and it accomplishes along the most natural lines the mobilization of the bank reserves, and devises the methods by which they can be most safely and fairly utilized.

It practically removes from honestly and capably managed banks all fears of runs or the dread of suspension or failure by providing the means for quickly converting into currency the commercial paper in which its funds may have been invested.

By the system of clearings which the bill provides for it is estimated that several hundred million dollars heretofore kept in transit and in unavailable balances will be released for the needs of business while the delay and expense of making collections of checks will both be eliminated.

It opens the way for the establishment of branches of our national banks in foreign countries so as to secure for this country a larger share of the world's commerce. It removes the barrier which prevented the national banks from lending on real estate and makes improved real estate acceptable as a basis for loans under conditions clearly and conservatively defined so as to bring into active commercial use one of the most substantial of all securities.

A curious and unforeseen ramification of the blessings of the new system was called to my attention the other day when one of the Government's most important health officers told me that he had hailed with the deepest satisfaction the passage of the Federal reserve act, "because," said he, "I feel that in its operation it is going to contribute largely to the public health." As I was a little slow in seeing the connection, he explained that his study of the measure had convinced him of its supreme and far-reaching value and that he believed it would effect a gentle revolution and social reorganization which would bring about a stable prosperity in which the masses of the people would share more equitably and more liberally than they ever had before; that their scale of living would be raised; and that they would be in a position to give attention to matters of health and hygiene more than they have been able to give under the exigencies and conditions in which they have lived in the past. That is incidental, but it goes to confirm the teaching that a good and wise law blesses and helps, as a bad or ill-considered or outlived law cramps and afflicts the people who must live under it, in every department and interest of their lives.

I shall now ask your indulgence while I review briefly a few recent leading financial events of these historic times.

Although this country had shipped abroad between May 1 and August 31, 1914, in payment of securities sold here for foreign account and in payment of debts due abroad, including balances due by importers, more than a hundred and sixteen million dollars of gold, the outbreak of the war found us with debts falling due in European countries between August 1 and January 1, 1915, amounting, as far as can be estimated to between three hundred and four hundred million dollars. The largest portion of this indebtedness due by any one borrower was represented by the loans placed abroad of the city of New York, amounting to some $82,000,000. Had the world been left at peace our exports of cotton, of food products, and other merchandise between August 1 and January 1, 1915, normally would have amounted to more than $1,000,000,000, or enough to pay off the floating debt to Europe, to settle for all imports during the same period, and show a handsome balance due us. But when the 1st of August came, instead of launching our fleets of merchantmen laden with the fruits of our most bountiful harvests of cotton, wheat, and other merchandise, we faced the forbidding clouds of war, suddenly gathered. All Europe seemed to rush to convert our securities, offering as they did better hope than any other for realization into gold, while all markets were closed against what we had to sell. It was necessary for us to seal our exchanges against our bonds and shares, as Europe had closed hers to our cotton, wheat, minerals, and manufactures. By this action one pressing and imminent danger was met and averted.

On Saturday, August 1, following the dumping upon the market for foreign account of an avalanche of bonds and shares held by foreigners, the reserves of the New York banks fell more than $40,000,000 below legal requirements. The stock exchange had been closed, but the drain upon the resources of the New York banks had set in from many directions and there was alarm and cause for it. Responding promptly to urgent appeals, the Secretary of the Treasury went over to New York Sunday afternoon, August 2, and held a conference that night with a score or more of the presidents of the leading banks and trust companies of the metropolis. He heard their statements, analyzed the situation quickly, saw what was necessary to enable the banks to meet the demands upon them and to restore confidence, which had been so racked by the world-shaking events of the week. Confidence in the Government, the people, and the ultimate resources of the country was absolute, but there was need to meet immediate and urgent emergency. Knowing that confidence and the soundness of the basis for it, the Secretary announced that the Government would supply the New York banks forthwith with as much as $100,000,000 of additional currency if it should be needed. Anticipating the situation as it was laid before him at that conference, he had that Sunday morning, before leaving Washington, directed the shipment by express to the Subtreasury in New York, for the New York banks, of $40,000,000, and the Treasury forces and the express companies at that moment were taxing their resources in hurrying the execution of the order.

The announcement that the Treasury had arranged to give the New York banks a hundred millions of currency was flashed that night over the wires to every section of the country, along with the assurance that the New York City banks were prepared

to honor all requests of their country bank correspondents for shipments of currency against their balances. Therefore there was no suspension of currency payments or premium on currency, as in the comparatively limited stringencies of 1893 and 1907.

A few weeks later leading bankers from New York came to Washington to ask if the Government would lend its support in enabling New York City to raise through a syndicate of bankers the funds necessary to provide for the city's loans of $82,000,000 just maturing abroad. They were assured by the Secretary of the Treasury that the Government would cooperate by providing the banks with a further amount of currency and would accept a fair proportion of New York City's new notes or bonds as the basis for such currency, in order to help the bankers carry out the plan for the funding of the city's floating indebtedness, and since that time the Treasury Department has actually furnished to the New York banks $50,000,000 of additional currency, making the total amount accorded to the banks of that city from the Treasury since August 1 more than $140,000,000.

Is it not deeply significant and enheartening, as indicative of a new policy on the part of our Government, that in this emergency the administration of the restorative was not, as in the past, confined to the banks in New York City? For under the direction of Secretary McAdoo more than $160,000,000 of currency has already, since August 1, with impartial hand, been distributed to the national banks in every section of the country where it has been needed, from Boston to San Francisco, and from the Great Lakes to the cities on the Gulf, helping to dispel and neutralize the poisonous fumes of distrust, alarm, and fear which had begun to manifest themselves.

In its efforts to provide for present and to guard against further and future demands the country has been steering a cautious course between two perils. Money enough for ordinary and extraordinary requirements incident to conditions unprecedented, and not only to move the crops but to hold some crops, the normal demand for which was suspended, was urgently needed. Yet such inflation of the currency as might threaten our gold reserve and impair our public credit and the value of our money would be suicide. Self-preservation demands first the preservation of our credit. With that wounded we would be unable to maintain ourselves; miserably powerless to help others, left impotent and feeble and shamed, while opportunity turned its back on us. If we allowed the currency supply to become inadequate for our requirements, we might inflict the penalties of confiscation and ruin on the innocent many to the enrichment of the designing and remorseless few.

If we should allow inflation of the currency away from safe and solid bases of actual and irreproachable value, we would be like a man drinking himself to frenzy and torpor while his honor and the safety of his home depended on his steadiness and strength. Therefore we have felt and tested and studied and have striven to work and build swiftly but carefully; to act promptly, but with thoughtful provision for the situation as it is, while keeping alert eyes on the possibilities of the days and months to come.

In this work all of us have united. It is deeply gratifying to me to be able to certify how much the country owes of its growing prospects and increasing stability to the genius, skill, and generous, patient, broad patriotism of its bankers in all sections. Those of New York, Chicago, and other large cities have been not only willing but zealous in cooperation and with valuable and timely service. Most of them have tendered their resources and their services to help the public interest. But the people of all grades and sections have, as a general rule, done what they could to forward a difficult and complicated labor.

The administration has been given full cause to feel gratefully and exultantly that, when the common defense and the general welfare are involved, the free citizens of the United States have no lines of differences in politics, in sections, in social grades, or the distribution of the favors of fortune. The people, regardless of party, have given cordial and cheerful sanction to every movement and act approved by their reason as being for the good of the Republic.

The work of adjustment and of getting the machinery of business on perfect foundations and oiled and leveled is not completed, but it is well started with safe and efficient methods. We and our business machinery will be required to work not only for ourselves, but for the world. The task is enormous, but it is in conjunction necessarily. In protecting our own stability, we protect the world's finance and commerce. In conserving the interests of the other nations, we conserve our own and improve the opportunities that practically are forced upon us. Along with illimitable responsibilities, the prospect of illimitable expansion confronts us. Just now and because of the sudden halting of our delivery service and closing of the markets, we are a debtor people. We are taking days of grace because we have assets with which to pay and know that they will be needed desperately, and soon.

Europe is believed still to hold several billions of our securities; exactly what amount, it is quite impossible to determine accurately.

If we opened the stock exchanges and allowed this indefinite mass to be unloaded on us with the frantic purpose to get our gold at any cost, no one can quite foretell what the consequences would be. There are only three methods by which our international debts can be paid; by shipments of gold or silver, by shipments of merchandise, or by the sales abroad of securities. If American securities owned abroad should amount to, say $4,000,000,000, and all holders should offer them for sale and demand gold for them, our entire gold supply of one and seven-eighths billion dollars, by far the largest gold holdings of any nation on earth, would be insufficient to pay for half of them; therefore it is preposterous to talk of taking them all back at once and settling for them now in gold.

It is equally idle to talk of paying for them by the sale abroad of other securities; therefore it is evident that if Europe wants to send back to us our securities, she must take payment in merchandise, in the equivalent of gold. When the European countries bought our securities, they did not pay for them in actual gold; they paid for them in merchandise, and should take merchandise in payment when they sell them back.

It is not believed that the American securities owned abroad as late as 1883 amounted to as much as $500,000,000, probably considerably less. The securities at this time owned in foreign countries have therefore nearly all been acquired since 1883.

Now, from 1883 to 1914 we have brought in from foreign countries only $11,000,000 more gold than we have sent abroad; therefore, if Europe has accumulated since 1883, say three and a half billions of American securities, it is evident that they could not have been paid for in gold, but were paid for in trade balances and merchandise.

From 1883 to 1913 the figures show that the total value of merchandise and silver exported from this country exceeded in value the merchandise and silver imported by nearly $10,000,000,000. In other words, the net balance of trade in our favor for the past 30 years has averaged more than $300,000,000 per year. If we add to this the sale and shipment to Europe of, say, an average of a hundred millions of securities per annum for the past 30 years, there would be a total apparent balance of trade in our favor, arising from the movements of gold, merchandise, and securities, of more than $400,000,000 a year, which vast sum, it is claimed, has been offset and consumed principally by the sums we have had to pay for ocean freights and by the huge sums spent annually by tourists abroad and the amounts paid for interest and dividends to foreign investors. From these figures it would appear that it has taken practically our entire trade balance and the proceeds of all securities sold abroad during this period to recoup the annual expenditures made by the two to three hundred thousand American tourists in Europe; to pay the carrying charges to foreign ships for the transportation of American commerce, and for foreign interest and dividends.

My study of the problem has led me to the conclusion that we will not find it difficult to adjust ourselves to buy back in the course of a few years—if they should be offered to us—and pay for all the American securities that Europe has or which it may desire to sell. We have in abundance the raw material for the food and the clothing that Europe, Asia, and Africa must buy. With these and other products needed and demanded by the world, we can cancel our obligations and redeem our securities at fair prices to their holders instead of sacrifice and panic prices.

In the eight years following our Civil War here, notwithstanding the havoc it made in the South, there was through the North and West, as we all know, bewildering growth, development, and activity, until they went too fast and too far, and the development and business activity culminated and collapsed temporarily in the disaster of 1873. Judging by all experiences of the past and all the visible facts and signs of the present, a time of growth and expansion, of creation and extension in all directions, is just ahead of us. The Panama Canal of itself promised us new opportunities which dazzled foresight and made prediction lose itself in an infinity of possibilities. Now, just as we have completed this new, short highway of commerce from one side of the globe to the other, we are confronted with a new and endless universe of problems, and in each problem opportunity to bless mankind and ourselves. Strong and powerful, but just and compassionate, we must be prepared to meet the rush of people fleeing to us from war and

war taxes and war ruin; the rush of demand for bread and meat and clothing; for fuel and building materials; the rush of demand for money for restoration and new beginnings where war will leave chaos and emptiness.

Our task is not only to hold ourselves steady and secure, but presently to help feed and clothe and shelter and finance the nations, because we are the one sure, solid, established place of peace and of production with power unimpaired. We must look not only to our foundations, but to indefinite enlargement and elasticity of our power and facilities for doing business.

You bankers—you of Indiana and of all the other States of our Heaven rescued and maintained land—must do a very large share of the preparation, the adjustment, the doing, and the establishing.

We can prove ourselves honest and kindly debtors and merciful and considerate creditors. We will soon be looked up to as the storehouse of the world. Our cotton fields already furnish two-thirds of the cotton which clothes the human race, while from our harvest fields is already being shipped the grain to supply bread to the millions of Europe who have now become dependent upon us for their food supply. By the ways of peace and the uses of commerce we can and will not only strengthen our influence where it exists already and tighten our hold on those with whom we have traded and exchanged, but we will widen our sphere of operations through a great part of this great Western Hemisphere and send our flag and our agencies where they are strangers now. Our conditions for doing all of this great work are better than ever before in our life as a country.

We are correcting the tendency toward huge consolidations, to inordinate individual accumulations, and to isolation, and the bludgeoning and suppression of individual enterprise and initiative. We are calling back and restoring the dash and daring and restless alacrity that spring from free and fair competition. We are distributing ambition among all of our citizenship by restraining the facilities for acquisition by small and select minorities. We are sweeping away many clouds of doubt and distrust, the more dangerous because by imagination and exaggeration they are magnified and given shapes of dread portent. We are breathing a cleaner and more stimulating atmosphere.

I believe—and those of you who do not agree with me now will, I think, share my faith within a year or two—that our new banking and currency laws give us noble and powerful machinery with which to change dangers to blessings and enable us to deal with the most rapidly widening demands on our energy and resources.

We have a Government founded on broad, far-seeing, sagacious thought, on the highest philosophy and noblest purposes. It is established on the love and confidence of a free-born and intelligent people. Fast as we have gained in wealth and strength, we have gained more and faster in breadth, in spirit, in the true religion that recognizes human brotherhood and our obligations to each other, in that purest of piety that teaches service as our highest function and magnanimity and justice as the first and best achievements of a great people.

So we stand among the turbid surges of a troubled and stricken world as a mountain of peace and rest and refuge, or, in the words of the Psalmist, "as the shadow of a great rock in a weary land."

We will be the gathering place for the renewal and distribution of hope and purpose, for the restoration and purification of a civilization drowned in blood and wrecked and dismantled by furious and reckless passion.

Tragic and pitiful as it is, we may find gratification and hope in the constant appeal made to us by one strong people or another on the means and methods used by brave men of different tongues and birthplaces in deadly strife with each other. God forbid from us the vanity that would assume for ourselves superiority over any of these, our brethren, at war. May God and our memories protect us against the sin and arrogance of self-complacency or the Pharisee's thanksgiving that we are not as other men. We need not look back far to know of our own sins and weaknesses and follies, blessed and kept and led as we have been. In profound gratitude to the Power that has delivered us from the consequences of them and in deep humility we may find our gratification in the hope that the dove of peace, once sent winging over the deluge, may find a resting place here and carry from us an acceptable olive branch.

We do not invite such opportunity, but we would welcome it, and all of us—I am speaking only for and to representatives of the conservative and thinking people of our country—would unite in the ambition that we might be the means of helping not only toward permanent peace in the world, but toward actual justice and the betterment of mankind. We can afford to speak for peace, because we have proved sternly that we do not fear war when it is necessary and just.

Our voice for peace is not soprano expostulation. It has the deep, harsh, masculine note of big guns, well served at efficient target practice. If the time comes for us to urge or invite or help toward peace, it will be not because our interests require it or because we are nervous or fearful, but because as a community of free and peaceful people we desire very earnestly the deliverance and advancement of our brother man. We will talk peace as strong and prepared men talking, face to face, to strong men.

In any case we will stand a living monument to the truth that the statesmanship of peace and patience is the most successful, that the diplomacy of mercy and exact honor is the wisest, because directed by the spirit of eternal wisdom.

Equipped for emergency as we never before had been, we have met this fearful stress undisturbed. We meet opportunity such as never has come to a people with purposes higher and wider and purer, we trust, than any people ever have felt—with the power gathered of peace, the resources derived of honest industry, and the will born of our own self-searching, to lead the world, to be its dominating influence, and to use that influence to bless and brighten, lift, and comfort all humanity.

National Issues—Why Republican Legislators Should Be Returned to Congress.

EXTENSION OF REMARKS
OF
HON. THOMAS S. BUTLER,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. BUTLER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a communication entitled "National issues, or why Republican legislators should be returned to Congress," by Prof. A. S. Boles, of Haverford, Pa.

The communication is as follows:

NATIONAL ISSUES.

WHY REPUBLICAN LEGISLATORS SHOULD BE RETURNED TO CONGRESS.

[By Prof. A. S. Boles, of Haverford, Pa.]

If the appalling war that has smitten Europe is extending its baneful effects to the remotest parts of the earth the millions living in our favored land are realizing the blessings of peace as they have never realized them before. Compared with this awful struggle to destroy life, how petty seems the contest among ourselves for the choice of men to legislate and rule. Nevertheless, every political election is an important event and should not be lightly regarded. There is a difference between men, parties, and policies; and though the consequences of neglect or misdoing may not be seriously felt to-morrow, they may, if disregarded long enough, accumulate until the people are rent by another war like that which tore them asunder half a century ago. Every whirlwind and tornado starts with a zephyr.

USURPATION OF LEGISLATION BY THE PRESIDENT.

The first issue to be noticed is the usurpation by the President of the legislative power. The Constitution has separated the three great functions of government into the legislative, the judicial, and the executive, and the wisdom of time has sustained this distribution of power. It is the business of the legislative to make the laws, of the judicial department to expound them, of the executive department, either alone or in harmonious working with the judicial, to execute them. This system has been in operation for a century and a quarter and has worked so successfully that not until a recent period has any thoughtless invader appeared. Not until the advent of President Roosevelt did any President ever seriously overstep the lawful boundary. As we all know, he was loud and forceful and, unable to content himself by doing the part assigned to him by the organic law, invaded the legislative department and sought to take the work of legislating away from its lawful keepers. President Taft, with a more conscientious regard for his duties, kept himself within proper constitutional limitations; but President Wilson, in utter disregard of them, is seeking to play the parts both of executor and legislator.

The Constitution provides what the President may do in the way of legislation. He may recommend by general or special

message that bills be passed; he may also veto bills that have passed for specific reasons, or, indeed, he may express his disapproval without giving any reason for his action. His power, however, goes no further. Neither he nor any member of his Cabinet, who are simply his assistants, has a right to prepare a bill and send it to either branch of Congress for its consideration.

On rare occasions this has been done, but Congress has always promptly frowned on such an invasion of its power. Still more clearly forbidden are the President and his assistants from enforcing their views on Members of Congress through personal interview or by granting political rewards and favors for compliance or meting out party damnation for refusal. No trace of such great and dangerous power can be found embedded in the fundamental law, and it was wisely excluded. It was never intended that the President, alone or with his assistants, should combine both functions of making and executing the laws. Nor can the President justify himself in the circumstances of the present day for assuming the rôle of lobbyist, as President Wilson has done; of conveying intelligence to legislators who differ from him in opinion that they must yield or suffer dire consequences. Yet these things have been done ever since the tariff bill was launched in the lower House of Congress. From the outset the President was a persistent director of the bill throughout its journey. There was not a moment when the President was not cracking his whip over legislators while it was on the way.

It was not only undignified for the holder of the presidential office to thus descend into the legislative arena and become a mere lobbyist; it was also contrary to his own preaching.

His friends seek to justify his conduct as a lobbyist on the ground that he only lobbies for good measures which ought to become laws. This is not safe ground. Assuming they are needed, a future President, intent on bad ends, might work great harm. Nor can one safely say the President may act as lobbyist to attain good ends but not bad ones. To yield so much to him is to transform him into both actor and judge and reduce the people to mere critics and sufferers.

It is sometimes said in justification of the President in thus taking on the duties of lobbyist to his other duties that it is the only way he can obtain the needed votes of his party to pass the desired measures. This, however, is no justification for his infringement. If his party will not pass the proper measures from the presidential point of view, the correct remedy is to elect men who will. If the people are unwilling to elect such men, that is strong proof that the President is wrong. In any case, the remedy is one for the people to employ—not for the President. If they wish different legislation from the President, it is not within his province to take the business away from them and make them simply puppets to register his wishes and decrees.

There is, then, no excuse for such usurpation of power by the President. Why, then, does he thus act? Is the reason really a failure of legislators to heed the will of the people? Nothing of the kind. It is the love of power, of domination, of running things. That is the nature of the man. Thus he acted as president of Princeton University until the majority, at least of the board, wearied of his rule. Thus he acted as governor of New Jersey. Like other strong-minded men, his greatest pleasure is in exercising his imperious will. Yet there is no reason for assuming that a strong will is a good will or a right will. Napoleon had a strong will, but for 25 years he terrified Europe.

HARMFUL TARIFF LEGISLATION.

The second issue that may be raised against the President and his party is for making unwise and disastrous changes in the tariff. The new law may be regarded from two points of view, the first as a political expedient to win voters. The assertion will hardly be questioned that the President and his party supposed that by reducing the tariff rates prices of many things would decline, and they would be hailed by consumers as deliverers. This was the chief end the Democratic Party had in view in amending that measure. Such, indeed, had been the effect on all previous occasions of remitting duties; a similar result, it was believed, would follow in the present case.

With few exceptions, no such result has followed. One of the most noteworthy exceptions is viola flannel imported from Great Britain. On this there has been an appreciable reduction. On linen, for example, on which there was a large reduction in duties, the retail figures have not been changed. The same remark applies to most of the things imported and subject to duty. On a very small number there have been slight changes, not enough to afford appreciable relief to consumers.

What, then, has happened? The foreign producers have obtained most of the benefit by adding all the reduction, or the larger part of it, to the prices of their products; and importers and purchasers from them have taken the remainder. That, in a general way, is the result of the changes in the law.

In 1872 it was proposed to remove the tariff from tea and coffee, whereby everyone was to have a "free cup." That had a joyous, exhilarating sound. There were objectors who assured the people that they would lose $19,000,000 of revenue without receiving any corresponding benefit. They declared that very likely tea and coffee consumers would pay quite as much as before. Their words fell on unlistening ears. That year there was a shortage of coffee, and the coffee growers very promptly added the amount of the duty to their product and the consumer paid the old price. There was a slight reduction on some kinds of tea. Nor can any subsequent change in the price of coffee or tea be traced to the removal of the tariff on these articles.

It may be contended that ultimately there will be a reduction in price springing from these tariff changes. This contention loses sight of the changed conditions of production and sale. The accumulation of wealth and expansion of credit enjoyed by producers have radically changed their condition. They are no longer under the necessity of selling, as they were at an early day, to the first customer in order to meet the ever-pressing demands of lenders to whom they were indebted for the means to produce. In other words, the modern producer has become independent, has ample means or credit, or both, and consequently has a more perfect command over the market than ever before. Formerly the consumer, in consequence of the needs of the producer to realize on his product as soon as possible, to a large degree had command of the market; now that control has passed largely and permanently to the producer.

This is the correct explanation of the fiasco which the President and his party have made in tariff legislation as a relief to consumers. The defenders of the President contend that he ought not to be blamed for not foreseeing this result, as a reduction in prices had followed all previous reduced tariff changes. The President's party may, indeed, be excused for not foreseeing them; indeed, for not seeing much of anything, since so many of them are recent attendants at Congress. The President, however, can not be spared, for he professes to know so much, and on that ground tries to justify his usurpation of the legislative province.

Anyhow, the failure of tariff legislation to bring relief to consumers is complete; the cold facts of prices, daily registered, are the unanswerable proof. Will time bring favorable changes? There is no solid ground for such a deduction. Possibly not all the price effects of the tariff changes on everything have appeared, but surely all the more important ones there are now known. Whitehouse Moses, therefore, has not found the promised land for consumers nor raised the slightest foundation for the hope that he ever will find it for them.

From another point of view, the President and his party have sacrificed a large revenue without any corresponding benefit to the people. On sugar $60,000,000 have been lost without any appreciable gain. The price of sugar was very reasonable before the tariff went into effect, and Mr. UNDERWOOD, chairman of the Ways and Means Committee, the most thoughtful Democratic Member of the House, was opposed to throwing away this vast amount of revenue, collected at small expense and borne so easily by the people. Other members of his party thought like himself, but the President was unyielding, and the huge cut was made. Had that been retained and expenses been kept within the proper limit, as the Republicans contend should be done, no new war tax would be required.

To what extent our impaired production is caused by the tariff and what by the war can not in all cases be easily determined. Nevertheless it is true that before the outbreak the production of some goods, especially hosiery, had been seriously affected by German imports. While consumers have not had the benefit of lower prices, importers have been sufficiently favored in the way of reductions to lead them to make large purchases, and thus American production has fallen off. This movement has not yet become general, and perhaps will not be, for, rather than have it succeed, producers, with the acquiesence of their employees, may cut wages. Ultimately one consequence or the other is impending—increased imports at prices that will attract importing purchasers, or a cut in wages large enough to diminish the cost of production and lessen prices. If in the end consumers should get the benefit of the reduction, it would be at the cost or loss of the workingman. This is the present aspect of the problem—if production is preserved and prices lessened, the workingmen must be the real sufferers.

DECLINE OF PROSPERITY.

The President and his party may be justly charged with checking the long period of prosperity that had prevailed, and of blighting the prospects of the industrial world. Two facts

can not be denied: At the close of President Taft's administration the country was everywhere soundly prosperous; to-day dullness in business and diminished faith in industrial enterprise is everywhere apparent. While it may be admitted that the war has hastened the downward movement, none will deny that the tide immediately changed with the incoming of the present administration. Faith in the future is quite as needful to sustain a sound industrial condition as present industrial activity. The moment the industrial world ceases to renew and expand decline begins. There is no plain on which the great industrial engine can long safely wait; it must always be in constant movement. If that movement is not forward, it is in the other direction. The President may term the unwillingness of men to embark in new enterprises a psychological movement; faith, no matter about name, it is a very real thing, and if that thing declines or dies, the effect is experienced by the individual, the community in which he lives, and by his country. And this change has happened; it is everywhere noted; the ill consequences are too clear and strong to be ignored. Business is drooping, dying like the closing event of the summer season.

There is a class of persons who have no patience with those who talk about prosperity, and who measure their country's greatness and happiness by this standard. They assert that this is a low, material, false standard; that the prosperity wishers have quite enough already, and will not suffer if their dividends are passed or reduced. We may at once dismiss this class of critics as well as those criticized with the remark that the latter is a very small class compared with the millions to whom material prosperity does possess a deep meaning.

To the toiling millions prosperity has a meaning which no well-wisher of them can deride. It means steady employment, wages earned and paid, food, shelter, clothing, and contentment for themselves and their families. Destitution in the essentials of living cuts into the very foundations of national existence and happiness. The man who thinks or talks lightly about prosperity in the largest sense is extremely shallow in his thinking and indifferent to the sorrows and miseries of his fellow men.

Since 1860, 54 years ago, the Republicans have been in power continuously, with the exception of two four-year periods. After recovery from the terrible blight of the Civil War there has been no long period of business and industrial depression except during these two Democratic administrations. On both of these occasions the stream of prosperity was interrupted by the changed policies of the administration. Tariff tinkering and the undermining of the faith of men in the future yielded baneful results. No one who has lived through these periods or who has carefully studied them has failed to discover the causes. The change began with somewhat lessened production, faith in the industrial future weakened, then capital was withdrawn from new undertakings, and industrial torpor spread over the land.

It may be unfortunate that an administration can do so much to preserve, stimulate, or check prosperity; the fact can not be denied. With the passing of the years the effect of the policy of the national administration on business for good or for ill has become more and more pronounced. Possibly it is not so great as is imagined, but the great mass of business men have come to think that way, and they have come to associate the prosperity and happiness of the millions more and more with the policy and rule of the Republican Party. Consequently with the advent of President Wilson business began to feel untoward effects from the change. President Wilson was not slow to see them, and at once assured the business world that he was not the enemy of business. The business world believed him, because it wished to believe him; unhappily he has acted otherwise, and has continued his declarations of friendliness to business and unfriendliness in action until the business world has lost faith in his professions and promises.

One noteworthy exception may be made. At least he is showing some regard for the railroads, which have suffered so severely from enforced unwise expenditure, too drastic legislation, and singularly inefficient public regulation. In every other regard President Wilson's words of friendliness to business have proved delusive and disheartening. Consequently business has become depressed, a vast body of men are working on short time or out of employment because the administration has shown in no uncertain terms that it is unfriendly to the existing ways and methods of production, exchange, and distribution, with which the people have become familiar and on the continuation of which they believe prosperity depends.

SOCIALISTIC TENDENCY OF THE ADMINISTRATION.

Another charge that must be made against the President and his party is their strong socialistic policy. The true moral and material advance in government, we believe, lies in the other direction. There are those—perhaps many—who think the people would be gainers were the Government to do various things for them—manage the telephones, telegraphs, express companies, railroads, own and operate the coal mines, and the like. To the unthinking it seems as if the public might be the gainer by the public administration of these things; even the briefest account of the method of doing the public business ought to convince one that the truth is on the side of private enterprise.

In the first place, the greater number of Government employees are not the most efficient persons. Those who fill the higher offices and are led to accept them because attracted by honor and the sense of public duty rather than by the pecuniary rewards are usually zealous and efficient servants. Others also, who are interested in special fields of work, especially sociologic, statistic, economic, or scientific, are drawn and kept in the public service and render a satisfactory return. By far the larger number possess only moderate ability and render only a moderate return. Whenever one develops unexpected or unusual ability his public service is brief, for he is soon attracted into private service by the allurement of higher compensation and the hope of promotion. Thus there is retained for conducting the public service for the most part only persons of moderate ability and experience.

How can an efficient and economical public service be expected of such persons? Carlyle's aphorism may be recalled: "Given a set of knaves to produce an honesty of action." The thing can not be done. With men of moderate ability, only poor, disappointing, and expensive telephone, telegraph, or railroad service will be rendered. If we had space, abundant facts could be adduced in proof of the statement. Such a service would be no protection against strikes, for State employees can strike quite as well and hard as others, as the strikes on the French railways have shown. Such a service is no guaranty of permanence of service or fixedness of compensation, for public employees can resign and demand higher rates as easily and as often as others. They are no guaranty that at times of peculiar exigency the public will be more surely served, for experience has shown that they are quite as much inclined to take advantage of such exigencies to make new demands as others. In short, there is not a single reason for assuming that when one enters the public service his conscience or ability in any way is improved by the change.

If these assertions are true, which could be easily verified, they set at naught all hope of improving existing conditions by transferring the service now rendered by individuals to the Government. Nevertheless, the President, who professes to be a very wise man, is showing an increasing tendency to widen the sphere of Government. His approval of a bill to spend $30,000,000 or more on a railroad in Alaska is a sad proof of this tendency. Some of the Senators who voted for it defended themselves by saying they did so to show that the Government could not build and operate a railroad successfully. Thirty million dollars is a huge sum to pay for such a demonstration. Would not the example of the Railway of the West in France, and other public enterprises conducted by the Government, serve as effective examples without such a vast expenditure? If the railroad is needed and will pay, there is abundant private capital and brains to build and conduct it; if it is not needed, the enterprise should not be undertaken simply to make place for Democratic employees and to give contracts to Democratic contractors.

The delusion still persists, notwithstanding its constant exposure, that whatever is obtained from the Government is clear gain—if the Delaware or Mississippi is to be improved, not the dwellers on the borders of these streams pay the bills; if a public building is to be erected in the city, the people elsewhere pay the expense. Somebody must pay, that is a certainty. If the money is borrowed, payment may be postponed but is not escaped. If the charge for carrying a parcel is enough to pay the cost, the Government loses nothing; if the charge is not adequate, the people must pay the deficiency or it must be borne by the railroad companies. Sooner or later the people must pay; and as a public service of almost every kind is higher than a private service of similar quality, it follows that in the end the people lose by having the Government do for them what they can obtain through individuals.

Notwithstanding this, the President is eager to have the Government buy ships and through its servants sail the seas. To-day there are sufficient ships to transport every bushel of wheat that can be spared for foreign markets; there is not the slightest evidence of any dearth of transportation facilities. No producer of wheat is calling on the Government to transport it for him; the idea is simply a part of the President's socialistic policy. Happily, a very considerable part of his own party

balks at this last demand on their intelligence and independence. The only ones who are eager for this latest and wildest scheme are the owners of German ships now lying silent and useless at American wharves. Nevertheless, our presidential lobbyist, while announcing his willingness to cease effort for a season, has also announced his determination to proceed with his measure at the next session of Congress.

THE PRESIDENT'S ATTITUDE TOWARD WORKINGMEN.

Closely related to his socialistic tendencies is the President's conduct toward workingmen. Everyone believes that an association among employees of a corporation is just as natural and proper as united action by the contributors of capital to form the corporation itself. Whatever may be said about the employers of labor in other countries, in our own country employers generally desire to treat their employees fairly. Most of them have risen from the ranks and have not forgotten their early days and associations; and this is especially true of all the larger employers, particularly the corporations.

There is a large body of workingmen—much larger, in the aggregate, than those belonging to labor unions—who, for reasons deemed wise and satisfactory to themselves, remain outside the pale of all labor organizations. One of these reasons is expense. The expenses of management are large, also the amounts lost through unsuccessful strikes. Even if the ends are gained, the cost may have been so great that a long period may elapse before it can be made good. Hence the pecuniary gains of unionism, reckoned for a long period, have not been enough to lead to the abandonment of the individualistic for the collective principle.

The President, however, has clearly shown not a desire to be broad-minded in this great business, not a desire to "play fair," but to exploit labor unions for narrow party advantage. Probably no man sees through this thinly veiled action by the President to curry favor with organized labor to the disadvantage of unorganized labor more clearly than Mr. Gompers. In the end the President and his party will lose by trying to aid one section of the great working class at the sacrifice of the other. In the end this unfair action will be clearly discerned, and the sense of fair play, which, after all, has a firm throne among the American people, will condemn the President and all who follow him in this low business of trying to make partisan capital at the expense of a great body of workingmen. It is true that the workers outside labor organizations have no journals or orators to voice their rights, but most of them are endowed with intelligence enough to discover the President's willingness to sacrifice them for party advantage. The Republican Party stands for fair play, for the treatment of all on the same terms, whether members of labor associations or outside them, of whatever race or color.

OUR FOREIGN DIPLOMACY.

Another charge that may be justly made against the President and his party is the demoralization and disintegration of our Diplomatic and Consular Service. For many years the Republican administration had steadily improved the foreign service. The poorer representatives had been retired, the more efficient had been retained, many promotions had been made, based on efficiency; in short, foreign service based on merit had been established. The people were rejoicing in the hope that this greatly improved service was secure; alas, they knew not the real Wilson and Bryan. Within a few short months most of our foreign representatives, well fitted for their places by long tried experience, have been supplanted, and who now fill their places? A leaf from the South American story may be given. At the close of President Taft's administration everyone who represented us in those countries spoke the language of the country to which he was accredited, and was in every way qualified for his place. What has happened? Everyone of them, with a single exception, has been supplanted by inferior men, editors of Democratic newspapers, without any knowledge whatever of the country to which they have been sent, ignorant of their duties; a worse selection was never made. Col. Harvey, the editor of the North American Review, a zealous promoter of the nomination of Dr. Wilson for President, thus describes the change in the February number of the Review:

> The average experience of the former ministers to these South and Central American Republics was 15¼ years, and their average age at the time of their expulsion was 47. All spoke the language of the countries to which they were accredited. The average age of the new ministers is 54½, five being past 60; no one of them, we believe, understands Spanish, and none, of course, has had diplomatic experience. In other words, 12 trained and capable representatives, several of whom entered the service under competitive examination and all of whom had long since forsaken partisanship, are superceded by mere party hacks, whose ages clearly disqualify them for continuance in office for sufficient time to equip themselves for proper performance of their duties. A clearer case of partisan political debauchery can not be imagined.

What is the meaning of this degeneracy in the Diplomatic Service? As the Secretary of State is an ardent believer in the old-fashioned doctrine to the victor belongs the spoils, he has had the courage to overthrow the civil service and return to the ancient method of dividing the spoils. It is true that before his election Dr. Wilson professed to be an ardent believer in civil service, yet his profession has not squared with his subsequent practice. With an inconsistency which can not be justified, he chose for the head of his Cabinet a man who is the open and shameless enemy of civil service, who has not feared or hesitated to put his belief into practice.

There is no sign that any check has been put on Mr. Bryan by his superior. All the more competent men in his office have been forced out. As a consequence our Diplomatic Service has fallen into sad repute. The garden of diplomacy, so carefully cultivated during the former administration, is now filled with strange specimens. Other nations are examining these curious heads and wondering what has happened. Without question Bryan is the most variegated bloomer the country has ever produced; long may it be before such a rank growth again appears.

The Postal Service has been invaded in several ways. One would have supposed that in adopting the new banking system, in which the absence of party politics is indispensable to its efficient working, President Wilson would have remained true to his profession. But his party, eager to grab all the places possible, in the last days of amending the bill added a clause whereby the appointees to the various positions are kept outside the civil service and within control of Democratic influence. Thus partisan politics is to have its baneful sway in an agency of government whose successful operation requires the best talent and the most disinterested service. The banking machinery should, of all the public agencies, be kept far from partisan politics. Men of the highest character and ability are required to conduct this business successfully, and no other excuse can be made for this invasion of the civil service save the demands of the Democratic politicians. The defenders of the President say that, though a believer in civil service, he must do some things to please his party, and the destruction of the civil service is one of them. To this contention two answers may be given. The President is a man of unusual forcefulness, is always sure that he is right, and insists on having his own way. He is not only the dominating factor of his party, but does control his followers whenever he brings his teeth together. There is no reason for supposing that he could not have his way in these matters as well as in others if he were really intent on preserving the civil service.

The other answer is, if he yields because required by party exigencies, is not this a confession that his party is not worthy of support? The maintenance of our civil service is an essential of efficient government, and any man or party assuming a hostile attitude toward it is not worthy of place or power in our political system.

FINANCE AND ECONOMY.

Besides enacting the tariff measure, President Wilson sought at an early day to improve the banking and monetary system of the country. He knew what ought to be done; he had studied these matters as well as the tariff and was just as ready to force his ideas on Congress with respect to them. So Congress was kept together until a bill embodying the essence of the Wilsonian wisdom was passed. In vain the more thoughtful Members of that body pleaded for delay. In vain they declared it was a great measure, affecting vast interests, and should be carefully considered. The chairman of the House committee, a mere tyro, declared that he and others knew just as much about the business as they would know by longer delay and investigation, and the President displayed his shallowness by sustaining this view.

The great measure that was to improve so quickly our monetary and banking arrangements was passed, and what has happened? As we all know, the President spent several months in selecting members of the Federal Board. He appointed a very questionable official Comptroller of the Currency, who, ex officio, is a member of that board, while those who knew most concerning his business career dared not make their objections known, fearing the consequences. At last the board was completed, and what is speedily discovered? Not a concentrated banking system, whereby the reserves of the banks can be mobilized, which is one of the principal needs of a better system; in truth, the most important thing of all desired by its projectors, but 12 banks, whose separate interests are stronger than the general interest, and consequently weakness is appearing where there should be strength; a clash where harmony should prevail. Very likely the system will be amended; at present and during the immediate future the great assistance expected from its creation is not in sight.

Meanwhile the much-derided Aldrich-Vreeland plan, the creation of the Republicans while forming the congressional majority, is furnishing substantial relief to the country. Without setting up a vast machinery and creating new plans, a way has been provided for furnishing quickly an ample amount of new currency, commanding as much value as the old, and effectively banishing all fears of a monetary stringency. Indeed, this plan, though intended to serve only a temporary purpose, might be amended and perfected and substituted for the Democratic plan as a simpler and more workable scheme, and with less danger of invading business interests and the banking world in the interest of partisan politics.

REPUBLICAN AND DEMOCRATIC RULE COMPARED.

In 1800 the Democratic Party came into power and for 60 years, save with a short 4 years' period, controlled political affairs of the country, and completed its rule by plunging the people into a 4 years' war, whose consequences are still felt by the annual payment of $160,000,000 of pensions, a large public debt, and by sorrowing thousands, whose hopes and joys were crushed by the loss of those who fell in that awful sacrifice.

The Republican Party, from 1861 to 1913, a period of 52 years, excluding the two terms of President Cleveland, have been in power, leaving a record of progress, prosperity, and contentment of which the world knows no parallel. Of this an unanswerable proof is that vast wave of immigration, the millions who during those years of Republican rule have come hither and become a part of our people. While this record of progress and prosperity has not been equal and uniform, the current of newcomers during all those years has always been blowing in this direction. Had those immigrants not known of the greater freedom and opportunity here they would not have come; had false hopes arisen after their arrival they would have returned. The world's El Dorado under Republican rule has been found here, and its preservation is best secured by continuing that party's power. To that end all voters should seek to secure a good working majority of Republicans in both Houses of the next Congress.

The Philippine Islands.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914,

On the bill (H. R. 18459) to declare the purpose of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for the Philippine Islands.

Mr. CLINE. Mr. Speaker, I am unqualifiedly for the bill under consideration. There are many reasons why it is proper to consider it now. I do not believe it is to be termed an "emergency measure." On the other hand, there are no reasons why it may not be considered even with the European war in the foreground. This is distinctively a political problem, made so by the minority contingent when it was in power. It will continue to be a political question because of the two theories of political thought upon this floor. We on this side of the House believe in the doctrine announced by Jefferson, the doctrine of self-government in its largest possible application. You on the other side are examples of Alexander Hamilton. You believe that the great masses of the people are incapable of direct self-government, and through all of your practical applications of civil government run the theory of bureaucracy. We on this side are anxious to express ourselves as to our duty to the subjugated races in the Philippines by direct statement and to extend to them every possible element of autonomy. You on your side refuse to concede to them these functions of government of which they are capable and veil the future to them as to your purposes. We are pursuing in this bill the course of conduct consistent with our theory of government and consistent with our history as a party. The unselfish purpose expressed by those who believe in this bill is to liberate both the Filipino and ourselves from the present environment of the situation. Many considerations move us to the adoption of the bill under consideration. Not only should we look to the well-being of the Filipino, but it is not selfish to provide for our own national safety.

There are broad ethnological facts and social principles elementary in the very existence of races and color that ultimately shape the whole trend of national and race life. We can not change them. They have been recognized in all history and will continue to remain fixed. All we can do and what we should do is to observe these well-intrenched facts and principles of race and color and shape our destinies within the rule. There is a mysterious element in human life that demands equality and resists crushing domination in the application of every system of government or economics, whether it be a highly developed system or not. Representative government is the only sure guaranty of any character that personal liberty and personal rights will be protected. The wholesale intrusion of the individual into the political structure of the State government is an American idea of the construction of civil institutions. A strong centralization of power either in the hands of an usurper or in the government itself can not exist with our theory of popular government. A coordinate branch of the Government invading the constitutional rights and prerogatives of another coordinate branch of a representative government and assuming to discharge its functions with a strong hand can not exist in a true democracy. That the doctrine of the right to control a different people than that participating directly in the Government, either by conquest or purchase, implies a force of arms can not be disputed, and that it is an European and not an American doctrine is also proven. There never has been a conquest of territory except by force of arms, and that conquest rarely maintained except by a force of arms resident in the subjugated territory. Some facts with reference to races and governments are as well settled as any principle in mathematics. Europe will never be overrun by the blacks of southern Asia, nor will the yellow man or the brown man burden the soil of this Republic, either as a citizen or as a subjugator of our personal liberties. The entire trend of thought has turned away from that of colonization and conquest to that of methods of government in which are vested and recognized the rights of the citizens composing the Government. To show the trend of thought in this direction I quote from a speech made by Secretary Root in 1906 on his visit to Rio Janeiro.

No student of our time can fail to see that not America alone, but the whole civilized world is swinging away from its old governmental moorings and intrusting the fate of its civilization to the capacity of the popular masses to govern. By this pathway mankind is to travel whithersoever it leads. Upon the success of this, our great undertaking, the hope of humanity depends.

And I may well add an extract from another speech made on the same visit which has peculiar significance to us in our relation with the Philippines. Secretary ROOT said:

We deem the independence and equal rights of the smallest and weakest member of the family of nations entitled to as much respect as those of the greatest empire; and we deem the observance of that respect the chief guaranty of the weak against the oppression of the strong.

Through some unaccountable source we exercise control over and possession of the Philippine Islands, with practically a total population of 8,000,000—a little more than twice as many people as we had when we denounced England for our own subjugation—these lands, wholly populated by a race different from ours, more than 7,000 miles away, differing in religion and history, in color and civilization, have nothing in common with us except the desire to manage their own affairs and govern themselves as we do ourselves. We have nothing in common with the Filipinos, and never can have, because of race differences that are insurmountable. Projected into the character of the Filipino that has become a constituent part of his nature, and that of all Asiatic races, through centuries of heredity, are differences of religion, civilization, and fundamentals in morals and government. These people are opposed to us in every essential of life, character, and personality; yield to us a suspicious obedience, view us with an increasing aversion, while we proclaim to them and to the world our belief in the essential principles of personal liberty. Development of social life and government have a uniform basis. Mutual dependence is everywhere forced on all classes. All have the same aspirations, the same intellectual aptitude, the same inclinations—the only difference is in degree, and all are the products of natural evolution. We have no announced future policy in the Philippines. The time is ripe to inquire not only for our own safety, but in justice to the residents of the Philippines what our purpose is. One great political party so long in power refuses to answer the call of the brown man when he asks of this enlightened Christian Nation what the destinies of himself and his children are to be in his own land now held from him by a strong, powerful Government. The Republican Party has never given a concrete statement of its attitude on the Philippine problem or informed that struggling people what may be expected from it. I quote

as the last declaration of the party on this subject in the Chicago platform of 1912:

The Philippine policy of the Republican Party has been and is inspired by the belief that our duty toward the Filipino people is a national obligation which should remain entirely free from partisan politics.

A more studious attempt to avoid the whole question could hardly have been made. Since it became a certainty that the Democratic Party would be returned to power every possible agency that could be invoked—political, commercial, or otherwise—has been drafted to create public sentiment against the ability of the Filipino people to administer a more autonomous government. A cabal of interests involving many persons in the civil service in the Philippines have joined in their efforts to prevent legislation that would remove from power the domination of an oligarchial and probably exploiting minority in the archipelago. The press has been filled with letters until recently from people connected with the administration in the Philippines that a mere cursory examination will disclose the product of concerted design. None of these letters give any credit to the Filipino people for their successes in attempting to patriotically and honestly advance the material interests of the country. No credit has been given to the Filipino men and women scattered everywhere throughout the islands, fired by patriotic devotion for the permanent and social uplift of their people. All credit is taken by the administration, and after a complete exposition of the Moro Provinces, in which all of the discreditable conditions imaginable are charged to the Filipino people, these letters express the deep solicitude that the Filipinos shall be given their independence "when they are fitted for it."

But, Mr. Speaker, this discussion has wandered far from the provisions of the bill. Excepting the able discussion by the chairman, no man has pretended to discuss the several provisions contained in it. We have had the same old talk doled out to us as on former occasions when this subject was under consideration, the burden of which has been self-complimentary patriotism. Last Monday we were regaled with hours of discussion predicated upon false premises. No man can hope to compete with the gentleman from Ohio [Mr. FESS] in the acrobatic feats of his imagination. He started out with the unfounded statement that there were 10,000,000 people in the Philippines.

The Census Office says that in 1903 there were 7,600,000; that from 1893 to 1903 the increased average was 40,000 a year. And the estimate of the Census Bureau is that 8,000,000 would include every inhabitant of the Philippines. But what figure does a misstatement of 2,000,000 people make with the gentleman from Ohio when he is discussing the Philippine question? His next assertion was that 85 per cent of the Philippine people were illiterate. No grosser misstatement connected with the Philippine problem has been made in this House in the last five years. I shall have some difficulty to convince myself that they were not made with an evil purpose. Now, what are the facts? In the first place, in determining the degree of literacy a test is universally made by including in the calculation persons of 10 years of age and over. That is universally true, not only in this country but in all others. That purpose did not suit the gentleman from Ohio. He not only included the babies in the mothers' arms, but added 2,000,000 people to the actual number, according to the Census Bureau, that did not exist for the sole purpose of discrediting a struggling and patriotic people in the far-away Pacific. Now, I am going to quote from the message of Acting Gov. Gilbert, of the Philippines, to the legislature, under date of October 12, 1912. I quote from page 2, as follows:

Not in Manila alone but throughout the archipelago may be found earnest and able men devoted to the cause of the people and fired with the highest ambitions for the material, mental, and moral uplift of those about them. No wonder, then, that with limited revenues and conditions untoward in many respects, the results of their labors and ambitions are marked to-day by a condition of well-being and opportunity heretofore unknown in the Philippine Islands.

That is not a statement made with reference to an ignorant, illiterate, and unpatriotic people. Let me quote again from page 4 of the same document:

A general educational system was inaugurated in the beginning. More than half a million children are attending school as these lines are written. For several years the average has been nearly as great, so that we can say that between three and four million students—and by this time 5,000,000 students—have had greater or less advantages in the public schools of the Philippine Islands. Many private schools are also serving the people. Each year adds to the number of those of mature age who have received some school training. In these modern days every civilized country is developing in democracy. Whatever form this government may assume it must be based on the democratic idea of a government by the people.

I make this quotation from an ardent standpat Republican, a capable gentleman, a neighbor and friend of mine for many years. I quote it because it is in striking contrast with the bombast from the gentleman from Ohio on this important subject. I think I better read another paragraph from Gov. Gilbert's message. I quote from page 7, where he is discussing the law making English the language of the court:

I therefore recommend, as earnestly as I may, not that the law be repealed which makes English the language of the court, and thereby postpone the achievement of Philippine desires for more complete naturalization (if I did this I should regard my action as contrary to the desires of the majority of the Filipinos and should proclaim myself as an enemy of Filipino autonomy), but that the law be amended so that all safeguards may be provided, so as to permit the judge or lawyer or litigant to elect whether in the particular case that is to be tried the proceedings or any part thereof shall be conducted in Spanish.

But, Mr. Speaker, I propose to get further into the question of literacy. We took a census of the Philippines in 1903, more than 11 years ago. Of the population 10 years of age and over at that time there were 2,211,443 who could read or write, or both, or 44.5 per cent of that population. Acting Gov. Gilbert in his message to the Philippine Assembly in 1912 said that between three and four million children and adults have had the benefit of English education in the school system of the islands since American occupation. Undoubtedly that number has now reached 5,000,000. In the report of Commissioner of Education Wright for 1913 he states that more than 100,000 boys and young men were engaged in agriculture and gardening. What country can make a better showing? That in the fall of 1913, because of increased revenues set aside by the Governor General for educational purposes, 1,000 new schools throughout the islands would be opened, into which it was expected to admit 100,000 additional pupils. Out of more than 9,000 teachers employed in the public schools in the Philippines more than 8,000 of them are Christian Filipino teachers. What sort of people are the Filipinos who so readily grasp and appreciate the great forces of national growth and material sovereignty that they should meet such a charge of illiteracy and incompetency as has been pronounced by the gentleman from Ohio, Mr. FESS? Not only that. Every province in the islands, more than 80 in number, that corresponds to our counties or municipalities, is governed by Filipino officers elected by the people. Eighty members of the Filipino Legislature are elected by the inhabitants of the islands, and what is more singular, every member is a college-bred representative and lives in the district he represents. I may say in passing, that we held the Filipino's abilities in such high regard that we commissioned him to represent 90,000 people in his legislative capacity. The Congress of the United States was in existence for more than 60 years before a Member of this House represented that number of people.

But, Mr. Speaker, this is not a question of literacy or illiteracy. It is not a question of immediate independence for the Philippine Islands. The problem for us to decide in this bill is the limitation of self-government that we are to permit the Filipino to exercise. Neither is it a question whether we want to extend to him this larger self-government. We have passed beyond that period in our "benevolent assimilation." We can not educate the Filipino to the full understanding of his civil rights as we enjoy them and then refuse to let him exercise them. As has been well said by the gentlemen on this floor, particularly by the leader of the minority, Mr. MANN, "these people must be our friends." They must understand that we are the most patriotic, self-sacrificing, and disinterested friends that they can have on either hemisphere. There loom up in the future, in my opinion, the most serious complications for this Government in the retention of the Philippine Islands. We are compelled by the very force of our location, our history, our political teaching, to bind them to us by the most enduring ties of friendship. Let this be distinctly understood. We can not teach the Filipino his civil and religious rights, teach him that he is capable of managing his domestic affairs, and then refuse to permit him to exercise authority over his own property, assess his people, collect his taxes, construct his public improvements, and educate his children without alienating him from us. If we do not permit them to exercise these functions of government, their capability of which is no longer any question, is it too much to assume that the Filipino people will secretly form an alliance with some great portion of the Malay race that will wrest their sovereignty from us and exercise it themselves?

The vastness of the Pacific Ocean, with its uninhabited islands scattered a thousand miles apart, is too great to aid in spanning the supremacy of our power. Our supremacy in the Eastern Hemisphere will remain safe only when we can have that friendly, equal commercial intercourse with the increasing millions of people that engage in over-seas commerce. I can not close this discussion without incorporating at this time a paragraph from a speech delivered by the Republican leader, Mr. MANN, on this subject on October 1. I quote:

We command the Pacific Ocean to-day with the islands which we possess in the sea, with the land we have on this side, and with the Philippines on the other side. Will we surrender our command? I say, "No; never." [Applause on the Republican side.] If we should let the Philippine Islands go to-day without a string tied to them, they would

belong to some other country inside of 10 years. But if they could keep their independence for 25 or 50 or even 100 years, in the end they would be used against us instead of in our favor in this inevitable conflict between competing races. I am opposed to giving the Philippine Islands independence.

Mr. Speaker, that, in my opinion, is the most astounding proposition that has been presented on the floor of this House since the Civil War. In the 16 years that we have been in the Philippines until that declaration no man, speaking from high official authority, either for himself or for his party, has ever declared it to be the purpose of his party or himself to permanently retain sovereignty over the Philippines. Such a declaration reverses not only the whole history of this Republic, but those principles that we laid deep beneath the structure of American democracy. For more than 150 years it has been the province of this Republic to illustrate to the world one principle—the principle of self-government anchored within the doctrine of personal liberty. In the language of that renowned French publicist, Bagehot, we have "exaggerated the idea." We have given all the prominence that a mighty people could summon. We have filled the public mind, not only of our own land but of all lands, with the theory that we are bound to each other by that cement which flows from an all-engrossing, overwhelming purpose. We have had but one object in view, to which we have given the highest consideration and self-committed devotion. Men with matchless fortitude and unequalled bravery have dared to sacrifice all and do all to perpetuate and exalt the cause of human freedom. It is the ideal toward the perfection of which we have bended every energy and every hope.

We have written across the canopy of our ambitions, "If the American democracy be lifted up, it will draw all nations unto us." This has been our engrossing purpose. But if we are to adopt the constitutional exegesis of the Republican leader we shall tear out of our history the Bill of Rights and repudiate the Declaration of Independence. We are to swap our Constitution of civil and personal liberty for a constitution of colonial subjugation. It never has been and never will be the purpose of this Republic to subjugate alien races on the other side of the globe. In the riot of the imagination of the gentleman from Illinois we are to open and protect our trade in the Far East by the sword. We are to sow to the wind by declaring our purpose to always retain the Philippines under subjection, and reap the whirlwind of our folly in yielding to the greed of commercialism. I do not believe the people will retreat from the vantage ground of destiny they now occupy. I can not persuade myself that the fathers were wrong in their controlling purpose to teach the world that the sovereignty of one people over another people was a violation of every principle of justice.

It is contended that the preamble in which we declare it to be the purpose of this Government to give the Filipino independence ought to be stricken from the bill. The preamble should remain, expressive, without equivocation, of our ultimate purpose to do for the Filipinos as we have promised them to do. We can in no other way so well express our intentions. The Republican side of the Chamber ought to greet this opportunity. Presidents McKinley, Roosevelt, and Taft, leading successively the Republican Party to power, and speaking for it in public addresses, declared it to be the purpose of this party to ultimately grant independence to the Philippines, to give it to them as soon as they were capable of setting up and maintaining a stable government. The Democratic Party can not refuse, now that it is in power, to unreservedly declare in a legal way what it has often declared in its party conventions. In our last four national conventions we have taken a definite stand on the Philippine question. The Filipino expects us to declare our purpose, and he has a right to expect it. Gentlemen say this is no place to make the declaration. We are writing a new organic law under which the inhabitants of the Philippine Islands may rightfully assume that as they shall prove themselves worthy a larger and more complete autonomy will be extended to them. We may well say what we shall do when they shall have proven themselves able to efficiently discharge the important duties that we are now committing to them. To refuse to say now to the Filipino what the future destiny of himself and his children is to be in his own land would not only be to deceive him, but it would be an act of the grossest perfidy. It would take away from him every hope and incentive to a larger realization of complete personal liberty. I want the Filipino to know that a bow of promise to be fulfilled spans his political horizon. I want him to understand that the American people shun fraud and deception on such vital questions as affect the liberty of 8,000,000 of people under our flag who expect us to deal with them as men and not as subjects. I would as soon tear out of the political fabric of our Government the Bill of Rights and the Declaration of Independence as to abandon our promise when we have the power to declare what our purpose is. Let the preamble stand.

The Philippine Islands.

EXTENSION OF REMARKS
OF
HON. FREDERICK H. GILLETT,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914,

On the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands and to provide a more autonomous government for those islands.

Mr. GILLETT. Mr. Speaker, when the appropriation to pay $20,000,000 to Spain for the Philippine Islands came before this House, I introduced a resolution that we should declare, in connection with that appropriation, that when the inhabitants of the Philippines were capable of self-government we would give it to them. I did this not so much out of regard for the Philippines as for the United States. I was opposed to taking them, but I thought that if we were compelled to take them we ought to do as we had done with Cuba, and bind ourselves to free them as soon as it was feasible; and I felt that the only way to assure that was to make the declaration a part of the contract with Spain in purchasing the islands.

Any declaration by Congress now is an empty form, because it does not bind any future Congress, but a declaration at that time as a part of the contract would have been binding.

I was not acting from altruistic motives or for the good of the Philippines so much as for the good of the United States. I believed then—and it seems to me events have justified my belief—that they would be a burden and an expense to us rather than a benefit. I believed also that it was incongruous for a Republic which professes a belief in universal self-government to exercise jurisdiction and absolute power over distant peoples, and that the tendency of such a connection would be to unconsciously diminish our faith in the principle of self-government. So for both material and moral reasons I thought it was wise for us to commit ourselves conclusively to the doctrine that when they were capable of governing themselves, self-government should be granted to them.

I hold the same belief now. I shall vote for the preamble of this bill, and yet I do it without enthusiasm, because I recognize that it has no binding force, that it is introduced as a mere pretense, to indicate that the Democratic Party has not abandoned the principle on which it fought one campaign and which it has asserted in theory, though never in practice, ever since, and that it is a mere expression of our individual opinion and does not have any effective force.

With a recognition of the great advance which has been made in the Philippines in education and appreciation of law and order and of the development of men of high qualities of leadership, I do not believe that they are as yet at all fitted for independence or self-government. I believe that the methods of administration which have been followed so far under Republican auspices have been wise and beneficial and should not now be departed from. I think it is still impossible to predict how soon they ought to have self-government, but that it will not be in the immediate future, and that the agitation of the question is most unfortunate for the islands.

The position which the Democratic Party has taken on that issue has excited hopes and ambitions there which can not be realized and which will give rise to undue disappointment and resentment. This very bill shows the insincerity of Democratic professions. When they were in a minority they proclaimed their eagerness for Philippine independence in such a way as to justify the Filipinos in believing that they would give them speedy self-government. Two years ago, when the Democratic Party controlled this House, but knew that the Republican Senate and President would never allow their projects to be enforced, the same Democratic committee which has reported this bill, which fixes no date and gives no promise of early independence, reported a bill promising independence in eight years, which would be only six years from now. How sincere they were in that action is evidenced by the fact that now, when they are in power and have the responsibility and can do as they please, they abandon that bill, disappoint the expectations which they had aroused, and content themselves with this bill, which simply extends somewhat the self-governing privileges which they already had. That is but a fair specimen of the contrast between Democratic profession and Democratic performance.

I think the steady, if slow, extension of rights of suffrage and government to the Filipinos which has proceeded under the

Republican administrations has been reasonable and wise and has progressed fast enough. I do not believe this bill is wise, and I believe that the administration of the islands of late has been most imprudent and most unfortunate in its results. All accounts which I have received agree that its effect upon the prosperity and development of the islands has been disastrous. An exceedingly intelligent constituent of mine, without any predisposition to either approve or criticize, visited the islands this summer and was most outspoken in his condemnation of the results of the present policy.

Of course, the Filipinos desire independence. Any school children would always like to be rid of the restraint of the wisest and kindest teacher and to be allowed to determine their own discipline. The scholarly leaders among the Filipinos, like their representative here, must, of course, to preserve their popularity and influence, advocate independence, even if the hope of high office and control when independence was achieved did not of itself appeal to their selfish ambitions. But I think successful self-government requires an appreciation of law and order and the subordination of immediate gratification to future advantage, which takes more than one generation to achieve. I think we have advanced quite rapidly enough in giving them the development which comes from the exercise of power and that this bill is not wise or necessary.

I shall vote for the preamble, because I believe that they ought to have independence when they are ready for it, and that is what I understand the preamble to say, although I doubt very much the wisdom of our stating it and perhaps thereby encouraging them to believe that it means a speedy enfranchisement. But I shall vote against the bill itself, because I do not think its provisions are yet called for, nor can I repress a suggestion of the inconsistency which it seems to me exists in the men who are most eagerly advocating this bill on the ground that these people have an inalienable right to self-government when the same men in their own States are absolutely forbidding any participation in suffrage or self-government to a large portion of their fellow citizens because they are of a different race.

Woman Suffrage.

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN,
OF ARIZONA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 13, 1914.

Mr. HAYDEN. Mr. Speaker, that the position of the Democracy of Arizona on the question of woman suffrage may be made known, I desire to print in the RECORD the following extract from the platform adopted by the Democratic Party council at Phoenix on September 30, 1914:

"We congratulate the women of Arizona on the acquirement of equal suffrage, and call attention to the fact that this reform was made possible and brought about through the machinery of popular government established by the Democratic Party.

"We note with approval that the women have registered and generally exercised their right of franchise at the recent primary election. We unqualifiedly indorse the principle and practice of woman suffrage and pledge our candidates for United States Senator and Representative in Congress to vote at all times in favor of national woman suffrage."

The Republican State platform is silent on equal suffrage, but the declaration of principles of the Progressives of Arizona contains this statement:

"We condemn the action of our Representatives in Congress and in the Senate who voted against the national enfranchisement of women."

I am confident that no member of the Progressive Party in Arizona would intentionally do an injustice either to Senator SMITH or myself, and I therefore presume that this language was adopted under a misunderstanding of the facts.

On March 19, 1914, a vote was taken in the Senate on Senate joint resolution No. 1, by Mr. CHAMBERLAIN, of Oregon, proposing an amendment to the Constitution of the United States extending the right of suffrage to women. I quote the following from the CONGRESSIONAL RECORD of that date:

"Mr. ASHURST (when the name of Mr. SMITH of Arizona was called). I desire to announce that my colleague [Mr. SMITH of Arizona] has been called to the Interior Department upon a very important matter in reference to the reclamation act, and therefore he is unavoidably detained from the Senate. * * * I desire further to announce that if present my colleague would vote 'yea.'"

As to my own record as a Representative in Congress, permit me to say that, at a hearing held on January 31, 1913, I addressed the House Committee on Election of President, Vice President, and Representatives in Congress in behalf of H. R. 26950, a bill by Mr. FRENCH, of Idaho, to protect the rights of women citizens of the United States to register and vote for Members of the House of Representatives. On April 21, 1913, I introduced House joint resolution No. 70, proposing an amendment to the Constitution of the United States extending the right of suffrage to women. My resolution is identical in terms with House joint resolution No. 1, by Mr. MONDELL, of Wyoming, which is now pending on the House Calendar. The language of my proposed amendment to the Constitution of the United States is as follows:

"ARTICLE —.

"SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

"SEC. 2. The Congress shall have power, by appropriate legislation, to enforce the provisions of this article."

THE DEMOCRATIC CAUCUS.

The journal of the Democratic caucus held on February 3, 1914, for the purpose of considering House resolution 22, by Mr. RAKER, of California, to create a Committee on Woman Suffrage, shows that I voted against the substitute offered by Mr. HEFLIN, of Alabama, the adoption of which resulted in the defeat of the Raker resolution. In this connection I wish to say that no resolution was offered in the caucus instructing the Democratic Members of the House to vote against woman suffrage. If such a resolution had been adopted, I would have refused to have been bound by it, and would have immediately taken advantage of that provision of the Democratic caucus rules which reads as follows:

"That no Member shall be bound upon questions involving a construction of the Constitution of the United States or upon which he made contrary pledges to his constituents prior to his election, or received contrary instructions by resolutions or platform from his nominating authority."

UNION NOT AFFILIATED WITH ASSOCIATION.

The National American Woman Suffrage Association was organized in 1869 by consolidating the National Woman Suffrage Association and the American Woman Suffrage Association. For over 45 years this association has labored diligently as a nonpartisan organization in behalf of the cause of equal suffrage, with the result that the women of nine States and the Territory of Alaska now possess the right to vote at all elections. The national headquarters are located at 505 Fifth Avenue, New York, and the principal officers of the association at the present time are:

President, Dr. Anna Howard Shaw, Moylan, Pa.
First vice president, Jane Addams, Hull House, Chicago.
Chairman congressional committee, Mrs. Medill McCormick.

The Congressional Union for Woman Suffrage, of which Miss Alice Paul is chairman, was organized in May, 1913. The Congressional Union is not affiliated with the National American Woman Suffrage Association, and the National Association does not approve of the English militant suffragette methods that are employed by this new organization.

CONGRESSIONAL UNION MAKING NO HEADWAY IN WESTERN STATES.

I am sure that the Members of the House will read with interest the following statement, which was recently given to the press by the National American Woman Suffrage Association:

"The anti-Democratic campaign of the Congressional Union's workers in the equal-suffrage States has thus far proven a failure, according to a statement given out at the local headquarters of the National American Woman Suffrage Association yesterday. The union is lining up all the women voters possible against Democratic candidates for Congress in the nine States where women now are entitled to vote. This is because of the attitude of the Democrats in Congress toward the Bristow-Mondell resolution that would enfranchise at one stroke all the women of lawful age in the United States.

"Reports from workers now in the field in seven Western States for the National Association state that for several reasons women everywhere are resenting the efforts of the union's campaigners.

DR. SHAW IN THE FIELD.

"The National Association, with its president, Dr. Anna Howard Shaw, herself in the field, is concentrating its energies at present upon the fight for woman suffrage in Ohio, Missouri,

Nebraska, the Dakotas, Montana, and Nevada. The question will be voted upon in all of these States this fall.

"This is the big work at present of the National Association's leaders, and it is hoped it will result in a Federal amendment that will enfranchise all the women of the United States. Since September 1 Dr. Shaw has been speaking successively in each of the campaign States, devoting 10 days to each.

UNION CAMPAIGN AN OBSTACLE.

"A great present obstacle, however, in Missouri and elsewhere, according to the leaders, also prominent women of Colorado, California, and the other equal-suffrage States, is the anti-Democratic campaign now being conducted in the equal-suffrage States by the Congressional Union for Woman Suffrage. The influence upon the election of the Democratic candidates in those States is reported to be negligible; but in the States across the border, where a nonpartisan votes-for-women campaign is being waged by the State and national forces, the influence is very serious indeed.

"Senator Helen Ring Robinson, of Colorado, writing to Mrs. Medill McCormick, September 20, says:

"Out here we are not disturbed by the Congressional Union's campaign. I mean we Democrats, and I can not think that at this particular time it will have any appreciable influence in the Colorado situation, since suffrage is in no sense an issue with us.

"Discussing the subject more fully with reference to the nonsuffrage States, Senator Robinson wrote Dr. Shaw in a previous letter as follows:

"Since my return to Colorado I have canvassed with some thoroughness the feeling of Democratic women in regard to any possible attempt by any suffrage organization to defeat Democratic candidates for Congress in the equal-suffrage States as a rebuke to the national administration for its stand on the suffrage question. I can find no sentiment in favor of such a move. The only women who declare themselves in favor of administering such a rebuke are Republicans and Progressives. My inquiries among the large class of independent voting women show that these women approve highly of the present national administration and would be loath to do anything to cripple its influence. I believe, therefore, that such attempts would probably prove futile, at least in Colorado

"Advices from Nevada and Montana, where suffrage amendments are now pending, are to the effect that any concerted suffrage propaganda of an anti-Democratic order would inevitably unite the Democratic forces in those States solidly against the suffrage amendments. That would mean their failure in both States. What would it profit the eastern suffragists to defeat a friend of suffrage in an equal-suffrage State—Senator THOMAS, for example—and to lose a star which might otherwise have been added to the suffrage flag?

"I am not theorising on the subject, I am merely telling you why a close contact with facts have convinced me that the best strategy will be for suffrage workers to confine their efforts to the campaign States or to the defeat of certain enemies of suffrage at the primaries in Eastern and Southern States.

"That the logic of Senator Robinson's views has been confirmed by the events in the campaign States is the unanimous report of the National and State leaders in the campaign States. The anti-Democratic propaganda, which, confining itself to suffrage States and Democrats who are suffragists and the best friends of national suffrage in Congress, is vigorously repudiated by the national association. This organization regards it as not only illogical and unjust but short-sighted and inexpedient to the last degree. To win national suffrage, say the national association leaders, there must be, first of all, more equal-suffrage States, so that there may be more representatives in Congress committed to the cause. Therefore nothing can be so important right now as to win the suffrage fight in the States where the question is to be voted upon in November.

"From equal suffrage States also come protests. The Kansas president, who telegraphed Dr. Shaw at once upon arrival of the Congressional Union representatives, was naturally opposed to a partisan propaganda in a State where all political parties and all candidates are pledged to vote for the national suffrage amendment. From California leaders came an appeal to Dr. Shaw that she herself come and speak in that State to refute the impression that suffragists in general had adopted this policy, and to counteract the Congressional Union propaganda. Senator Helen Ring Robinson reiterated her disapproval of the policy by declining to be hostess at a tea announced in honor of the Congressional Union's representatives. Arizona, through her president, also protested."

MAY COURT DEFEAT.

Mrs. Medill McCormick, chairman of the congressional committee of the National American Woman Suffrage Association, has also made the following statement for publication:

"The anti-Democratic propaganda directed against the Democratic candidates in equal-suffrage States, and therefore against the best friends of national suffrage in Congress, of course is vigorously repudiated everywhere by the national association speakers. If we are to win in the campaign States, suffrage must receive the votes of men in those States who are Democrats, Republicans, Progressives, Socialists, Prohibitionists, and all the rest. To antagonize any one party is to court defeat.

"Yet into Missouri, for instance, from just over the border in Kansas, comes a propaganda from the Congressional Union calling for the defeat of Democrats as Democrats in the interests of suffrage, and Missouri, Speaker CLARK'S State, is almost solidly Democratic. Our speakers report that the voters to whom they are appealing are naturally confused and the speakers themselves must stop to explain this abnormal situation instead of devoting themselves to the real and urgent issue—votes for women.

"The thing is dreadful folly, and there is no telling how much harm it may not do the suffrage cause."

About a month ago the National American Woman Suffrage Association gave out the following to show the attitude of that organization:

"NOT IN CONGRESS FIGHT—DR. SHAW MAKES CLEAR POSITION OF NATIONAL SUFFRAGISTS—OPPOSED TO POLICY OF CONGRESSIONAL UNION IN ITS WARFARE UPON DEMOCRATIC MEMBERS.

"On September 13 the Congressional Union announced its policy of sending speakers and organizers to the equal-suffrage States to oppose Democratic candidates for reelection because of the opposition of that party to congressional action on woman suffrage.

"The confusion caused by the conflicting policies of the National American Woman Suffrage Association and the Congressional Union has caused the national association to make public the following telegram received by Dr. Anna Howard Shaw from Mrs. Cora G. Lewis, member of the Kansas board of administration, to emphasize the fact that the Congressional Union has no connection with the National American Woman Suffrage Association. Kansas has been an equal-suffrage State since 1912.

"TOPEKA, KANS., *September 22, 1914.*

"Dr. ANNA HOWARD SHAW,
"National Suffrage Headquarters:

"Do you indorse Woman's Congressional Union sending women to Kansas to work against Democratic Party? Every Democratic candidate for Congress and Senate pledged to national suffrage. State platform demands it. Present Democrat governor loyal. Has appointed 25 women officials superintendents institutions and State boards. Women here creating bitter feeling are Miss Trax and Mrs. Latimer, who made partisan speeches with Roosevelt. Said they represented national suffrage organization. Answer immediately, my expense.

"CORA G. LEWIS,
"Member Kansas Board Administration.

"Dr. Shaw sent the following reply:

"SEPTEMBER 23, 1914.

"CORA G. LEWIS, *Topeka, Kans.:*

"National association does not indorse the Congressional Union's plan of working against Democratic Party. The Congressional Union is not a member of the national association and has no connection with it. The national association is strictly nonpartisan and opposed to working against Democrats or members of any other party as such. You can not state too strongly that I, as well as other national officers, oppose policy of Congressional Union. Mrs. Latimer and Miss Trax do not represent National Suffrage Association.

"ANNA HOWARD SHAW."

"POLITICAL TREASON AND A MORAL CRIME."

The situation in California is illustrated by a telegram sent on October 1 by Mrs. A. Caminetti to Dr. Anna Howard Shaw:

"Dr. ANNA SHAW, *Elko, Nev.:*

"Our mutual friend, Kate Waller Barrett, located you for me. California State Democratic central committee invites you to defend Democrats against unfair attack of Congressional Union. Our California Democrats championed suffrage years in advance of other parties. Will you honor us by going? Answer, my expense.

"Mrs. A. CAMINETTI."

Mrs. Caminetti received the following reply on October 3, 1914:

"Mrs. A. CAMINETTI,
"Care Suffrage Headquarters, Munsey Building,
"Washington, D. C.

"The Congressional Union is in no way connected with the National Suffrage Association, which greatly deplores their misguided attacks on Democratic friends of suffrage. Personally I consider their attacks political treason and a moral crime. My pledged engagements in campaign States prevent me from taking the field to defend loyal Democrats, for whose aid we are deeply grateful.

"ANNA H. SHAW."

Mrs. Eugene Brady O'Neill, of Phoenix, Ariz., a member of the Arizona Equal Suffrage Central Committee that conducted the successful campaign for woman suffrage in my State in 1912, recently sent the following telegram to Dr. Anna Howard Shaw, addressed to the National Suffrage Headquarters, Washington, D. C.:

"Do you indorse Woman's Congressional Union sending women to Arizona to work against Democratic Party? Senator SMITH and Congressman HAYDEN, who seek reelection, pledged to national suffrage. State platform indorses same. Miss Pincus represents Congressional Union here. Is this organization part of the Suffrage Association?"

On October 9, 1914, Mrs. O'Neill received a reply signed by Mrs. Medill McCormick, chairman of the congressional committee of the National Woman Suffrage Association, which is as follows:

"Have forwarded your telegram to Miss Shaw. Miss Shaw does not indorse policy of Congressional Union. The National American Woman Suffrage Association does not attack any political party. The Senators and Congressman from Arizona stood by our national amendment splendidly, and we are appreciative and grateful for all they did."

ARIZONA EDITORIAL COMMENT.

I also desire to print the following extracts from editorials that have lately appeared in some of the leading newspapers of Arizona relative to the anti-Democratic campaign that is now being conducted in Arizona by representatives of the Congressional Union for Woman Suffrage:

[From the Douglas Daily International.]

WOMAN SUFFRAGISTS ARRIVE IN PHOENIX.

The Congressional Union for Woman Suffrage, of Washington, D. C., has sent a delegation of field workers to Phoenix, where headquarters are to be opened for the purpose of influencing the women of Arizona to vote against Senator MARK SMITH and Congressman CARL HAYDEN, because the Democrats at Washington have refused to pass the national woman suffrage constitutional amendment. It is not likely that the women of Arizona will heed the call from the women who have been sent into this State on this political mission.

Suppose, for the sake of argument, that these two Democrats were defeated, would that be any guaranty that the woman suffragist amendment would be any nearer passage than it was when the matter came up in Washington during the present year?

This paper believes that the women of Arizona appreciate what has been done for them by the Democrats in the matter of granting them the ballot in Arizona, and we believe that they also appreciate the fact that in nearly every county this year the name of a woman appears on the Democratic tickets for office.

—

[From the Bisbee Daily Review.]

WOMAN SUFFRAGE POLITICS.

The American public is rather inclined to the notion that women, like hereditary monarchs, should be superior to partisan politics. It may be a foolish prejudice; and yet the fact is obvious that the astonishing progress made by the suffrage movement thus far has been accomplished by ignoring party lines and appealing to basic principles of citizenship.

Recently the suffrage leaders have shown a marked disposition to "play politics" in their campaign for nation-wide suffrage. Their latest move is to declare war on the Democratic Congressmen of the nine suffrage States because the national Democratic Party will not champion their plan for a suffrage amendment to the Federal Constitution.

Whether or not the 13 Democratic Congressmen whose seats are threatened by the women deserve reelection, their fitness had better be determined on other grounds.

Many sincere friends of woman suffrage are grieved to see the leaders deliberately antagonizing any party. They can gain nothing by such action, and may set the cause back for years.

—

[From the Mesa Daily Tribune.]

AGITATION WITHOUT CAUSE.

Arizona women have the ballot and know how to use it; the women in charge of the campaign against the State's faithful representatives do not have the privilege of voting at their own homes. Is it due to such tactics as these that this right has been denied them? It would be well for them to go back home and get their own house in order before endeavoring to create strife where none should be.

There is no logic in the union's grievance, but it will be extremely interesting to watch the methods it employs. It will be hard to weave a fabric of argument out of what these women have at hand. Maybe they can have more influence with Arizonians than they are able to exert at home, but the chances are rather slim.

[From the Yuma Morning Sun.]

MISTAKEN WOMEN.

While it is easy to see that not much is to be gained by such a movement as this, the loss may be serious enough to check the whole suffrage enterprise for years to come. Thus far the women have made rapid progress by courting the favor of both of the great parties. To antagonize one of these organizations in the nine States in which women now have the ballot is to make sure of the hostility of that party in all the other States in which the issue is yet to be decided.

[From the Arizona Gazette.]

AS TO NATIONAL SUFFRAGE.

Readers of the Gazette need no announcement of the fact that it is a believer in woman suffrage. Believing in woman suffrage for the State, it naturally believes in national suffrage, and is willing to do all in its power to bring it about.

It does not believe that it is the paramount question, though, before the American people. Important as it is, there are other questions which affect the welfare of the whole people far more than whether the women of the entire country shall vote. The voters of the country placed a Democrat in the Chief Executive's chair and elected a majority of the Members of both branches of Congress to look after these affairs. Very many of them were incorporated in the platform of the party, and Members of Congress as well as others connected with the administration are faithfully carrying out the pledges made to the people in reference to them.

The Gazette believes in the present administration and certainly gives its freest and fullest support to it, regardless of any convictions its members may have on this or any other subject which does not strictly come within the purview of a discharge of a political duty.

Senator SMITH and Representative HAYDEN have discharged all obligations they have owed to the party, as they have come up, and have never overlooked an opportunity to perform a service for the State, and however voters may differ from them on one or two subjects, they owe them an obligation for the discharge of duty well performed, which entitles them to a reelection.

Defense of National Capital.

EXTENSION OF REMARKS

OF

HON. EDWIN S. UNDERHILL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. UNDERHILL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the speech of Hon. DANIEL J. GRIFFIN, representing Gov. Martin H. Glynn, of New York, at the unveiling of a monument at Battle Ground National Cemetery, Washington, D. C., September 19, 1914, to the members of the Twenty-fifth New York Volunteer Cavalry who lost their lives July 11, 1864, at Fort Stevens, in defense of the Nation's Capital.

The speech is as follows:

"Mr. Chairman, Defenders of the Flag, Ladies and Gentlemen: To-day within the shadow of the Capitol, in peace and prosperity, we have assembled to render a grateful tribute to the heroic conduct and the patriotic sacrifices of those soldiers of the Twenty-fifth New York Volunteer Cavalry who lost their lives July 11, 1864.

"These sacred precincts have been hallowed by the heroism and the blood of those dashing cavalrymen who gave up their lives in defense of the Nation's Capital.

"Their supreme act of immolation is characteristic of the spirit that animates the volunteer soldier of America. He loves his country, its flag, and its free institutions. To perpetuate them, he is ever ready to sacrifice his life. With such a spirit existing and known from one end of the civilized world to the other, the peace and tranquillity of the American people are assured.

"A half a century has rolled by since those brave New York lads went gallantly to their death. No scars remain from that

fratricidal strife. North, South, East, and West are united inseparably under the starry emblem of freedom and humanity.

"The people of a united North and South have assembled here this afternoon at the Battle Ground National Cemetery to honor those New York martyrs, whose blood cemented the Union of States.

"Representing his excellency, the Hon. Martin H. Glynn, governor of the State of New York, it is my privilege to present to the United States this monument of enduring granite—New York's tribute to the valor, patriotism, and the self-sacrifice of her sons who died in defense of the Nation's Capital."

Sundry Political Subjects—What Has Watchful Waiting Won—The Panama Tolls Surrender—The Glass Currency Bill—The Surrender to the Trusts—The President and the Congress.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914.

Mr. MONDELL. Mr. Speaker, the Democratic textbook for 1914, issued a short time ago, carries on the front cover in large letters the following inscription:

"War in the East." "Peace in the West." "Thank God for Wilson."

This cryptic inscription will, as no doubt was expected, be variously interpreted. The interpretation which most naturally comes to one's mind is that we are expected to give thanks because President Wilson has not involved this country in the European war.

President Wilson is a Christian gentleman of high character and patriotic motives, even as other American Presidents have been, and I have some doubts whether the President, had he been consulted about the matter, would have entirely approved the assumption that, overlooking what an all-wise Providence has had to do with the matter, he is entitled to the credit for our not being embroiled in the unhappy conflict on the other side of the ocean.

The President is a man of judgment and discretion, as men called to the high office of Chief Executive of this great Nation are wont to be; and I have no doubt he realizes as fully as do his countrymen, other than the writer of this Democratic bible, that isolated and separated as we are from this awful conflict, friends and well-wishers as we are of the nations involved; sympathizing as we do with the millions—soldiers and civilians, men, women, and little children—who must suffer from its horrors, it is unthinkable that an American administration, whoever might be at the head of it, would assume the questionable attitude or perform the hostile acts which alone could even raise the question of our becoming involved in this great and calamitous war.

The President very properly admonished our people, in harmony with our inclination, of our duty to maintain an attitude of unprejudiced neutrality individually as well as nationally. So long as we maintain such an attitude, there is not the slightest reason, there is no possible excuse, for our becoming involved in this European conflict.

Following the advice of Washington, we have, through all the years, kept free from foreign alliances, and the wisdom of that policy was never so clearly apparent as at this day. The only danger to our peace lies in some action, legislative or administrative, which would call our neutrality into question. The only suggestions or proposals liable to thus involve us have come from the administration or the administration's side of Congress.

Happily the ship-registry act has not, so far, seriously disturbed our foreign relations, though the attempted transfer to American registry of the ship *Robert Dollar* revealed the dangers to which we are exposed by that legislation.

The ship-purchase act, recently pressed with such vigor by the administration, has fortunately, for the time at least, been abandoned, and thus a very serious menace to our peace averted. I cheerfully award their share of credit for this fortunate escape from threatened complications to those Democrats who labored to dissuade the administration from insisting that Congress approve this questionable enterprise.

We have not questioned, and do not question, the patriotism of the administration or its desire to keep the ship of state upon a safe course. We realize, as all thinking people must, that only the most reckless and criminally careless navigation could divert us from the clear, calm, and well-charted course of safe neutrality which our position among the nations and our wise national policies have secured for us.

If there were any cause for solicitude, it would arise out of the fact that the only proposals or departures from a course of neutrality and security have been at the instance or with the approval of the administration. We are not at war, because there is no conceivable reason why we should be, because an all-wise Providence and great good fortune have placed an ocean between us and the scenes of conflict, because our forefathers in their wisdom bade us keep free from entangling alliances, because our people love and desire peace.

THE MEXICAN SITUATION.

It is possible that I have not correctly interpreted the inscription which is my text. Perhaps the Democratic textbook writer had in mind Mexico rather than Europe when he bade us give thanks for "peace in the West," not to Providence, but to the President. This textbook was written some little time ago. Just at that time Mexicans of one breed and another were not taking pot shots at our citizens and soldiers on the border, and the governor of Arizona had not called out the militia; that has occurred since. The thunders of the siege guns in Europe for the time drowned the rattle of the rifles in Mexico. But then as now we had a great fleet in the Gulf, 7,000 sailors and marines at Vera Cruz, 15,000 armed men on the border, and were holding 4,000 interned Mexicans prisoners of war in Texas.

All of this reminds me that the Democratic textbook assures us at great length that "watchful waiting has won," as do also numerous buttons, which, by the way, are less numerous than they were. The watchword of the hour in our relations with Europe is neutrality. It is approved by all. What a contrast it presents to the attitude of the administration in the affairs of Mexico. "Watchful waiting" is a misnomer as applied to that attitude. The administration did watch—it had no end of superserviceable and intermeddling watchers, official and unofficial—but the waiting was brief and soon developed into active, eager partisan support of one of the factions in the contest.

NORTHERN VERSUS CENTRAL MEXICO.

Throughout all northern Mexico, controlled and overrun by pillaging armies, or bandit bands of so-called constitutionalists, our citizens and other foreigners whose protection we had assumed were pillaged and plundered, their homes and their properties looted and raided, they suffered untold indignities, humiliation, torture, and in some cases death at the hand of these rebel forces. An attitude of strict neutrality would have enabled us to put a stop to these outrages without intervention, but our attitude of partisanship, the removal of the embargo on the importation of arms, tied our hands, and our protests to Villa, Carranza, and Obregon were superciliously ignored or answered with insolent evasion or studied insult.

In central and southern Mexico, under the control of the federal Government, every effort was made by the authorities, and, in the main, with remarkable success, to protect the persons and property of American and other foreigners. But one day a boatload of marines landed at a wharf at Tampico, the use of which had been forbidden because it was in the line of fire of rebel forces besieging the town. A subordinate Mexican officer, whose duty it was to enforce the order prohibiting the use of the pier, took the landing party into custody. Within the hour a superior officer released the party with explanations and apologies. The Mexican Federal Government at once expressed regrets and offered the salute of 5 guns, usual in cases of unintentional offense, but declined a salute of 21 guns, on the ground that such a salute under the circumstances would be an admission of an intentional affront, which could not be admitted because not intended.

FIVE OR TWENTY-ONE GUNS.

The administration's insistence upon 21 rather than 5 guns has sad and solemn emphasis in 19 graves in various parts of the country in which lie the bodies of the gallant American youths who fell at Vera Cruz. It cost the lives of over 300 Mexican citizens and soldiers. Let us not forget that these were not the people or the forces that had been looting and outraging our people in northern Mexico, but their enemies in arms and their opponents in sympathy. Let it be remembered no American citizen or other foreigner had suffered in his person or property at the hands of Mexican federal forces or in the region they controlled.

A. B. C. CONFERENCE.

The conference at Niagara Falls, sought by us, followed the taking of Vera Cruz. We were ably represented there, as was the Mexican Federal Government. The mediators decided, and our representatives agreed, that we were not entitled to and would not claim a war indemnity or other satisfaction for what occurred. In the face of this official announcement by mediators we had suggested and representatives the administration had appointed, is it unreasonable to suggest that those 18 valuable young lives might have been saved and that the eight or ten millions of dollars which were spent would come handy just now, when new and burdensome taxes are proposed. Villa and Carranza scoffed at and ridiculed the A. B. C. conference, were not parties to it, are not bound by its decisions, and the administration's announced intention to evacuate Vera Cruz halts because Carranza declines to promise to protect either the lives or the property of his own people or of foreigners. And Carranza, let it be remembered, is a so-called Constitutionalist we helped into power. It seems that he can not even be bribed into common decency by the million and a half of collected revenue it is proposed to turn over to him.

I realize that different people take different views of things. To me the country's honor is as much involved and offended by an indignity or outrage to the humblest citizen in apron or overalls as to a man wearing the uniform. To my mind our dignity, the respect due our flag, was infinitely more vitally assailed in the humiliations and violence visited upon American citizens, settlers, miners, men, women, and children in northern Mexico than by the temporary restraint of a few American marines at Tampico, during which not a button was lost and, so far as we know, not a uniform or a temper was ruffled.

WHY WE ARE NOT AT WAR.

We have not been at war in northern Mexico because no insult or indignity offered to our flag or our citizens, no matter how flagrant, coming from the constitutionalists or their partisans could disturb our serenity. We are not at war with all Mexico, because when we took Vera Cruz, to weaken the Federal Mexican Government, that Government no longer had the strength to fight, and because as our armed invasion was at the time to the advantage to the constitutionalists it was not resented by them. Mexico is clearly not Belgium.

Our abandonment of a policy of neutrality in Mexico did eliminate Huerta. There is no doubt about that. That much was accomplished, and by the same token we became responsible for Villa and Carranza. Our espousal of the cause of these worthies was, we are assured, based on our love and championship of constitutional government. Behold the outcome. Nowhere in Mexico, from the Rio Grande to the Isthmus of Tehuantepec, is there any government which even lays claim to being constitutional. The whole of that great and fair land is in a state of chaos or in the grip of military despotism—Villa in the north, Carranza in the center, Zapata in the south vie with each other in their forced levies on the property of native and foreigner alike, in the murderous activities of their firing squads. Fortunately, perhaps, the stories of torture, indignity, and outrage of men and women, priests and nuns, of forced levies on and use of property, of organized blackmail, the daily roll of military murders, is crowded out of the papers or into obscure corners by the awful cataclysm in Europe.

CHAOS AND DESPOTISM.

Nevertheless we get news enough to remind us of the frightful reign of chaos and despotism which hold sway throughout the land. All now realize what I predicted more than a month ago on this floor, that there will either be an amicable allotment of spheres of plunder and domination among the military chieftains or, failing to agree on the populations and the areas which each may pillage and exploit, there will be incessant or frequently recurring warfare between them as each seeks to exterminate the other. Poor unhappy Mexico, our hearts go out to her and to her people. As for our own people we find it difficult to speak with patience or in phrases polite or parliamentary as we think of the wrongs they and those of other nationalities whom, under the Monroe doctrine we assumed to protect, have suffered. And these wrongs, these sufferings, have, let us not forget, befallen almost entirely in the regions controlled by the so-called constitutionalists, practically none in the region or through the forces under the control of the Huerta or Federal Government.

WHO IS RESPONSIBLE?

The author of the Democratic textbook points with apparent pride to the conditions in Mexico; takes credit for it to the administration, points to it boastingly as what "watchful waiting" has won. I am a better friend of the administration than he is. I decline to charge, much less to accept the charge, that the administration is responsible for all the horrors in Mexico; for the pillaging and the plundering, for the confiscations, for the outrages to person and property, for the daily military murders, for the awful reign of crime and chaos. My sincere and profound regret is that the administration is so considerably responsible that its official spokesman, the writer of the campaign textbook, makes the administration responsible for it all.

THE PANAMA TOLLS SURRENDER.

The last Democratic national platform declared in favor of the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. The Democratic presidential candidate, now President of the United States, assured the voters of the country that his party's platform was not "molasses to catch flies," but a statement of promises to be fulfilled. During the campaign Mr. Wilson emphasized this plank of the platform, approved it, and asked for support for his party on account of the benefits which he said it would bring. Mr. Bryan, now Secretary of State, eloquently proclaimed how criminal it would be for a party to violate its platform pledges.

At the very time the Democratic national convention made the declaration to which I have referred Congress was considering a bill for the operation and maintenance of the Panama Canal which contained a provision in regard to canal tolls, and before the declarations and appeals of candidate Wilson to which I have referred were made free tolls had been practically agreed upon, and August 24, 1912, President Taft signed the Panama Canal act, with a provision as follows:

No tolls shall be levied on vessels engaged in the coastwise trade of the United States.

I voted against the exemption of American coastwise ships from the payment of tolls, and in so doing I was duly and properly belabored by the Democratic press, which just at that moment was supporting the Democratic platform. I opposed this exemption because I did not believe it to be a sound economic policy or necessary to grant this concession to ships between our two coasts, which have no competition except among themselves. My opinion was that if any American ships were given this preference it should be ships in our foreign trade, which must compete with all the world.

I did not change my views with regard to the matter, viewed from its economic aspects, and I was therefore somewhat gratified to hear along last spring that the President was inclined to view the remission of tolls as a mistake. I was prepared, therefore, as were others who took the same view, to support the President should he recommend the repeal of the free-tolls provision as a matter of policy, though I doubted if he would ever do it, in view of the party declaration.

On the 5th day of March, 1914, came the President's message recommending the repeal of the clause giving American coastwise ships free passage through the canal. The message came like a thunderbolt; not for what it recommended, that had been expected, but for the extraordinary reasons which the President gave, reasons which immediately changed the question from one of domestic policy to one of national right and honor.

ENGLAND'S PROTEST.

It was known that England had protested against the exemption. The President gave out the impression that other nations had also, but it has been proven that such was not the fact. The President asked Congress to amend the law on the ground that our right to favor our own ships had been challenged, and that "right or wrong" we should surrender our position "without question." And particularly he asked Congress to do this "ungrudgingly" as a favor to him on account of matters of "nearer consequence and greater moment" having to do with our foreign relations. This latter, it was assumed, referred to Mexico and the Mexican situation, as at that time there were no other foreign questions pending.

The story how, under whip and spur, against the protest of powerful Democratic leaders in the House and Senate, by the use of all the powers of patronage and persuasion and through the medium of a binding party caucus the President finally compelled his unwilling party to bend to his will is too new to need review in detail. No such dragooning of the representatives of the people by a President has occurred in the memory of living man, but in spite of angry and indignant protests the surrender was accomplished and party and platform pledges repudiated.

To require coastwise ships to pay tolls is, in my opinion, economically sound, but the reasons and arguments made for repeal were such that, as the President himself admitted, the economic questions involved were entirely overshadowed by the larger questions as to our right to control our own canal and as to whether we should surrender our sound views on the subject "without question" on the demand of a foreign power.

The arguments made and reasons given for repeal of the tolls provision place us in position where we never can favor either our coastwise or our over-seas commerce in the use of the canal. What a blessing it would be if at this time, when a great European war affords us an opportunity and we are passing questionable legislation to increase our foreign trade, if we were free to grant our ships engaged in commerce between our seaboard and the coasts of South and Central America favorable tolls through the canal. I have always believed that it was our foreign and not our coastwise trade that was entitled to this advantage. But having repealed the coastwise provision on the claim of the President and his advisers and supporters that we have no right under our treaty to give preference to our own ships, we are now barred from giving preference to those ships that really need it in competition in foreign trade with the ships of Great Britain and other nations.

OUR RIGHT TO PASS WARSHIPS AND FORTIFY CANAL INVOLVED.

But this surrender and foreclosure of our rights in the matter of tolls is the more serious because the same treaty interpretation, the same line of reasoning, which questions or denies our right to give any or all our ships preferential treatment in the use of the canal embarrasses, prejudices, and limits our control over the canal in other respects. It involves the question of our right to pass our warships through the canal without payment of tolls. More important still, it brings into question our right to fortify the canal, our right to protect it under certain contingencies. In other words, unless we now interpret the treaty in one way respecting our right to grant our ships preferential tolls and another way with regard to our warships and our right to fortify we shall find our control over the canal seriously jeopardized and endangered.

GIVING COLOMBIA RIGHTS WE DENY OURSELVES.

A curious sidelight on the present Democratic position is afforded by the fact that while the President was proclaiming and his party carrying out his theory that we were without authority to grant preferential terms in the use of the canal, which we built and paid for, to our own ships the administration was negotiating and later presented to the Senate for ratification a treaty with Colombia apologizing for building the canal, giving her $25,000,000 for our having done so, and giving her free passage through the canal for her war vessels and her merchant fleet. It is no credit to the administration that the storm of protest which greeted this treaty from all over the country led to its being temporarily withdrawn.

Lack of time prevents me from quoting the withering sarcasm, the impassioned eloquence, and the bitter denunciation with which Democrats, including the gentleman from Alabama [Mr. UNDERWOOD], the gentleman from New York [Mr. FITZGERALD], and the gentleman from Missouri, the Speaker of the House, as well as many members of the President's party in the Senate, characterized the surrender of our treaty rights in the Panama Canal. It is significant that in the elections which have occurred since the passage of the repeal bill those who have attempted to defend it have fared badly at the hands of the people. Our people do not desire to do anything we do not have a right to do under our treaty, but the people believe we have a right to control the canal, that we have not surrendered that right by our treaty with Great Britain, and that we should not surrender our valuable rights as owner and builder of the canal "without question" at the demand or request of a foreign power whose shipping trade will be greatly benefited by our surrender.

THE GLASS CURRENCY AND BANKING ACT.

The national banking act and the system which has developed under it is one of the best illustrations we have of the constructive capacity of the Republican Party. It was born of the exigencies of the Civil War and of the necessity of providing a sound banking and currency system to take the place of the wildcat State bank system of the Democratic Party. It met with the abusive and determined opposition of Democrats for many years, but it stood the test of time, gave the people a safe and sound currency, and sustained the public credit. It grew and expanded and met the multiplying necessities of the most marvelous and fundamentally sound national growth, development, and expansion that the world has ever seen.

As the years passed, however, it became clear that the system required new features for its proper expansion and machinery for the efficient coordination of its units. During the past 10 years as a result of much study and discussion public sentiment gradually crystallized as to the essential features of the enlargements and the additions to the national banking act, which were necessary. In May, 1908, Congress passed the Vreeland-Aldrich emergency currency act, a measure intended to carry us safely over any temporary emergency which might arise until Congress could provide permanently for such amendments and extensions of the national banking act as might be deemed necessary and advisable. As a preparation for such permanent legislation the Vreeland-Aldrich Act provided for the creation of a national monetary commission.

This commission appointed by President Taft investigated banking and currency systems and conditions at home and abroad, published many volumes of great value and interest, and submitted their recommendations in the form of proposed legislation. The change of administration prevented legislation on the subject until the matter was taken up by Congress at the special session last year. The Glass currency and banking bill, as the measure enlarging the scope of the national banking act was called, was based primarily on the report of the Monetary Commission, though the plan adopted varied from that of the commission, in detail at least, in many particulars. Some of the modifications of the Monetary Commission plan were probably improvements, but many of them and their details were faulty, obscure, and dangerous in the extreme, as was evidenced by the greatly modified form in which the bill became a law.

There was much speculation when the Glass bill was first reported as to its authorship, which I referred to in a speech delivered while the bill was under consideration.

Quite recently—that is, on August 31—this question of authorship was cleared up by the gentleman from Iowa [Mr. GOOD]. I was discussing the Alaska coal bill and calling attention to the habit that our Democratic friends have fallen into of having their bills written for them by the Government departments. Interrupting me, the gentleman from Iowa said:

Mr. GOOD. I want to ask the gentleman from Wyoming if he is sure that all of these bills have been drawn by some department head or chief? The record discloses, so far as the currency bill was concerned, the bill was drawn by H. Parker Willis, of Wall Street, and that this Congress has paid him $4,814.50 for his services, and I want to ask the gentleman if he has any assurance that there will not be other bills which will come to Congress from the heads of departments with such bills for drafting?

A NONPARTISAN QUESTION.

It is difficult to imagine any legislative question more nonpartisan in its character than the currency question. It is one of the great questions as to the details of which at least divisions of opinion do not run along party lines, and yet following the practice which they had adopted immediately on coming into power the Democratic majority in the House of Representatives proceeded to treat it as a partisan question in committee, and later to enforce the committee mandate on the Democratic Members by a binding caucus rule. The echoes of that stormy caucus still linger in the Democratic primaries in a number of States when the administration forces fought strenuously, but without success I am told, to punish certain Democrats who declined to be run over roughshod in the caucus and rebelled under the party lash.

The Democratic majority were, however, finally whipped into line, and under the caucus rule not an amendment was allowed to be made to the bill, except such as were prepared by the little coterie of gentlemen who were officiating as ringmasters. The gentlemen who were in charge of the bill, secure in their mastery of their caucus-bound brethren, were resentful of the criticisms aimed at the bill from the Republican side and rejected most of the amendments offered; a notable exception was an amendment offered from the Republican side to protect and sustain the gold standard and the gold reserves. This vital amendment was reluctantly adopted, but in the main amendments were bowled over, no matter how clear their value and their virtue was proven, and they passed their bill through the House, declaring it to be perfect. In the Senate the bill was amended in numerous and important respects, and the Democrats in the House were finally compelled to accept in the conference report many of the amendments they rejected when the bill was before the House. The currency law, with all its faults, is therefore a much better piece of legislation than the bill which passed the House.

DEMOCRATS IN EMERGENCY TURN TO REPUBLICAN LEGISLATION.

It is a curious commentary on this much-vaunted currency law that eight months after it was placed on the statute books it was not yet in working condition, and to meet the severe strain put upon our financial and banking institutions by the European war our Democratic friends found it necessary to have recourse to and take advantage of the Vreeland-Aldrich Act. Under this Republican legislation, which when it was enacted was viciously denounced by Democrats, a Democratic administration has issued three hundred millions of emergency currency which is enabling our country to withstand the suspension of gold payments by the leading nations of the world and the dumping on our markets of hundreds of millions of dollars of American securities. Thus has a Democratic administration been compelled to acknowledge the failure of its much-vaunted currency

bill to meet a critical situation and the virtue of Republican legislation in saving the credit of the country.

We all hope that the new currency law when put into effect will prove workable and successful. As it passed the House it was impossible as a working system. As amended by the Senate, under Republican hammering and largely by Republican votes, it is to be hoped it will work satisfactorily, at least until it can be amended by a Republican Congress.

ORGANIZATION BOARD.

The fundamental defects of the Glass currency bill lie largely in the political and partisan character of the organization it provides and the vast power over our national banking and credits it places in the hands of a partisan reserve board. The partisan plan and purpose of the legislation was fully illustrated by the acts of the partisan organization board appointed to organize the system. In the selection of reserve cities and the mapping of reserve districts there was every evidence of the prostitution of our banking and credit interests to partisan and personal ends. The plain intent of the law was violated in ignoring the natural course of business in the selection of reserve cities and fixing the boundaries of reserve districts. Complaints arising from many localities were ignored, or, if a hearing was given to complaints, as in the case of my own State, our people were in effect told they did not know what was good for them.

EXTREME PARTISANSHIP.

When it came to the selection of the membership of the Federal Reserve Board the partisanship and favoritism which marked the passage of the legislation through the House and the acts of the organization board were further exhibited. The first selections made for this important board were all Democrats, and, incredible as it may seem, had the President's nominees been confirmed by the Senate the probability is that this board, with its enormous powers and influence over the banks and the credits of the country, would all have been of the President's party. Among those nominated by the President for membership on the reserve board were Paul M. Warburg, a member of a great New York and international banking firm. Mr. Warburg's appointment was confirmed by the Senate, and no doubt properly. I only mention him to suggest that had a Republican President nominated a member of a great Wall Street banking house to a position of this kind every demagogue in the Democratic ranks would have howled himself hoarse about it. The President was not so fortunate, however, with one of his nominees, Thomas Jones, officer of the International Harvester Co., otherwise known as the Harvester Trust, an organization recently convicted by a Federal court as an unlawful combination in restraint of trade.

THE HARVESTER-TRUST APPOINTEE.

In connection with Mr. Jones's nomination the President took the most unusual step of writing a letter vouching for him and explaining that Mr. Jones had gone upon the board of the Harvester Trust as a reformer to assist it in mending its ways. When, however, a Senate committee interrogated Mr. Jones, he refused to pose as a reformer, declared he became a member of the governing board because he was in harmony with the policy of the corporation at that time and still remained so. Of course this frank avowal of Mr. Jones created an embarrassing situation, and after some delay, realizing that he would not be confirmed by the Senate, the President withdrew his name. Then it was, and then only, that the President presented the name of a Republican as a member of the board.

I am of the opinion, as I have frequently stated, that the Federal Reserve Board has too much authority, too much power, and when it is under partisan control, as it is now, there is danger that its power and authority will be used to build up a great partisan machine. There is danger that intentionally or unconsciously it will use its power in a way to serve partisan purposes harmful to the general interests of the country.

DANGER OF POLITICS AND INFLATION.

At this very time I fear that the board as constituted will be largely under influences which seek a great and dangerous inflation of the currency of the country. The Democratic Party has never been free from the influence of its greenbackers and fiat-money men. The Democratic cotton-growing South is notoriously inclined to wildcat currency. Southern Members of Congress are clamoring for the repeal of the prohibitive 10 per cent tax on State-bank issues so as to start anew a flood of the State-bank wildcat currency which disgraced the country and impoverished the people in the good old Democratic days before the Civil War.

Among the many schemes of inflation which have been proposed are several bills by Mr. HENRY, of Texas, chairman of the Committee on Rules. One of these makes it mandatory on the Comptroller of the Currency to immediately deposit in Federal reserve banks in cotton-growing districts $300,000,000 of Federal reserve notes, and requires that the Federal Reserve Board shall on demand loan such moneys on cotton bills of sale at the rate of 12 cents a pound. That is equivalent to a proposition for the Federal Government to purchase at from 2 to 5 cents a pound above its value $300,000,000 worth of cotton, which cotton, it is further provided, shall be retained in the hands of the seller. Another bill by Mr. HENRY provides for the issuance of $500,000,000 of Federal reserve notes to be used for so-called loans, but in fact for purchases of cotton at 12 cents a pound. It is now selling at from 6 to 10 cents a pound. Still another bill by Mr. HENRY would authorize the use of Federal reserve notes for the same purpose to the extent of 50 per cent of the capital stock of all national banks throughout the country. All the country is to be drained for loans on the property of southern cotton planters far beyond its value. If this kind of legislation were proposed by some unknown Member of Congress, it might not excite much comment, but coming as it does from a man of long service and of responsible position we may well pause and wonder what other astounding and sectional uses the Democrats may propose for the issues under the new Federal reserve act.

It is my opinion that if the European war does not revive the industries and the business of the country and does not to a large extent relieve the country from the ill effects of Democratic administration and legislation a powerful effort will be made to use the new currency law as the vehicle of a vast inflation of credits and currency in the hope that it will for a time make things hum and start a temporary and unhealthy boom in business which will last until the inevitable crash comes. Is it a fear of these dangers ahead and of the inevitable wreck under the demands of radical Members of their party which prevents the starting of the machinery under the new currency law? More than 10 months have passed since the law was signed and yet no effort has been made to operate under it. Are our Democratic friends afraid of their own currency legislation? Apparently they are, or they would begin to do business under it.

RURAL CREDITS.

The Democratic national platform pledged the party to a system of rural credits. It is true they were not as fortunate when they came into power in the matter of rural credits as in the matter of commercial banking legislation, for in the latter the questions involved had been largely solved for them in advance, and they could not go altogether wrong, blunder as they might. When it came to the matter of rural credits, however, a matter in regard to which they had promised the farmers speedy action, they found themselves all at sea. Long hearings were had, subcommittees labored, bills were introduced, and then the trouble began. The story of what happened between the President and members of the committee and in the Democratic caucus leaked out, because certain gentlemen were so incensed at the President as to openly charge him with bad faith and so angry at their colleagues that they threatened to bolt the caucus or ignore it, but they did not. They accepted the situation, the mandate of the President and of the caucus, just as meekly as they had been doing this entire Congress.

The subcommittee, or a majority of it, wanted a rural-credits bill that would be immediately and widely useful and effective in extending credits on farm lands at low rates of interest. The President did not approve the plan. According to the Washington newspapers at the time, he said he would veto it if it passed Congress. Mr. UNDERWOOD, as the caucus boss, in spite of the impassioned protests of certain Democratic Members, cut the rural-credits bill out of the Democratic program in the caucus with a vote of about 180 to 20, so it was reported, and so the Democratic promise to the farmers went into the discard along with sundry and diverse other promises broken or unfulfilled.

THE SURRENDER TO THE TRUSTS.

Never in American history has a party so completely and utterly failed to live up to its promises or carry out its declarations as has the Democratic Party in the matter of trust legislation. Never has a party been more severely or caustically criticized for an act of surrender than were the Democratic conferees on the Clayton antitrust bill by members of their own party, particularly by Senators REED, of Missouri; MARTINE, of New Jersey; and LANE, of Oregon, all of whom voted against the conference report and voted to recommit the conference report as did Senators VARDAMAN and WILLIAMS, of

The arguments made and reasons given for repeal of the tolls provision place us in position where we never can favor either our coastwise or our over-seas commerce in the use of the canal. What a blessing it would be if at this time, when a great European war affords us an opportunity and we are passing questionable legislation to increase our foreign trade, if we were free to grant our ships engaged in commerce between our seaboard and the coasts of South and Central America favorable tolls through the canal. I have always believed that it was our foreign and not our coastwise trade that was entitled to this advantage. But having repealed the coastwise provision on the claim of the President and his advisers and supporters that we have no right under our treaty to give preference to our own ships, we are now barred from giving preference to those ships that really need it in competition in foreign trade with the ships of Great Britain and other nations.

OUR RIGHT TO PASS WARSHIPS AND FORTIFY CANAL INVOLVED.

But this surrender and foreclosure of our rights in the matter of tolls is the more serious because the same treaty interpretation, the same line of reasoning, which questions or denies our right to give any or all our ships preferential treatment in the use of the canal embarrasses, prejudices, and limits our control over the canal in other respects. It involves the question of our right to pass our warships through the canal without payment of tolls. More important still, it brings into question our right to fortify the canal, our right to protect it under certain contingencies. In other words, unless we now interpret the treaty in one way respecting our right to grant our ships preferential tolls and another way with regard to our warships and our right to fortify we shall find our control over the canal seriously jeopardized and endangered.

GIVING COLOMBIA RIGHTS WE DENY OURSELVES.

A curious sidelight on the present Democratic position is afforded by the fact that while the President was proclaiming and his party carrying out his theory that we were without authority to grant preferential terms in the use of the canal, which we built and paid for, to our own ships the administration was negotiating and later presented to the Senate for ratification a treaty with Colombia apologizing for building the canal, giving her $25,000,000 for our having done so, and giving her free passage through the canal for her war vessels and her merchant fleet. It is no credit to the administration that the storm of protest which greeted this treaty from all over the country led to its being temporarily withdrawn.

Lack of time prevents me from quoting the withering sarcasm, the impassioned eloquence, and the bitter denunciation with which Democrats, including the gentleman from Alabama [Mr. UNDERWOOD], the gentleman from New York [Mr. FITZGERALD], and the gentleman from Missouri, the Speaker of the House, as well as many members of the President's party in the Senate, characterized the surrender of our treaty rights in the Panama Canal. It is significant that in the elections which have occurred since the passage of the repeal bill those who have attempted to defend it have fared badly at the hands of the people. Our people do not desire to do anything we do not have a right to do under our treaty, but the people believe we have a right to control the canal, that we have not surrendered that right by our treaty with Great Britain, and that we should not surrender our valuable rights as owner and builder of the canal "without question" at the demand or request of a foreign power whose shipping trade will be greatly benefited by our surrender.

THE GLASS CURRENCY AND BANKING ACT.

The national banking act and the system which has developed under it is one of the best illustrations we have of the constructive capacity of the Republican Party. It was born of the exigencies of the Civil War and of the necessity of providing a sound banking and currency system to take the place of the wildcat State bank system of the Democratic Party. It met with the abusive and determined opposition of Democrats for many years, but it stood the test of time, gave the people a safe and sound currency, and sustained the public credit. It grew and expanded and met the multiplying necessities of the most marvelous and fundamentally sound national growth, development, and expansion that the world has ever seen.

As the years passed, however, it became clear that the system required new features for its proper expansion and machinery for the efficient coordination of its units. During the past 10 years as a result of much study and discussion public sentiment gradually crystallized as to the essential features of the enlargements and the additions to the national banking act, which were necessary. In May, 1908, Congress passed the Vreeland-Aldrich emergency currency act, a measure intended to carry us safely over any temporary emergency which might arise until Congress could provide permanently for such amendments and extensions of the national banking act as might be deemed necessary and advisable. As a preparation for such permanent legislation the Vreeland-Aldrich Act provided for the creation of a national monetary commission.

This commission appointed by President Taft investigated banking and currency systems and conditions at home and abroad, published many volumes of great value and interest, and submitted their recommendations in the form of proposed legislation. The change of administration prevented legislation on the subject until the matter was taken up by Congress at the special session last year. The Glass currency and banking bill, as the measure enlarging the scope of the national banking act was called, was based primarily on the report of the Monetary Commission, though the plan adopted varied from that of the commission, in detail at least, in many particulars. Some of the modifications of the Monetary Commission plan were probably improvements, but many of them and their details were faulty, obscure, and dangerous in the extreme, as was evidenced by the greatly modified form in which the bill became a law.

There was much speculation when the Glass bill was first reported as to its authorship, which I referred to in a speech delivered while the bill was under consideration.

Quite recently—that is, on August 31—this question of authorship was cleared up by the gentleman from Iowa [Mr. GOOD]. I was discussing the Alaska coal bill and calling attention to the habit that our Democratic friends have fallen into of having their bills written for them by the Government departments. Interrupting me, the gentleman from Iowa said:

Mr. GOOD. I want to ask the gentleman from Wyoming if he is sure that all of these bills have been drawn by some department head or chief? The record discloses, so far as the currency bill was concerned, the bill was drawn by H. Parker Willis, of Wall Street, and that this Congress has paid him $4,814.50 for his services, and I want to ask the gentleman if he has any assurance that there will not be other bills which will come to Congress from the heads of departments with such bills for drafting?

A NONPARTISAN QUESTION.

It is difficult to imagine any legislative question more nonpartisan in its character than the currency question. It is one of the great questions as to the details of which at least divisions of opinion do not run along party lines, and yet following the practice which they had adopted immediately on coming into power the Democratic majority in the House of Representatives proceeded to treat it as a partisan question in committee, and later to enforce the committee mandate on the Democratic Members by a binding caucus rule. The echoes of that stormy caucus still linger in the Democratic primaries in a number of States when the administration forces fought strenuously, but without success I am told, to punish certain Democrats who declined to be run over roughshod in the caucus and rebelled under the party lash.

The Democratic majority were, however, finally whipped into line, and under the caucus rule not an amendment was allowed to be made to the bill, except such as were prepared by the little coterie of gentlemen who were officiating as ringmasters. The gentlemen who were in charge of the bill, secure in their mastery of their caucus-bound brethren, were resentful of the criticisms aimed at the bill from the Republican side and rejected most of the amendments offered; a notable exception was an amendment offered from the Republican side to protect and sustain the gold standard and the gold reserves. This vital amendment was reluctantly adopted, but in the main amendments were bowled over, no matter how clear their value and their virtue was proven, and they passed their bill through the House, declaring it to be perfect. In the Senate the bill was amended in numerous and important respects, and the Democrats in the House were finally compelled to accept in the conference report many of the amendments they rejected when the bill was before the House. The currency law, with all its faults, is therefore a much better piece of legislation than the bill which passed the House.

DEMOCRATS IN EMERGENCY TURN TO REPUBLICAN LEGISLATION.

It is a curious commentary on this much-vaunted currency law that eight months after it was placed on the statute books it was not yet in working condition, and to meet the severe strain put upon our financial and banking institutions by the European war our Democratic friends found it necessary to have recourse to and take advantage of the Vreeland-Aldrich Act. Under this Republican legislation, which when it was enacted was viciously denounced by Democrats, a Democratic administration has issued three hundred millions of emergency currency which is enabling our country to withstand the suspension of gold payments by the leading nations of the world and the dumping on our markets of hundreds of millions of dollars of American securities. Thus has a Democratic administration been compelled to acknowledge the failure of its much-vaunted currency

bill to meet a critical situation and the virtue of Republican legislation in saving the credit of the country.

We all hope that the new currency law when put into effect will prove workable and successful. As it passed the House it was impossible as a working system. As amended by the Senate, under Republican hammering and largely by Republican votes, it is to be hoped it will work satisfactorily, at least until it can be amended by a Republican Congress.

ORGANIZATION BOARD.

The fundamental defects of the Glass currency bill lie largely in the political and partisan character of the organization it provides and the vast power over our national banking and credits it places in the hands of a partisan reserve board. The partisan plan and purpose of the legislation was fully illustrated by the acts of the partisan organization board appointed to organize the system. In the selection of reserve cities and the mapping of reserve districts there was every evidence of the prostitution of our banking and credit interests to partisan and personal ends. The plain intent of the law was violated in ignoring the natural course of business in the selection of reserve cities and fixing the boundaries of reserve districts. Complaints arising from many localities were ignored, or, if a hearing was given to complaints, as in the case of my own State, our people were in effect told they did not know what was good for them.

EXTREME PARTISANSHIP.

When it came to the selection of the membership of the Federal Reserve Board the partisanship and favoritism which marked the passage of the legislation through the House and the acts of the organization board were further exhibited. The first selections made for this important board were all Democrats, and, incredible as it may seem, had the President's nominees been confirmed by the Senate the probability is that this board, with its enormous powers and influence over the banks and the credits of the country, would all have been of the President's party. Among those nominated by the President for membership on the reserve board were Paul M. Warburg, a member of a great New York and international banking firm. Mr. Warburg's appointment was confirmed by the Senate, and no doubt properly. I only mention him to suggest that had a Republican President nominated a member of a great Wall Street banking house to a position of this kind every demagogue in the Democratic ranks would have howled himself hoarse about it. The President was not so fortunate, however, with one of his nominees, Thomas Jones, officer of the International Harvester Co., otherwise known as the Harvester Trust, an organization recently convicted by a Federal court as an unlawful combination in restraint of trade.

THE HARVESTER-TRUST APPOINTEE.

In connection with Mr. Jones's nomination the President took the most unusual step of writing a letter vouching for him and explaining that Mr. Jones had gone upon the board of the Harvester Trust as a reformer to assist it in mending its ways. When, however, a Senate committee interrogated Mr. Jones, he refused to pose as a reformer, declared he became a member of the governing board because he was in harmony with the policy of the corporation at that time and still remained so. Of course this frank avowal of Mr. Jones created an embarrassing situation, and after some delay, realizing that he would not be confirmed by the Senate, the President withdrew his name. Then it was, and then only, that the President presented the name of a Republican as a member of the board.

I am of the opinion, as I have frequently stated, that the Federal Reserve Board has too much authority, too much power, and when it is under partisan control, as it is now, there is danger that its power and authority will be used to build up a great partisan machine. There is danger that intentionally or unconsciously it will use its power in a way to serve partisan purposes harmful to the general interests of the country.

DANGER OF POLITICS AND INFLATION.

At this very time I fear that the board as constituted will be largely under influences which seek a great and dangerous inflation of the currency of the country. The Democratic Party has never been free from the influence of its greenbackers and fiat-money men. The Democratic cotton-growing South is notoriously inclined to wildcat currency. Southern Members of Congress are clamoring for the repeal of the prohibitive 10 per cent tax on State-bank issues so as to start anew a flood of the State-bank wildcat currency which disgraced the country and impoverished the people in the good old Democratic days before the Civil War.

Among the many schemes of inflation which have been proposed are several bills by Mr. HENRY, of Texas, chairman of the Committee on Rules. One of these makes it mandatory on the Comptroller of the Currency to immediately deposit in Federal reserve banks in cotton-growing districts $300,000,000 of Federal reserve notes, and requires that the Federal Reserve Board shall on demand loan such moneys on cotton bills of sale at the rate of 12 cents a pound. That is equivalent to a proposition for the Federal Government to purchase at from 2 to 5 cents a pound above its value $300,000,000 worth of cotton, which cotton, it is further provided, shall be retained in the hands of the seller. Another bill by Mr. HENRY provides for the issuance of $500,000,000 of Federal reserve notes to be used for so-called loans, but in fact for purchases of cotton at 12 cents a pound. It is now selling at from 6 to 10 cents a pound. Still another bill by Mr. HENRY would authorize the use of Federal reserve notes for the same purpose to the extent of 50 per cent of the capital stock of all national banks throughout the country. All the country is to be drained for loans on the property of southern cotton planters far beyond its value. If this kind of legislation were proposed by some unknown Member of Congress, it might not excite much comment, but coming as it does from a man of long service and of responsible position we may well pause and wonder what other astounding and sectional uses the Democrats may propose for the issues under the new Federal reserve act.

It is my opinion that if the European war does not revive the industries and the business of the country and does not to a large extent relieve the country from the ill effects of Democratic administration and legislation a powerful effort will be made to use the new currency law as the vehicle of a vast inflation of credits and currency in the hope that it will for a time make things hum and start a temporary and unhealthy boom in business which will last until the inevitable crash comes. Is it a fear of these dangers ahead and of the inevitable wreck under the demands of radical Members of their party which prevents the starting of the machinery under the new currency law? More than 10 months have passed since the law was signed and yet no effort has been made to operate under it. Are our Democratic friends afraid of their own currency legislation? Apparently they are, or they would begin to do business under it.

RURAL CREDITS.

The Democratic national platform pledged the party to a system of rural credits. It is true they were not as fortunate when they came into power in the matter of rural credits as in the matter of commercial banking legislation, for in the latter the questions involved had been largely solved for them in advance, and they could not go altogether wrong, blunder as they might. When it came to the matter of rural credits, however, a matter in regard to which they had promised the farmers speedy action, they found themselves all at sea. Long hearings were had, subcommittees labored, bills were introduced, and then the trouble began. The story of what happened between the President and members of the committee and in the Democratic caucus leaked out, because certain gentlemen were so incensed at the President as to openly charge him with bad faith and so angry at their colleagues that they threatened to bolt the caucus or ignore it, but they did not. They accepted the situation, the mandate of the President and of the caucus, just as meekly as they had been doing this entire Congress.

The subcommittee, or a majority of it, wanted a rural-credits bill that would be immediately and widely useful and effective in extending credits on farm lands at low rates of interest. The President did not approve the plan. According to the Washington newspapers at the time, he said he would veto it if it passed Congress. Mr. UNDERWOOD, as the caucus boss, in spite of the impassioned protests of certain Democratic Members, cut the rural-credits bill out of the Democratic program in the caucus with a vote of about 180 to 20, so it was reported, and so the Democratic promise to the farmers went into the discard along with sundry and diverse other promises broken or unfulfilled.

THE SURRENDER TO THE TRUSTS.

Never in American history has a party so completely and utterly failed to live up to its promises or carry out its declarations as has the Democratic Party in the matter of trust legislation. Never has a party been more severely or caustically criticized for an act of surrender than were the Democratic conferees on the Clayton antitrust bill by members of their own party, particularly by Senators REED, of Missouri; MARTINE, of New Jersey; and LANE, of Oregon, all of whom voted against the conference report and voted to recommit the conference report as did Senators VARDAMAN and WILLIAMS, of

Mississippi, and Senator THOMAS, of Colorado. The fact is the Democratic majority without wisdom or information started on a crusade alleged to be aimed at monopoly, but in fact prejudicial to all business. Their acts and utterances combined with the effect of their tariff legislation brought business in so many lines to a standstill that they became terrified at the effect. There were conferences at the White House, attended by Wall Street bankers and great manufacturers. Later the Clayton bill got into the hands of the conferees, the Democratic members of which proceeded to perform a dental operation on the bill and removed all its teeth by striking out several clauses providing heavy fines and imprisonment. I take the liberty of inserting some remarks I made at the time the conference report was under consideration in the House, as follows:

"For a year and more the trade and business interests of the country have been in a constant state of alarm and terror as the Cossacks of Democratic radicalism have charged and countercharged with blare of trumpets and waving of banners, with declarations of implacable hostility to trusts and monopoly, and of fixed determination to put an end to all acts and practices in business which their medieval fancy disapproved. Their indiscriminate condemnation and Falstaffian fury inspired terror everywhere, but more particularly among those of energy and enterprise against whom no charge could be laid except that they had been successful. Honest and legitimate enterprise halted as the country awaited the expected blow, uncertain whether real wrongdoers and malefactors or inoffensive citizens and innocent bystanders were to be the most severely punished.

"So far as the real offenders against sound public policy and real oppressors of the people are concerned, it is all over. The Democratic conferees have sounded the retreat; the raiders have been called in. Their trumpetings no longer alarm the real enemies of commercial freedom, and we behold these erstwhile terrors of the countryside for what they really are—tin soldiers with toy guns and wooden swords. [Laughter and applause on the Republican side.] Behold before you the trophy of their sham battling against the trusts and the trade oppressors—a soiled and trailing flag of truce and a declaration of absolution and immunity.

"But how about the innocent bystander—the legitimate business enterprise, the undertaking to which fair practice, faithful and efficient service has brought success? Do they participate in the fruits of compromise and surrender? Not at all. They find themselves, in the words of a newspaper of this city, in 'a vast labyrinth of prohibition and restriction, through which every concern above the level of a corner grocery will have to feel its way. The inevitableness of contravention of some clause by almost any business man is evident, until the whole field of affairs is plotted and mapped by means of administrative rulings and court decisions.' The conference report presents, therefore, one of those strange anomalies of legislation through whose loopholes the real culprit may pass unscathed, but whose meshes tangle every footstep of the honest and well meaning who have the energy and enterprise to tread the paths of commerce where its snares are laid.

"This conference report, if adopted will not accomplish or advance the abatement of unfair and oppressive practices in trade and enterprise. It is, on the contrary, a backward movement; a confession of incompetency, if nothing worse; a confusion of the issues by the belated confession of its apologists and defenders. It is now not even claimed to be an effective instrument against trusts and monopolies established and intrenched or hereafter formed. Heralded as a battery of heavy trust-busting artillery, it now develops that its instrumentalities, far from having any effectiveness for those purposes, is an aggregation of smooth-bore hot-air guns, its projectiles the dimensions of a shriveled pea and the consistency of a blue-mass pill. As an irritant and an obstruction to the enterprising and law abiding it has, however, all of the efficiency of a barbed-wire entanglement reenforced by hidden mines and concealed pitfalls.

"Some gentlemen imagine that some will be cajoled or coerced into voting for this apology to the trusts—this fraud and sham, as it has been characterized in another body—because of some provisions I have supported which are desired by some labor organizations. One of the best friends of labor in public life has characterized those provisions as the 'cheapest sop that has ever been offered to a laboring man.' Another has described them as 'taffy.' I do not altogether agree with that characterization, but everyone knows that these provisions are not what the representatives of labor sought or asked for, that they have been clipped, trimmed, diluted, and toned down until they are in the main but declarations of present law and practice. Laboring men have infinitely more interest in preventing unfair trade practices and the curbing of monopoly than they have in any mere declaration of an existing fact. They are the last people in the world to ask or expect that any provision of legislation of questionable advantage to them be made the excuse for complete surrender to the trade sharks which infest the waters of commerce, destroying competition, and the monopolies which enhance the cost of living for all. [Applause on the Republican side.]"

The defeat of the conference report would have in no wise endangered the provisions on the bill that were approved by organized labor. Those provisions had been adopted by both Houses and could not therefore have been eliminated or modified by the conferees within their authority. Could the bill have been sent back to conference the conferees could have reinserted the penal provisions that had been dropped out by them and returned the bill to both Houses within an hour, but the majority had definitely determined that no real effective anti-trust legislation should be enacted, and in accordance with the terms of their surrender they voted for the conference report.

THE TRADE COMMISSION BILL.

Whenever a Democratic Congress sets out to fulfill a Republican platform pledge it does a wise thing, and should be commended, even though its product is imperfect. The last Republican national platform approved the creation of a Federal Trade Commission. A Democratic Congress, with the aid of the Republican minority, has carried out that pledge. Naturally Republicans voted for the Federal Trade Commission bill, though many of them were not entirely pleased with the form in which the bill was finally enacted. The Federal Trade Commission will, however, it is hoped, by its operations and through the prohibition of unfair competition carried in the bill, put an end to many unfair practices which now injure and harrass legitimate business.

THE PRESIDENT AND CONGRESS.

Our Federal Constitution provides for a government consisting of three independent coordinate branches—the executive, the legislative, and the judicial—and the theory of that great instrument is, and our belief has always been, that these three branches should, to secure the best results in government, operate independently; neither unduly influenced by the others, but each in its respective field performing its peculiar functions.

It is true that it is the duty of the President to make recommendations to Congress, and it is clearly the duty of Congress to give due weight and proper consideration to the recommendations of the President. Of all our political parties the Democratic has perhaps laid the greatest stress on the necessity of independence of thought and action on the part of the legislative branch of the Government; and yet it is a notorious fact that under the present Democratic administration Congress has subordinated its views and its opinions to those of the Executive to an extent hitherto unknown in our Government. It may be claimed that the judgment of the President is in all things better than the combined judgment of his party as represented in House and Senate. Certainly such a claim does not reflect credit on the Democratic Congress.

COMPLETE SUBSERVIENCY.

Time and again during this prolonged session the President's party in Congress has clearly demonstrated its complete subserviency to his views and opinions—on one important subject, the Panama Canal tolls, to the extent of reversing its own action and violating its platform pledges. It is true that this subserviency has not always been without protest. In a number of important matters some of the strongest members of the President's party have rebelled and protested; but through the powerful influences which a President controls the party caucus has decreed, and a majority has been wheedled or coerced into, support of the President's views. We have thus seen a Democratic Congress surrender its views on certain features of a tariff bill, of currency, and other important legislation. Most recently of all, the insistent demand of the President has compelled his party in Congress to accept his views with regard to the laying of unusual burdens on the people through direct taxes in time of peace.

THE DEMOCRATIC CONGRESS.

For years Democratic platforms, Democratic spellbinders, and demagogues generally, inveighed against the alleged control and domination of Congress by certain leaders, and behold

this first Democratic Congress for 20 years, with the party in control of all branches of the Government, has been dominated and controlled, so far as the House of Representatives is concerned, by its leaders and its organization to an extent hitherto unknown in American history. The binding party caucus, rarely utilized by Republicans, and never in recent years, has been invoked time and again. The party lash has been used without stint or limit, and the majority has been compelled to accept the caucus mandate without regard to the individual views of its members. In 16 years of service in Republican Congresses I remember but two occasions where the binding caucus rule was invoked, but in this Congress Democrats have been bound time and again to support measures and to vote against amendments contrary to their will and judgment. How empty and hollow and insincere Democratic outcries against Czarism, Cannonism, and bossism appear in the light of the action of the leaders and the bosses in this Democratic Congress. In the passage of the recent so-called war revenue bill no opportunity for amendment and little for debate was given. It is true that the Speaker has less power than formerly, but the power of which he was shorn has all and more been vested in the majority leader and a little coterie of which he is the head. The Speaker himself has invoked with emphasis the most extreme rulings of "Czar" Reed, the while proclaiming the virtue and the necessity of such rulings. Democratic gag and boss rule in Congress puts to shame anything ever dreamed of by Republicans.

THE REIGN OF RHETORIC.

This is the reign of rhetoric. Things are not as they are, but as we are told in smoothly turned phrases they should be and really would be if we could only bring ourselves to so view them. Rhetoric is sometimes mighty persuasive, particularly if it is uttered in high places. Some people are persuaded by it that their ills are only psychological, or, leastwise, that other people's ills are of that character. A few aptly turned phrases convince some folks that a party pledge is best kept by being broken. Still others can be persuaded by it that creeping paralysis in Federal revenues, observed by all for months, is in fact a sudden stroke induced in an instant by the war in Europe.

PARTISANSHIP.

Perhaps the greatest recent triumph of rhetoric, of a happy style of phraseology, of charming diction, has been in the creation and the maintenance of the idea that this is an administration idealistically devoted to the public welfare without regard to party interests. I am a believer in party responsibility, and therefore I would be the last to criticize the strengthening of party lines as a means to public service. Our last Republican President delighted to honor men outside his party, and he called Democrats not only to his Cabinet but to other places of honor and responsibility. He overdid his bipartisanship, and he never received any credit for it. No such charge will ever be made against the administration of President Wilson. If any Republican has ever received an appointment at his hands, he is a rare bird enough to be valuable for exhibition purposes. Even the Progressives, to whom the Democrats owe so much, have been entirely overlooked when it came to the distribution of patronage. None but Democrats need apply. "Put none but Wilson Democrats on guard," has been the slogan, and when there were not places enough to go around in the old offices vacated and the juicy new ones created, enough places have been lifted out of the civil service to meet any reasonable demand. But the demand has not been reasonable, and therefore is still unsatisfied.

Under Republican administrations Democrats have felt free to express their views and opinions to heads of Government departments and at the White House; in fact, advice and expression of opinion outside of the party were frequently sought or, at least, gladly received. But times have changed. Suggestions from Republicans in official life would now receive about the same consideration at the White House as would advice from the White House butler on how to handle the Mexican situation. I do not know the political faith of a considerable number of "captains of industry" and Wall Street magnates who of late have, by invitation or otherwise, been such frequent visitors at the White House, but it is not of record that any Republican or Progressive in official life has felt that his advice or suggestions on any subject whatever would be welcomed at the White House. In other words, this is the most intensely partisan administration of which men have any recollection, and narrow in its partisanship at that. That is something that should be kept in mind both in giving credit and in laying blame.

Eulogy on the Dog, by Senator Vest, of Missouri.

EXTENSION OF REMARKS
OF
HON. CLEMENT C. DICKINSON,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. DICKINSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a speech made at Warrensburg, Mo., in the district which I have the honor to represent, by a distinguished Missourian, a former United States Senator, Hon. George G. Vest, a matchless orator and leader of the Democracy of his State, a great character, admired because of his great ability and fearless courage and integrity, to be accompanied by a letter from Judge John F. Philips, his former law partner, and a former distinguished Representative of this House, reciting the circumstances of said speech—a tribute to the best friend of man:

EULOGY ON THE DOG.

[By Senator Vest, of Missouri.]

"Gentlemen of the jury, the best friend a man has in this world may turn against him and become his enemy. His son or daughter whom he has reared with loving care may prove ungrateful. Those who are nearest and dearest to us—those whom we trust with our happiness and our good name—may become traitors to their faith. The money that a man has he may lose. It flies away from him, perhaps when he needs it most. A man's reputation may be sacrificed in a moment of ill-considered action. The people who are prone to fall on their knees to do us honor when success is with us may be the first to throw the stone of malice when failure settles its cloud upon our heads. The one absolute, unselfish friend that man can have in this selfish world—the one that never deserts him, the one that never proves ungrateful or treacherous—is his dog.

"Gentlemen of the jury, a man's dog stands by him in prosperity and in poverty, in health and in sickness. He will sleep on the cold ground, where the wintry winds blow and the snow drives fiercely, if only he can be near his master's side. He will kiss the hand that has no food to offer, he will lick the wounds and sores that come in encounter with the roughness of the world. He guards the sleep of his pauper master as if he were a prince. When all other friends desert, he remains. When riches take wings and reputation falls to pieces he is as constant in his love as the sun in its journey through the heavens. If fortune drives the master forth an outcast in the world, friendless and homeless, the faithful dog asks no higher privilege than that of accompanying him to guard against danger, to fight against his enemies. And when the last scene of all comes, and death takes the master in its embrace, and his body is laid away in the cold ground, no matter if all other friends pursue their way, there by his graveside will the noble dog be found, his head between his paws, his eyes sad but open in alert watchfulness, faithful and true even to death."

Judge John F. Philips, United States judge of the western district of Missouri (retired), and a former law partner of Senator Vest, gives the following account of the circumstances that occasioned this famous tribute to the dog:

"In the early seventies a Kentuckian residing in Johnson County, Mo., owned a noted hound named Old Drum, imported from Kentucky. He was always reliable; when he made outcry on the hunt, it was an assurance that the trail of the fox or deer was scented hot, and he led the pack in the chase. The owner had for the faithful dog a devotion akin to affection. One morning Old Drum was found shot to death near a neighbor's house. Circumstances of small evidential import pointed to that neighbor as the assassin of Old Drum, which induced a suit in justice of the peace court to recover $150 damages, the maximum sum recoverable in that jurisdiction. After one or more hung juries, there was a verdict for the defendant. The plaintiff appealed the case to the higher court. The costs had piled up enormously, and the hot blood of the litigants was up. Eminent counsel were employed on either side. Among those for the plaintiff was Col. Wells H. Blodgett, for many years the general solicitor of the Wabash Railroad Co. When the case was up for the second trial Vest chanced to be in attendance upon the court. Blodgett persuaded his client to employ Vest, who was waiting to try some important case. His fondness for the good dog obtained his assent.

"The trial had already begun; Vest merely sat by as if a spectator during the examination of the multitude of witnesses. The discussion before the jury by the other counsel had consumed the short winter day; and the court, insisting that the case should be given to the jury that evening, took a recess until after supper. 'The dog case' had attracted the attention of all Warrensburg; and the fact that George Vest was to speak that night 'in a dog case' filled the court room almost to suffocation with men, women, and boys.

"One of the counsel for the defendant had derided such a lawsuit about a hound dog of little value if not a neighborhood nuisance. Vest paid little attention to the evidence or law of the case, but leveled the whole artillery of his genius to a vindication of the dog's invaluable traits. So vibrant with pathos was his voice that men and women wept, and the jury was swept from deliberation, and returned a verdict at once for the plaintiff for $500, when the sum sued for was only $150. The excess was remitted and 'the dog case' was closed; but Vest's tribute to the dog is immortal."

The Cotton Situation in the South.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. BURNETT. Mr. Speaker, in great crises legislators ought not to haggle or split hairs over fine-spun theories as to the Constitution. Constitutions are made by the people, and they ought to be subservient to the needs of the people.

A financial crisis is upon the people of the South such as has not existed there since the dark days of war and reconstruction.

The bow of prosperity hung over my people for the last two years, until the war clouds of Europe obscured it and brought ruin and desolation upon us.

A few days before war was declared cotton was selling at 13 cents a pound; a few days afterwards it dropped far below the cost of actual production.

The European countries involved in the war buy about two-thirds of our cotton, while our mills in the United States manufacture about one-third of it. An extraordinarily large crop has been grown, and the war has shut us out from all the European countries except England. England is so demoralized by the war that as yet it has not begun to buy anything like its usual quota of our crop.

Republican spellbinders in the South are trying to make the people believe that a Democratic administration has brought this disaster on our main crop. That declaration is an insult to the intelligence of our people. Any sane man knows that it would be impossible, after the Democratic Party had been in power nearly two years, with cotton high all that time, for the administration to reduce it half in one short week. In the able speech just delivered, Mr. MANN, the great leader of the Republican Party in the House, who will probably be the next Republican nominee for President, said:

> The European war has created a situation where it seems to be certain that we really can not in a normal time consume the cotton now in existence. Ordinarily the cotton crop and the raisers of cotton must depend upon the market for cotton, upon the use of cotton for manufacture, but we have reached this situation where we know that the market will not absorb all of the cotton and will not use all the cotton. Even if cotton were to sell for a cent a pound, even if the raisers of cotton were to give it away, it could not and would not all be used within the normal time for its use—that is, the crop of cotton, or what is now in existence.

This great Republican leader places the responsibility for conditions on the European war, where all reasonable men know it belongs.

Immediately after Mr. Wilson's election two years ago the price of cotton began to rise, and two crops have been sold at the largest price that we have realized for years.

Some Republican and Progressive speakers try to charge the low price of cotton to the Underwood tariff bill. Everybody knows that this is absurd. The Democratic Party came in pledged to a reduction of the tariff. Everybody knew that this would be done. Then, if the reduction of the tariff could have had any such effect on cotton, does not any sane man know that it would have immediately declined? Instead of that it began at once to rise. The Underwood bill became a law on the 3d day of October, 1913, and yet all through that year and 1914, until this war was declared, cotton brought a good price.

This shows the absurdity of the contention of those who would deceive the people with such sophistry.

Those who advance such arguments are not fair enough to remind the people that in the falls of 1904 and of 1907 cotton went to 7 cents per pound. If the farmers will refer to their cotton bills, they will see that this is true, and that under the full force of the Dingley high-protective tariff bill.

No Republican then loved the South well enough to propose any measure that would save the Southern cotton grower. How different now. When the European war has utterly destroyed our market, the Members of Congress from the South are crying aloud for Congress to come to the rescue of our southern farmers. Many meetings have been held by the Members from the cotton States to try to evolve some plan by which our people may be enabled to escape the destruction which hangs over them. I do not question the sincerity of gentlemen who believe that Congress has no right to pass laws to aid the distressed cotton growers by direct aid, but I do insist that they are wrong. Often we have gone to the rescue of those who are in dire distress. When San Francisco was overwhelmed by an earthquake we did not haggle over our constitutional right to go to her relief. When the rivers in Ohio had overflowed their banks and destroyed towns and farms, no one questioned the right of Congress to give them direct aid.

When the little town of Salem, Mass., fell before the fire fiend, our President sent a special message asking Congress to go to their relief, and no one then interposed the Constitution against that bill. Many more instances of a like kind I might cite, but will desist.

I do not doubt the right of Congress to give relief to the southern farmer in some way like that prescribed in the Henry bill, and, as for myself, I shall vote against any resolution to adjourn unless something like it is passed. I may be voted down, and adjournment may be had without relief to our stricken South, but as for me, I intend to stay here and vote against adjournment until the Speaker's gavel falls.

Republican speakers are in my district trying to compass my defeat, but my post of duty is here, and here will I stay till a majority votes me down. I will trust to God and my people to take care of me, as they have so often done.

In the Senate Senator SMITH has offered an amendment somewhat like the Henry bill pending in this House. Senators SMOOT and MCCUMBER, two standpat Republican leaders, are trying to load it down and defeat it by providing for the purchase of copper and of wheat and oats and barley. Senator MCCUMBER denounced the bill for the relief of our stricken farmers as paternalism. Mr. Speaker, if saving my people from bankruptcy and ruin be paternalism, then I pray God for more paternalism.

The standpat Republicans have never been the friends of our cotton farmers. I once heard the gentleman from New York [Mr. PAYNE], the author of the Payne tariff bill, criticize our farmers' organizations of the South as trusts, and say that cheap cotton was in the interest of his people.

The representatives of the farmers' union have been here day after day to try to aid us in securing relief for our stricken people. I have met with them time and again, as have many other Members from the South, in trying to solve this grave question, and the Henry bill, which I will insert as part of my remarks, is the result of these meetings; and I intend to vote for it or something like it if the opportunity is given me. Mr. Barrett, the great president of the Farmers' Union, Mr. Ford, the worthy Alabama State president of that great body, and many others have been with us and can testify to my activity and zeal and that of other southern Members.

I am sure, Mr. Speaker, that some relief will soon come to the southern farmer without the Henry bill, but not to the extent that I know they deserve. They ought to have at least 10 cents a pound for their cotton to pay the actual expense of production.

The Federal reserve organization will be completed by the 15th of November, and then at least $150,000,000 will be placed in southern banks, and loans on cotton can be had.

The Festus Wade pool will be completed in the next week or so, and $150,000,000 more will be available for loans on cotton. The buy-a-bale movement will take 2,000,000 bales off the market and help some, and thus, without this bill, I believe that cotton will go back to 9 or 10 cents per pound by November 15. But, Mr. Speaker, our people are entitled to some profit on their sweat and brawn, and with the passage of the Henry bill cotton would go to 12 cents in less than 30 days.

The English and American mills, in my opinion, are in a deep conspiracy to keep down the price of the product of the farmer's toil. These mills are fast consuming their supply of cotton and in less than a month will need many hundred thousand bales. If our people can hold out, the price is bound to improve. The Henry bill, Mr. Speaker, will help them to hold.

Not only is the southern farmer's crop in dire distress, but in speaking for him I am speaking for the merchant and banker whom he owes, the banker whom the merchant owes, and the great northern banker whom the southern banker owes. The cotton grower is the prime foundation on which the others rest. If he goes down, bankruptcy and ruin await all of those above him.

Do not say we can not do this. We can do it; and let us all pull together for the weal of the toiling millions who look to Washington for aid. These people have been my friends. Whenever I have sounded the call to arms they have rallied to the standard which I have borne, and now when they raise the Macedonian cry I am with them heart and soul. [Applause.]

A bill (H. R. 19245) for the temporary relief of cotton and tobacco growers of the United States.

Be it enacted, etc., That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in States producing cotton or tobacco, or both, $250,000,000, or so much thereof as may be necessary to carry out the purposes and under the terms and conditions of this act, to be advanced to the producers of cotton and tobacco, or owners of lands upon which the same was produced, upon cotton or tobacco produced during the year 1914, at a rate of interest not exceeding 4 per cent per annum. The deposits herein authorized shall be advanced upon the terms prescribed in this act and under rules to be prescribed by the Secretary of the Treasury. The deposits herein directed to be made shall be apportioned among the several States in accordance with the number of bales of cotton and pounds of tobacco produced therein during the year 1913, as ascertained by the Department of Agriculture.

SEC. 2. That the Secretary of the Treasury shall, in his discretion, either immediately cause to be prepared United States notes to the extent of $250,000,000 to be used for the purpose of making the deposits in compliance with this act, which said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe; or he may sell not exceeding $240,000,000 of Panama Canal bonds, heretofore authorized by law, at a rate of interest not exceeding 3½ per cent per annum, and the act or acts heretofore passed authorizing the disposition of said bonds are hereby amended so as fully to authorize the disposition and use of such bonds as is herein prescribed; or, in his discretion, the Secretary of the Treasury may use both the proceeds of the bonds and the notes in order to carry out the purposes of this act, not to exceed in the aggregate $250,000,000: *Provided*, That such United States notes, should the Secretary of the Treasury conclude to issue them, deposited under this act and not used as prescribed herein shall be returned to the Secretary of the Treasury and shall be destroyed.

SEC. 3. That this act shall take effect and be in force upon its passage.

SEC. 4. That this act shall expire by limitation on the 31st day of December, 1915.

The Philippine Islands.

EXTENSION OF REMARKS

OF

HON. MOSES P. KINKAID,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 19, 1914,

On the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands.

Mr. KINKAID of Nebraska. Mr. Chairman, assuredly I do not rise for the purpose of launching an extended argument. My purpose is rather to avail myself of a substitute for the privilege which is allowed a member of the legislature in Nebraska, which State I have the honor to in part represent, to explain his vote in the RECORD when he does not make a speech upon the pending question, but that mode is not allowed by our House rules, but an explanation must appear in speech form.

Mr. Chairman, it will be with some reluctance that I shall vote against, first the preamble to the bill, and then the bill itself, because at first blush the preamble expresses my genuine sentiment that the Filipino people will be entitled to their independence when they shall show themselves qualified for self-government. But the language of the preamble is entirely too indefinite. I should vote for the preamble if made definite by an amendment expressing the convictions of Members who have always believed in the future independence of the Philippines when their peoples should become qualified for the exercise of self-government. But, Mr. Chairman, it is foregone that the amendments offered by the gentleman from Minnesota to this end and such other amendments as may properly be offered to accomplish the same purpose will be voted down. Besides, we all recognize that the preamble performs no office so far as conferring rights upon the Filipinos may be concerned. It will be no part of the act when the bill is passed. It will have no legal efficiency whatever. If it may be contended that it constitutes a pledge or a promise, it is objectionable in that it goes so far in meaning beyond the act which follows it, but my principal objection to it as a pledge or promise is that it is too indefinite and so liable to be misconstrued by the larger percentage of the natives of the Islands who are not qualified to comprehend the meaning of such a production as are the more advanced and better qualified Filipinos.

Mr. Chairman, from the time of the victory of Admiral Dewey in Manila Bay I have been unqualifiedly opposed to the United States extending its territorial jurisdiction permanently over the Philippine Islands and their inhabitants. It would be thoroughly incompatible with our traditions and institutions that we should embark permanently on a colonial policy, and the inconsistency would be emphasized if we should go across the Pacific Ocean to do so. In fact, it would be even unconstitutional that we should extend our territory over a foreign people with a view to subjecting them permanently to the control of our Government without securing to them the right to erect States and adopt and live under State constitutions as do the people of the States of our Republic, with equal rights of our present States and their people. Were we to create States in the Philippines and accord them Representatives and Senators, where then should the line be drawn on other orientals?

Mr. Chairman, my judgment upon this question was formed very early, but it is in accord with the announcements of our party leaders, assuming the President of the United States to be ex officio the leader of his party. One of the first utterances of President McKinley after the treaty with Spain was adopted was to the effect that the islands were to be governed for the benefit of the Filipinos, and as they developed fitness for self-government it should be gradually extended to them. Every act of the McKinley Administration, also of the Roosevelt Administration, was in conformity with that utterance. Let me quote a few excerpts from the last annual message of President Roosevelt. He said:

> The Filipino people, through their officials, are therefore making real steps in the direction of self-government. I hope and believe that these steps mark the beginning of a course which will continue till the Filipinos become fit to decide for themselves whether they desire to be an independent nation.
>
> All we can do is to give them the opportunity to develop the capacity for self-government. If we had followed the advice of the foolish doctrinaires who wished us at any time during the last 10 years to turn the Filipino people adrift, we should have shirked the plainest possible duty and have inflicted a lasting wrong upon the Filipino people. * * * Under the present system of just laws and sympathetic administration we have every reason to believe that they are gradually acquiring the character which lies at the basis of self-government, and for which, if it be lacking, no system of laws, no paper constitution will in anywise serve as a substitute. * * * I trust that within a generation the time will arrive when the Filipinos can decide for themselves whether it is well for them to become independent or to continue under the protection of a strong and disinterested power able to guarantee to the islands order at home and protection from foreign invasion. But no one can prophesy the exact date when it will be wise to consider independence as a fixed and definite policy. It would be worse than folly to try to set down such a date in advance, for it must depend upon the way in which the Filipino people themselves develop the power of self-mastery.

President Taft, who was the first Governor General of the islands and administered their affairs in a way highly creditable to the United States, expressed himself as follows:

> What should be emphasized in the statement of our national policy is that we wish to prepare the Filipinos for popular self-government. This is plain from Mr. McKinley's letter of instructions and all of his utterances. It was not at all within his purpose, or that of the Congress which made his letter part of the law of the land, that we were merely to await the organization of a Philippine oligarchy or aristocracy competent to administer the government and then turn the islands over to it.

Mr. Chairman, I am in accord with these statements made by the three Republican Presidents as to the future independence of the Filipino people. Neither do I harbor any mental reservation of doubt of their obtaining ultimate independence by reason of their want of qualifications therefor. That they will become so qualified is neither impossible nor improbable, but it is quite reasonable and in conformity with the natural laws of advancement of the human race. But mere legislation can not qualify them for self-government. Necessarily their advancement must be gradual. The young athlete did not attempt to lift an ox at the start, but commenced on the calf, carrying it daily until it was a yearling, then a 2-year-old, and finally a great ox. Similarly gradual increase of political local autonomy conferred upon the Filipino people will stimulate and further develop their qualifications for self-government and eventually they will attain an adult degree.

Mr. Chairman, it is not my belief that the United States is to arbitrarily prescribe the form of permanent self-government

which the Filipino people shall adopt for themselves. On the contrary, it is my view that the Filipinos must be left free to choose their own form of permanent self-government. My advice to them would be that they adopt a conservative representative form of government to start with, making it more democratic, if they should choose, as the average qualification should rise; but I grant to them that it will be their prerogative to choose a representative form, or even a pure democracy or a government of mixed forms of several kinds, according to their liking. Consistently, if they are to be a free people, they will be entitled to choose their own form of government to the same unqualified extent that our forefathers chose our form of government when we were emancipated from the monarchial form.

Mr. Chairman, I have never wavered from my convictions instinctively formed when the question first arose that the future welfare of the United States would not be conserved by our permanent possession of the Philippine Islands and political control of their peoples, and I shall be most happy that the time shall arrive when we may honorably and respectably find it to the interests and welfare of the Filipino people that they assume unto themselves the right of self-government as one of the independent nations of the world. To the inhabitants of the islands thus qualified I shall be glad to say, "God speed to your new-born National State."

Cotton.

EXTENSION OF REMARKS

OF

HON. KENNETH D. McKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 21, 1914.

Mr. McKELLAR. Mr. Speaker, I ask unanimous consent to insert as a part of my remarks representative letters and petitions from some of my constituents on the subject of cotton. They show the conditions down there better than we can portray them here. I know these people and know they would not write this way without cause. I get these letters every day. They need the legislation we are seeking here, and they need it right away. It will not do the producer any good after 60 days. I have said all along that I shall never vote to adjourn until we get a vote on this measure of relief, and I never shall. The letters and petitions follow:

MASON, TENN., No. 1, *October 17, 1914.*

Hon. K. D. McKELLAR, *Washington, D. C.*

DEAR SIR: I am in receipt of yours of October 14, contents noted. I thank you for promptness. I am sending herewith a request from a few planters I have met this morning, urging the passage of some bill looking to the relief of the planter. If the producer gets any relief, it must be given quickly, for he will be compelled to sell in the next 30 days to meet his obligations. I certainly hope Congress can pass a bill that will give relief. If relief does not come, the cotton States will be almost bankrupt. I know you are in full sympathy with the planter, but you can not appreciate the conditions unless you are on the ground. I am sure if Congress understood the conditions as they exist some measure of relief would pass instanter.

Yours, very truly,

JNO. D. McCLANAHAN.

—

MASON, TENN., No. 1, *October 17, 1914.*

Hon. K. D. McKELLAR, *Washington, D. C.:*

We the undersigned citizens and planters of cotton urge you to use your greatest efforts to secure the passage of a bill for the relief of the producers of cotton.

Jno. D. McClanahan, G. W. Hood, G. M. Turner, Samuel Williams, Jno. Y. Wilson, Henry Frost, James Cross, H. C. Holloway, E. G. Cothran, C. B. Cothran, E. W. White, Henry Brown, Ike Parks, Lee Key, Dupree Frazier, S. W. Beddingfield, E. R. Clifton, W. E. Clifton, A. B. Wellborn, J. D. Byrd, V. Byrd, Joe Tinsdale, J. T. Dickerson, Ed. Barres, Jno. Barret, Mack Goode, Robert Goode, W. W. Simpson, S. A. Burkhart, W. A. Clement, G. A. Burkhart, Jim Simpson, T. H. Forgery, J. R. Marshall, M. O. Shinault, T. C. Cade, B. V. Fields, George Smith, O. V. Poindexter, B. L. Marsh, M. W. Winberry, Robert Flowers, James Watkins.

—

MASON, TENN., *October 17, 1914.*

Hon. K. D. McKELLAR, M. C.,
Washington, D. C.

GREETING: We, the people of the cotton district, petition you to use your best endeavors and influence to bring about legislation at once to relieve the situation that confronts us in this the distressed cotton districts.

G. W. Marsh, postmaster; G. K. Gray, E. N. Lackey, J. E. Barton, R. C. Turner, J. L. Cathron, D. P. Trousav, W. M. Williamson, W. T. Williamson, W. E. Frawley, S. H. Smith, Dr. W. D. Gray, W. F. Carter, S. L. Delaney, J. G. Hamblet, Dale Hamblet, J. L. Hamblet, B. J. Barton, R. T. Hendrick, W. J. Cody, C. A. Yarbro, A. T. Sanders, M. F. White, W. G. Jackson, Dr. E. A. Tanneter, O. T. Marshall, I. S. Clement, B. L. Hamblet, O. T. Marshall, jr., Charles T. Booker, J. E. Shelton, R. T. Seay, J. W. L. Poindexter, J. M. Marshall, J. R. Marshall, J. N. Moseley, W. H. Trout, C. T. Poindexter, W. D. Hunt, S. M. Shelton, G. A. Taylor, Dr. A. C. Somervell, W. B. Clement, E. F. Steward, F. L. Myers, R. E. Rogers, Clarence Faulk, W. J. Faulk, J. T. Korney, A. B. Harris, J. S. Phllips, L. L. Wilder, and W. Somervell.

MEMPHIS, *October 18, 1914.*

Hon. K. D. McKELLAR, *Washington, D. C.*

MY DEAR McKELLAR: On yesterday we had a conference of governors here. Six States were represented. The cause of meeting was the cotton situation. They did just as nearly nothing as could have been done.

When this trouble first came I thought the fact that the whole South was involved directly and our whole country indirectly that surely something would be devised to remedy the conditions that are rapidly growing worse. Cotton has sold here in last week for 6¢, and in Mississippi County, Ark., for 5 cents, and in South Carolina as low as 4¢. This is bad, but even at these prices it is salable only in small lots. Our paper will show you on cotton page how the stock of cotton is piling up here. Emerson says that a monarchy is like a ship that is either well or poorly manned. It sinks or makes port, as the case may be. That a republic is a raft that can not sink, but it keeps one's feet wet all the time. This comparison has occurred to me frequently of late. I understand that England is having her mills use Egyptian cotton and has passed laws for Egypt cutting down acreage next year 50 per cent. If this is needed by a country that only grows 1,000,000 bales, where will we be if something is not done?

If the United States Government could have seen its way to lend directly to the producer and take, in addition to the note for loan, an obligation that would reduce cotton acreage next year, I feel sure the condition here would have been quite different. For example, say that I should have presented warehouse receipts for 100 bales, upon which $4,000 was loaned. I would also give an obligation in the sum of $4,000 that in 1915 I would only plant 50 per cent of my present acreage in cotton, and let this obligation be a first lien on my crop wherever grown. In this way there would be a reduction by contract, and thus avoid all questions of legislative reduction. Again, the merchant or banker who supplied me next season would know that my reduction obligation was a first lien and that for his supplies he could only have a second lien, and so he would see that all of his customers complied with their obligations to reduce.

In years gone by in time of panic our Government has gone to the help of Wall Street. It donated liberally to San Francisco, and did the same to care for flood sufferers in the Mississippi Valley and around Dayton, Ohio.

I firmly believe that something must and will be done sooner or later at Washington, but the great pity is that whereas what is done now will help the producer directly, what may be done later will help him very much less and when he is less able to help himself than now if some value could be given to his crop. Of course, many of us will be able to push along in a limping way or be sold out, as the case may be, but there are hundreds of thousands of good people who will be, and are now, in a fearful condition, both for the balance of this winter and next year.

It seems that Mr. McAdoo thought the banks should do the helping. Take this city; 2,000,000 bales of cotton are produced within a radius of 135 miles of Memphis. If Memphis banks had tried to take care of 500,000 bales, or one-fourth, it would at 8 cents have required $20,000,000; far more than our banks could have borrowed, even if it had been wise to do this on four-months' paper. This crop in this section has cost not less than 8 cents to produce it. The cotton factors and banks here already have large sums out for the making of this crop.

I understand a few days ago a man who had warehouse receipts for 15 bales of cotton was unable to secure a loan on this from the banks that he applied to, and finally a cotton factor told him that he would lend $15 per bale, or 3 cents per pound, provided he was at liberty to sell the cotton speedily and not hold it. The cotton crop is the one crop that each year has put the balance of trade in our favor, and why there is any sound financiering in forcing the South, and thus the United States, to lose at least one-half of its value I can not see.

A few days ago I saw in a paper that Sir Charles Macara, chairman of the British Master Spinners' Association, stated that it would be well for England to join the United States and with a fund of $350,000,000 buy up enough cotton to adjust values and hold it against years when a short crop might make a shortage of cotton for spinners. I see no objection to this, but the delay is what is going to do so much harm.

I have written you a ream, but I suppose you have similar letters from others in your district.

I would appreciate it if you would drop me a line and give me the benefit of your information on this subject. With best regards,

Yours, truly,

LEM BANKS.

—

MEMPHIS TERMINAL CORPORATION,
Memphis, Tenn., October 19, 1914.

Mr. K. D. McKELLAR,
House of Representatives, Washington, D. C.

DEAR MACK: My trip to Washington clearly convinced me my idea of the Government financing the cotton situation had no standing whatever with the administration. However, day by day since then I have seen the financial lines drawing the situation nearer and nearer to disaster.

I have just returned from W. A. Gage & Co.'s office. Mr. Gage told me that Mr. Reed told him Saturday he would not take cotton—I suppose middling average—at 3 cents per pound as collateral. This commodity has cost the South 8 to 9 cents per pound to raise, and, in my opinion, if there ever was in the history of this Nation a time that needed legislation for the protection of her people, certainly that time is now.

Mr. McAdoo can hold to his idea of making the banks shoulder this burden, but he has been unable to accomplish anything so far. I believed he was wrong when I was in Washington, and to my mind the situation has proven it beyond a doubt, and that you Congressmen and Senators from the cotton States should do something on the situation before Congress adjourns. If you do not, I am afraid it will be too late when Congress convenes again to do anything much for us.

I now understand there is a possibility of the pool of the $150,000,000 not going through. I do not know for a fact, but my information of the cause of this was too much red tape at Washington.

Unless the Government comes forward and does something to relieve the situation, I believe this cotton crop will sell for 5 cents or less. The situation looks far more worse than when I was in Washington, and I now believe it will require a pool of $300,000,000 to restore cotton to a price of 8 cents or better. I do not think it would be necessary for the pool to warehouse $10,000,000 bales at $30 per bale, but to give any strength to the situation they would have to be in a position to do so if necessary.

My advise is try and do something before you leave Washington, for when you get here and get a good case of the blues with the rest of us you will certainly not be in a position to enjoy your vacation.

Can you not use Sternberger's plan, so far as advancing the money to the States on their bonds and then the State treasurers loan direct to the owner of the cotton. In that way you are able to reach the little man. I believe the southern people are closely approaching a point where their legislators will be called upon to do something with the situation.

As matters stand at present there is a billion and one-half, if not more, of debts awaiting to be paid out of $300,000,000 which is about to be lost on this crop, and the South is not the only one going to get hurt if the $300,000,000 is lost.

Yours, very truly,

B. L. MALLORY.

P. S.—The S. O. S. signal can be heard in every direction. Do you think any chance for help?

The Philippine Islands—Ship-Purchase Bill.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 1¼, 1914,

On the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands.

Mr. BRYAN. Mr. Speaker, the ship-purchase bill now pending on the calendar provides for possible trade on the ships to be purchased with the Philippine Islands, and while these comments are more especially designed as a reference to the ship-purchase bill and not to Philippine Island trade, still I consider the subject near enough related to associate what I have to say with that subject and extend, under the general permit as was provided for under that rule for the consideration of that bill.

The ship-purchase bill has been reported on favorably by the Committee on the Merchant Marine and Fisheries, of which I am a member. It provides for the creation of a corporation, to be owned by the Government, to engage in ocean shipping and passenger traffic. The bill provides that 51 per cent of the stock shall be owned by the Government, and private parties shall have the privilege of owning 49 per cent. It is generally conceded that the Government will own all the stock, on the ground that no private party will care to enter into a partnership of this kind. The seeker after dividends prefers a Morgan or a Rockefeller as a business partner to Uncle Sam. This is very natural, and it is devoutly to be hoped the situation in that respect will remain unchanged.

It is said that President Wilson is supporting this bill, and it is freely predicted that it will become a law during the December session. The bill ought to have the support of every patriotic American citizen. It is the most hopeful piece of merchant-marine legislation that has been presented since the days of Thomas Jefferson. It is not only designed as an opening of the way to a real American merchant marine, but it should give hope to the merchants, the manufacturers, and the laborers of this country who look to export trade for their happiness and prosperity.

The passage of this bill will throw open wide the door left ajar by the passage of the Alaska railroad bill. The United States Government has spent tremendous sums in surveying the coast, in locating the dangers to navigation and in marking them, in establishing lighthouses, in improving the harbors, and in all kinds of aids to navigation. Marine officers are licensed and hulls and boilers are inspected. Large sums of money are spent to safeguard the lives of those who go down to the sea and to protect the shippers and the shipowners from loss. Specially equipped boats stand by to aid vessels weather the storm and succor the distressed, and the Navy is kept in readiness to protect the commerce of the sea from any kind of hostile attack. All this is done at public expense. But when it comes to collect the fares or whenever any revenue is coming in it always goes into private pockets.

There is no class of money makers that have been given such a free hand as the shipowners. They shift from flag to flag and demand privileges of every kind. The mere fact that in case of war they may be needed as transports is made a pretext by them to force terms from the Governments of the earth. Ocean shipping is run on a profit basis. Love of flag has no more part in the consideration of a ship-owning company than the latest Parisian styles have at an Igorot festival. It is not a matter of flags, it is a matter of gold. It is not a matter of form of government, it is a question solely of financial returns. They want the cheapest labor and the conditions which will promote dividends, not standards of humanity. To escape liability they will buy an unsafe boat and then form a corporation, giving the corporation the name of the boat, seeing to it that the only property the corporation owns is the boat. They then insure the vessel and put a crew on board with a cargo of freight. If the boat goes down, they collect the insurance, and by outrageous liability laws are permitted to pocket the money, and when the dependents of the outraged crew file their claims and the owners of the cargo demand reparation, they get from the shipowners an "I should worry" for their pains.

Notwithstanding all these aids to navigation by public expense, notwithstanding the freedom from restraint with which the open sea and the rivers and other waters are given to these interests, still they are ever complaining, always wanting more freedom. They want to escape every American requirement as to labor. They want permission to make unconscionable contracts, and then they want United States marshals to arrest any one of their workmen who quit for a better job. They demand the right to violate liquor and gambling laws by operating on practically all of their vessels grogshops and poker games for those with big rolls and crap games for the crew. I do not mean to indict or berate all of our ships, but I want to impress the fact that they are unregulated. They know but little law, and they are ever seeking to throw off the few restraints established.

Our America shipbuilders say they can not build ships in this country as cheaply as they are built in foreign yards, and that the shipping men will not patronize them on this account; so they procure from Congress a law that no foreign-built ship can carry coastwise traffic. Then the shipowners say the foreign vessels are willing to carry freight from point to point on the coast so cheaply that they can not compete and make any money; so they get Congress to pass a law prohibiting foreign vessels from carrying freight or passengers from point to point in coastwise traffic. Then these coastwise steamers, with their gigantic monopoly of coastwise traffic, see the construction of the Panama Canal and have tendered them a new traffic from ocean to ocean of immense tonnage—all foreign nations shut out, and the entire monopoly of the traffic in their hands. The people build the canal at public expense, and these coastwise shipping monopolists procure the passage of a law giving them free use of the canal, while all other ships were required to pay tolls.

Growing with gigantic strides the great coastwise shipping interests and the great railroads of the land are found to be all Morganized together. The same men who own transportation agencies on the land own them on the sea, but where some great undertaking is required like a Panama Canal, a Mississippi River improvement, an inland waterway, the people generally, the taxpayers, the eaters of bacon and beans, the buyers of clothes and of the plainest and simplest of manufactured articles, are compelled to throw in a widow's mite on every pound of edibles they buy and on every article they use till $400,000,000 is raised, and the canal is built or similar sums are raised for other improvements. As the laborers work in the factories, the farmer tills the soil, the miners go down into the earth, and the builders mount their scaffolds, these transportation men demand their toll from all.

No laborer can lie down on a bed to rest till he contributes to the dividends of these transportation men, this Morganized group who cover the land and the sea. As the laborer sleeps to gain renewed tissue and strength of body and limb for the next day's work the shingles in the roof over his head, the lumber in the walls which protect him from the weather and the dangers that lurk without, have been made a source of dividend to the magnates and stock gamblers who revel and command. Every mouthful that he eats of his humble meal in the morning—which he has not produced at home—has been levied upon by the Morgan crew, and the beans and the bacon

his good wife puts in his dinner pail have all contributed profits to New York bankers and to men who bear and bull the stock market.

And so in every walk of life. The rich and the poor are assessed by this Morganized transportation interest. The Government exempts certain property from taxation—the churches and charitable institutions—but not so with the shippers. No gasping invalid can have a taste of refreshment till the freight, both expense and profit, thereon has been paid. The Morgan right in the pulpit behind which the preacher prays must be paid in advance.

Those who hold the transportation agencies of the land in their grasp have a cinch. They are not middlemen. They are all-over men. They are on top and under, in, out, and everywhere. They have taken away from the people billions and billions of their wealth in this land and have produced nothing in return. They have carried people and things. Transportation is their finished product, like the carrying of the mails is the only function of the Post Office Department. The post office takes no profit, demands no toll, but the transportation interests, not content with profit, demand and take unlimited loot. They have robbed and despoiled the people of inestimable wealth of public domain in the West. The New Haven reeks with fraud and the Rock Island has been one huge agency to despoil the people. The same story is told in all the railroads, and the story of transportation by water is worse. Ask the steamships for a freight rate to Alaska and see the hand of Guggenheim and Wall Street and Morgan demanding the toll of a heartless ogre. Try to ship lumber from Puget Sound to Australia, to Mexico, to South America, to coastwise points, and report what is the toll of profit demanded. Go on the proud vessels that fly the American flag in our coastwise traffic and see if our coastwise Morganized steamship men are hiring American sailors or orientals. Investigate the contracts for labor and see if they do not consider the dollar before they do the man. In most significant irony fate has named the principal ship owned on the Pacific "Bob Dollar," and I must admit he is a pretty good Bob as Bob Dollars go, for a' that.

The point I am trying to impress with all possible earnestness is a deep-seated conviction with me that private individuals have no right to levy dividends on transportation; that transportation is a governmental function. To all those seeking transportation subsidies, freedom from ordinary charges, land grants, or governmental aid I would say, "You are out of place in the transportation business; go and produce something. The Government will see that your product is conveyed to the consumer for absolute cost."

I hold that the transportation toll taken is a barnacle on labor and industry, and I want to knock that barnacle off; and I would like to copper cover and red ocher the spot, so that another such growth is impossible. The product of labor should be carried to the consumer at cost. If there is any profit, it should all go to the producer, the brain and the brawn that created it. The fight to bring about this condition will be the economic Armageddon of the immediate future. Other economic issues are going to fall into insignificance compared with this issue.

The railroads take nearly a billion dollars a year from industry and labor for interest and dividends, and the steamships take a vast additional sum. Louis Brandies says a million dollars a day could be saved in railroad management. There is no doubt of the truth of this when you consider the stock-jobbing, as well as the useless offices and the duplications of officers and all kinds of expenses, that would be avoided if the Government owned the railroads in one great monopoly. Two million dollars a day would be saved to labor and industry from the very start.

I am enthusiastically for the ship-purchase bill now pending, because I want the Government to own all the coastwise traffic and collect the revenues therefrom as well as to own the Panama Canal and pay the expenses thereof. I want the lighthouses and the buoys and the bells and the submarine signals to be paid for by the traffic that is guided safely into port by them. I want the hulls that are inspected by the Government to be owned by the Government, and the sailors and the officers on the merchant vessels that steam and sail over the watery right of way of all the people to serve the people, and not the Morganized interests on Wall Street. I want necessary improvements of the harbors made and the necessary canals dug, but I do not want them used as a means of creating parasites on labor and industry—men to stand at the wharves and docks of the land and say to labor and to industry, "You have got to share with me or you lose all you have produced." Harry Thaw could own a steamship company—and he may for all I know—why can not the United States Government? They say that widows and orphans owned most of the New Haven & Hartford.

When we join in the lament—and it is lamentable—that the American merchant marine has been driven from the high seas these Bob Dollar knights of Neptune say:

"Well, I told you so; Japan and Belgium use coolie labor and lascars, but you do not want us to do that. Why do you not repeal statutes as to labor standards?

"Public opinion frowns on arresting sailors for deserting a merchant ship for a better job; do you not know that tends to abridge profit making?"

"You will not make the people pay us a few millions gold for subsidy. Do not you know that causes us to put our money in foreign ships?" They cite one instance, the Pacific Mail Steamship Co. It is stated that the gross earnings of this company in the last 36 years have been $150,596,000, and the net earnings $15,259,000. I suppose the net earnings allow for a liberal charge off for depreciation and all interest on investment. I do not know the basis of the figures and can not vouch for their accuracy. I get them from the Pacific Marine Review, a very reliable publication. The citation, however, does not go into details, and the bookkeeping methods by which the figures are arrived at are uncertain. The profits do not seem very alluring, but the concern is owned by the Southern Pacific Railroad and has, no doubt, found substantial business reasons for standing by the flag and the traffic. I also learn from the Pacific Marine Review that the Pacific Mail Steamship Co. was about to build four large passenger liners at a cost of $3,000,000 each for the traffic between San Francisco and New York when the Panama Canal act, prohibiting railroad-owned boats from going through the Panama Canal, interfered.

Some who oppose the ship-purchase bill say it will bring on international complications. They base this argument, first, on the story of the proposed purchase of certain German liners, and, second, they say our vessels in foreign ports would stir up rivalry and complications between the nations. As to the first proposition, it is unworthy of consideration, for the corporation to be formed does not need to purchase the German liners, and President Wilson would not stand for their purchase unless they are greatly desired, and we are strictly and unquestionably within our rights in so doing. I think the second argument is extremely absurd. It is, in substance, that Japan, England, Germany, and other nations may subsidize their merchantmen by tremendous payments annually in gold and send these vessels into the ports of the world and permit them to run our merchantmen off the seas by underbidding and by cutting freight rates, which they are able to do because of the Government subsidy, and that we can not take exception to that; but that if a merchantman owned by this Government should go into a foreign port and take on a cargo, that rivalries would at once ensue that might result in war. So they say pay us Morgans $2,000,000 a year gold and let us pocket that as profits, together with the substantial profits we are already making, as illustrated in the $15,259,000 profits of the Pacific Mail Steamship Co., already referred to, and we will edge in on the foreign nations and take the trade from their subsidized vessels, and, lo, we steamboat owners, we Morgans and Rothschilds, will all lie down in peace and brotherly love together. That does not appeal to me at all. Merely to state it is to refute it. Are we a Nation of imbeciles and cowards? Is it possible we are afraid to take our own goods to market in our own delivery wagons and bring back what we want in the same conveyances? Are we like the major in the Civil War who said to his men, "Boys, the enemy is in sight coming over the hill yonder; they are fresh troops and we are tired; there's two of them to one of us, and I order that you fire two or three rounds and then run; as I am a little lame, I'll start now"? When we get into that frame of mind we will not last long as a Nation. We are a long way from that now.

SOUTH AMERICAN TRADE INVITES US.

So far as the trade argument goes, to me the South American trade is the most alluring. I will not attempt to go into details, but there is presented to us now the golden opportunity of all the years of our existence to bind ourselves to South America by establishing trade relations and monetary exchanges that will do more to protect and make effective a real Monroe doctrine or Pan American Union than can be accomplished by diplomacy and peace treaties, howsoever skillfully negotiated or planned. We have no steamship routes to and from South American ports to speak of. Steamship companies will not go there ahead of the trade, and the trade will not come ahead of the transportation facilities. The Government can afford to make calls at a line of South American ports with her own first-class merchantmen for a year or more at a loss in order to get that trade and establish the healthful commercial and political relations that will necessarily be associated. One line should run from Seattle south and one from New York south. The Panama Canal Zone should provide a free port at each

end of the canal for the transfer of merchandise. With our boats into South American cities should go our bankers, and under the provisions of the new banking act new exchange arrangements should be perfected. Goods should be transported at cost, based on the time when we will have full cargoes. Nobody will object to such a concession as that to an infant trade route by the Government, but they will not consent to give $2,000,000 a year to steamboats in cash subsidies. Will such vessels go on runs where we are trying to build up trade? Not at all. Let us knock off of transportation the parasites that suck the blood out of industry, that take from labor its just reward for its product. The merchant in our cities has a free delivery wagon and he goes into the byways with the goods he has sold, and so we must get into South America. I am tired of talking exclusively of tariffs to protect us from the foreigner. I want us to get to work and make our money selling to the foreign trade. They have talked for protection against German goods, and prayed for a wall of protection against foreign imports. They certainly have protection to-day. No danger from Germany or the pauper labor of Europe now. What good does it accomplish? The trouble is that labor is ridden to death, and its energy is consumed by such parasites as the shipping interests who never produce anything. Let us get transportation down cheap like postage.

I shall not attempt to detail the South American situation. It is the demands of South America that appeal to me most. I want us to maintain close relations with Australia and New Zealand and with our own possessions in the Pacific, but the great demand of the present lies to the south. I shall insert here a statement from John Barrett, of the Pan American Union, which sets forth the details of the South American situation:

THE SOUTH AMERICA-UNITED STATES SITUATION AS AFFECTED BY THE EUROPEAN WAR.

As the executive officer of the Pan American Union, the organization of the American Republics devoted to the development of commerce, friendship, intercourse, and good will among them all, I appeal to the banking, shipping, manufacturing, exporting, and importing interests of the United States to give at this moment every possible aid and attention to the critical South American situation brought on by the European war. I also ask the newspapers, in both their editorial and news columns, to give all publicity possible to this matter, so that their constituents interested in this situation may be informed of their responsibility and opportunity.

While everybody must profoundly regret that a condition of war and the sufferings of European nations engaged in a great conflict should in any way be exploited for the selfish gain of the United States, its business interests have a duty and responsibility in this crisis which must be met, even if it may bring them vast material benefits. Looking at the situation in a thoroughly unselfish way, it presents demands upon the United States from South America which can not be neglected, but which, if responded to in the right spirit, will be enormously beneficial to South America and the United States alike. The problem divides itself into four heads—imports, exports, ships, and loans.

SOUTH AMERICAN IMPORTS.

All South America is an enormous purchaser of the manufactured products of Europe. A large portion of this supply will be shut off during the next six months, and possibly during the next year or two if the war continues. As many South American countries depend largely upon Europe for their absolute necessities, and a major part of these orders are placed but a short time ahead because of the excellence of the regular shipping facilities, they are now face to face with an immediate famine in the articles which they most generally import. According to the latest available figures collated in the Pan American Union, the 10 South American countries—Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela—annually import products valued at $961,000,000. Of this there come from Europe products valued close to $660,000,000. While Great Britain supplies products of this total to the value of approximately $273,000,000, Germany, which is completely cut off by the war, supplies $180,000,000; France, $84,000,000; Italy, $54,000,000; Belgium, $47,000,000; Austria-Hungary, $8,000,000; Netherlands, $8,000,000; Switzerland, $6,000,000, and other European countries lesser sums. For comparison it can be stated that the average imports from the United States of these 10 countries of South America amount to approximately $155,000,000. Bearing the fact in mind that the commercial relationship of South America and Europe has been so well organized and systematized that 75 per cent of these imports are only ordered about a month or two months ahead of their delivery, it can be realized how soon the present supplies on hand in South America will be exhausted, and that she must depend upon the United States to make up the deficiency. If the United States manufacturers and exporters will exert every effort to supply this emergency demand without increase of prices or unnecessary delay, they will accomplish great permanent good for themselves and the South American business interests alike.

SOUTH AMERICAN EXPORTS.

The same compilation of figures shows that South America annually exports to foreign countries products valued at approximately $1,177,000,000. Of this total nearly $700,000,000 go to Europe. Of these products Great Britain takes approximately $270,000,000; Germany, $157,000,000; France, $104,000,000; Belgium, $60,000,000; Netherlands, $44,000,000; Italy, $27,000,000; Austria-Hungary, $22,000,000; with the remaining amount divided among different countries.

For comparison it can be stated that these 10 countries of South America export to the United States annually products valued at approximately $250,000,000.

With, therefore, their principal markets for their raw products temporarily closed against them, these 10 countries are looking for a place to dispose of their accumulating stores, and if the importing interests of the United States, including the manufacturers of raw material, can relieve the situation by increasing their purchases they may save the South American business interests from a financial crisis.

SHIPS FOR THE SOUTH AMERICAN TRADE.

As nearly 90 per cent of the exports and imports of these South American countries are carried in German, British, and other European bottoms, which are now withdrawn from the sea, all of their principal ports, like Rio de Janeiro, Montevideo, Buenos Aires, Valparaiso, Callao, and La Guaira are in a state equal to that of a formal blockade. The majority of these vessels will be absolutely unable to operate for many months, and possibly for several years, unless the situation is quickly remedied. There is no limit to the sufferings that will come to these countries and ports if their facilities for sending out their exports and bringing in the necessary imports are cut off. In this crisis it is to be sincerely hoped that the bill now being passed by the United States Congress may be of great assistance in relieving the situation. That, however, can only point out the way. There must follow the placing upon the high seas to operate between the United States and the principal South American ports a fleet of vessels flying the American flag, and this can only be done by United States companies taking advantage of this act of Congress and carrying out the provisions of this bill.

NATIONAL LOANS.

Just as war was declared several of the principal countries of South America were negotiating loans in the European financial capitals. These loans are inspired by the pressure of local conditions and are absolutely necessary for the welfare of countries concerned. For the present and probably for a long period it will be impossible to float such loans in Europe. Under the circumstances these Governments will naturally turn to the banking and financial interests of the United States, which heretofore have seldom subscribed for South American loans or shown much interest in them. By endeavoring to help out these Governments in this crisis they can not fail to perform not only a great service to such Governments, but place themselves in a favorable position to obtain other loans in the future and favorable consideration from the Governments concerned.

In conclusion, it is gratifying to state that the Department of Commerce of the United States with commendable energy has already started an organization to relieve this situation, but far-reaching results can only be accomplished by the direct action and interest of the entire financial and commercial interests of the United States, and if the Pan American Union can give any information which will be helpful to those who may be interested it will be glad to supply all the data within its power.

GOVERNMENT MONOPOLY FEARED.

They say, "Once start the Government into ship operations and we will soon have a Government monopoly." Good! God speed the day. I am in favor of the pending bill for the very reason that it opens the way to a governmental monopoly of American shipping. The proponents of the administration measure do not suggest their approval of a Government monopoly of any class of shipping. They favor this only as an emergency measure, and hope to go out of the business and dispose of the ships as soon as the immediate emergency has ceased to exist. My views are embodied in House bill 18313, introduced by me before the pending bill. My bill provides for the Government acquiring such ships as are necessary to take all offerings of freight and passenger traffic on the Great Lakes, the coastwise trade, and South and Central American export trade, and to prohibit any vessels hereafter built or registered under the American flag to enter into the coastwise trade. Of course, under a statute of that kind it would not be many years before a Government monopoly would be an accomplished fact. I should delight in that result; but that is not contemplated in the administration bill. Still the shipowners generally are vigorously opposing this bill, although it especially exempts the vessels from the coastwise trade. They will go into South American trade and in the trade with our insular possessions and the foreign trade so far as deemed advisable. I shall here insert a portion of an article from the Pacific Marine Review. Under the heading, "It could not go further," the Review, after copying a portion of my bill (H. R. 18313), says:

We do not think there is any imminent danger of this bill getting anywhere, but it is highly interesting as it discloses the result of a certain method of reasoning now prevalent among a fair-sized minority in both Houses of our Government. It is absolutely certain, however, that the passage of any measure looking to the entry of the Government into the steamship business must eventually be carried to an absolute monopoly or else fail miserably.

If a Government line is started, it will not pay, and the Government, in its efforts to vindicate its business sense, will set up a monopoly and make the business pay at all costs. There is only one basis upon which to build up an assumption that Government ownership of merchant vessels, either as a monopoly or in competition with private concerns, will prove a financial failure, and that is the result of past performances along this line. If the proof of the pudding is in the eating, then it is true that the English people, having built up the greatest merchant marine in the world, know as much about steamship operation as any nationality on earth. Every effort made by English Governments to operate state-owned ships on commercial routes has proven as absolute failure. As long as shipping questions in this country are, as far as Washington is concerned, purely political in nature we will have no foreign-trade merchant marine. Should the present Democratic administration succeed in establishing a Government shipping monopoly, the next Republican administration would take a keen delight in destroying it in the sacred names of patriotism and party politics.

Were you ever in a city election to purchase the water or light plant? If you were, then you have heard this over and over again: "It can not possibly pay; past experience has proven that fact." They say Germany is losing money on the state-owned railways, but the fact is far different. I do not know about English experience, referred to by the Review. The statement may be correct, but we are not talking about England, but about the United States. If these vessels will not pay in

the foreign trade we can use them in the coastwise trade. The United States is not without experience along this line.

THE PANAMA RAILROAD'S EXPERIENCE.

The Panama Railroad Co. is a corporation entirely owned by the United States Government. The Panama Railroad Steamship Line is a department or subdivision of the Panama Railroad Co. Under this arrangement the Government is now operating five steamships—the *Ancon, Colon, Panama, Allianca,* and *Advance.* The *Cristobal,* which the company has been operating has been turned over to the Quartermaster's Department to bring home American tourists from Europe. The story of the operation of these vessels is a long one and rather complicated, but the facts so thoroughly refute the silly and absurd claim that the Government can not operate a steamship line as well as widows and orphans, and Kittie Greens and Harry Thaws, acting through a Morganized syndicate that stays up nights devising schemes to New Haven the treasury and Rock Island the earnings that there is nothing left to be said.

When the Government acquired this company and went into the ocean traffic between New York and Panama certain conditions existed which have since then been changed, solely on account of activities of the Government line. For instance:

The rate was $8 per ton. The Government line reduced it at once, and still maintains it, at $3.50 per ton on rough goods and $4.50 per ton on general cargo, an average reduction of 50 per cent. Not so bad for America against Morgan for a starter.

Points contiguous to the Canal Zone were paying the $8 per ton rate when Uncle Sam began business. The private companies at those points where our vessels do not compete directly have come down to $6 per ton, a 25 per cent reduction. In this they follow the Jim Hill philosophy of "all the traffic will bear." If they held it up at $8 shippers would consign their freight to the Canal Zone and then reship. It will hardly pay to do this on a $6 rate.

But in addition to this low rate for the public, Uncle Sam has been getting the benefit of practically free transportation for canal employees to and from the Canal Zone, these vessels charging $20 and $30, as against a $75 rate prevailing on all other lines, and on freight for canal construction, supplies, and so forth, Uncle Sam was charged so law a rate that his freight bill was only 17.60 per cent of the company's freight revenue, although his freight constituted 82.40 per cent of the tonnage carried. This represents a tremendous saving. A private shipowner would have made enough out of this one feature to have endowed a daughter for marriage to a foreign count.

But these are only slight intimations of the savings made by Uncle Sam, this incompetent old fool, if you would believe the lovers of the looting system, the subsidy seekers, the sure-thing gamblers. Look at this, and if this does not make the scales drop from some of your eyes, then there is no use trying. Remember, we want to get into South American trade, and in order to do it we have to compete with Europe.

Now listen, when Uncle Sam went into this steamship side line, the rate on high-grade cargo, such as laces, ribbons, silks, and so forth, was $9.94 (nine gold dollars and ninety-four cents) higher per ton form the United States to Central and South American ports than from Europe, although the distance was 1,000 miles less. On cotton goods, domestics, linens, and so forth, the rate was $7.39 per ton higher; on canned goods, $9.82 per ton higher; on edible cargo, such as crackers, meal, flour, sugar, and so forth, $3.82 per ton higher. On shipments of clean coffee from these ports the rates to the United States were $3 to $3.80 per ton higher than to Europe, 1,000 miles farther away; on sugar, $5.43 higher; on hides and skins, $13.30 per ton higher. What do you say about that? You laboring men who want to have your product sold in South America, so as to increase the demand for American labor, and you manufacturers, how do you like to be held up by a Morganized parasite, that only smokes good cigars, rides in yachts, and marries his sons to actresses and his daughters to foreign counts? The influence of the Government in the operation of these ships adjusted these rates in the main.

I am under obligation to Mr. E. A. Drake, vice president of the Panama Railroad Co., for much of the information I have gathered on this subject, and I cheerfully acknowledge that fact.

I can not go further with this at this time. I will have more to say when the measure comes up for debate, but it does make me want to fight to read from these privilege seekers that the United States Government can not operate a steamboat. This Congress has been wonderfully progressive, but there are some more big things to be done, and I hope the passage of the ship-purchase bill will be accomplished, because I think it will in itself accomplish wonders and, above all, that it will open the door to the accomplishment of much greater things in the future.

Some of the Great Accomplishments of the Treasury Department During the Present Administration.

EXTENSION OF REMARKS
OF
HON. MICHAEL F. PHELAN,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 15, 1914.

Mr. PHELAN. Mr. Speaker, Since President Wilson was inaugurated on the 4th of March, 1913, the continuous session of Congress, which is without a parallel in the history of the country, with all the important legislation which it has been considering, the Mexican trouble, the war in Europe, and the many other matters of great public interest which have been discussed have so absorbed the public mind that altogether too little attention has been given to the high efficiency, to the progressive development, and to the remarkable accomplishments of the various executive departments of the Government under President Wilson's administration. I regret that I have not the opportunity to say something about all these departments.

I should like to speak of the extraordinary showing of the Post Office Department, which completed the fiscal year ending June 30, 1914, with a surplus of $3,800,000, compared to an apparent surplus of $219,118.12, which in reality should have been a deficit of $732,301.90, under a Republican administration in 1911; which has steadily and speedily extended the parcel post by transporting larger parcels, by transporting produce direct from the farmer to the consumer, and which has in many other ways provided greatly increased postal accommodations for the people of the country.

A whole speech might well be devoted to the great service rendered trade and commerce by the Department of Commerce under Secretary Redfield, and of the great impetus he has given to the development of our foreign trade; of what Secretary Lane, of the Interior Department, has done for conservation, for the development of Alaska and of our public lands and water power, in the extension of the work of the Bureau of Education, in the Pension Bureau; of the great work done by the Attorney General for the preservation of fair competition in trade and the prevention of monopoly; of the extraordinary achievements of the State Department in securing a score and a half of peace treaties with the nations of the world, and its cooperation with President Wilson in his great statesmanship in handling the Mexican affair, and in averting trouble in the present crisis of war in Europe; of the rapid extension of service to the farmer in the Agricultural Department, as, for example, the inauguration of an Office of Markets as an intelligence bureau for the rural public as well as the public at large; of the high efficiency of the Department of Labor and its great aid by its cooperation in the enactment of the great labor program of the present Congress; of the brilliant successes of the Navy Department in breaking the Steel Combine's monopoly over armor plate, projectiles, and structural steel used by the Navy, thereby saving the Government $1,000,000; in providing a means whereby boys entering the Navy may learn trades according to their choice; of the introduction of the system whereby ordinary seamen may receive promotions, be allowed to enter the Naval Academy at Annapolis, and become officers; of the great economies in the War Department, even under extraordinary conditions, and of the efficiency and capacity of this department under the trying conditions during the trouble in Mexico.

I intend, however, to speak of the almost unparalleled success of the Treasury Department in the administration of this complex, trying, and difficult branch of our Government. With the possible exception of the State Department, the Department of the Treasury is the most important Cabinet office in the Government. During the past year and a half of President Wilson's administration the Secretary of the Treasury has had more business to do, has had more perplexing problems to deal with, and has had to meet more difficult situations than any other Secretary of the Treasury since the Civil War. The masterly manner in which he has handled every situation, in which he has solved every problem, in which he has administered the business of this all-important Government office, has been such as to compel universal admiration.

Let us examine some of the things which he has done since he took this office and consider whether or not I have not spoken with reference to this work within the bounds of moderation.

Almost at the beginning of his assumption of his office, the banking and currency act came up for consideration before the

Committee on Banking and Currency. As a member of this committee I was in a position to know something of what was transpiring during this period. It is a well-known fact that the big banking interests of this country were bitterly opposed to the passage of the bill which was ultimately enacted as the Federal reserve act. With the tremendous power over money and credit which these financial interests held they were in a position where they could contract credit and thus embarrass the administration by depressing business. There are sufficient facts on record to demonstrate that in the summer of 1913 there was something more than a suspicion that they did wield their power to bring about contraction and stringency. The Secretary of the Treasury met their move without hesitation and without vacillation. He acted with the utmost promptness and with unfailing courage and prudence. When announcement was made that financial stringency threatened, he immediately announced that there were $500,000,000 of bank notes in the Treasury, the whole or any part of which he was ready to put in circulation without delay upon application, accompanied by the deposit in the Treasury Department of commercial paper or other proper securities. The financial distress which had threatened disappeared overnight. Within 24 hours big banks in the country made public announcement of their readiness to extend loans, and subsequently did extend loans, and conditions became normal again. Thus the Treasury Department by promptness, by courage, and by a wide-visioned conception of conditions met successfully a problem which for the moment threatened serious trouble.

Subsequently, in the fall of the same year—1913—when the time for crop moving approached, the annual stringency and contraction which appears at this period of the year seemed imminent. At an early date the Secretary of the Treasury announced that he had $50,000,000 of Government funds which he was ready to deposit in banks in any section of the country where needed, with particular reference to the rural sections—the Northwest, the West, the South, and the Southwest. Although every demand was met, the actual amount needed and deposited was $37,386,000. The crops were moved without the usual annual drain upon the banks in the financial centers, particularly in the East. There was an absence of the contraction in the East and the North which had been anticipated with apprehension, and these sections of the country were benefited by the absence of a contraction of loans and credits, while the rural sections had currency in sufficiency, although the crops were extraordinarily large.

An innovation of the Treasury Department was that inaugurated in June, 1913, when banks were required from that date onward to pay 2 per cent interest on Government deposits. Individuals had been getting their 2 per cent interest on deposits from the banks, but the whole people of the country, as represented by the Government, had been allowing the banks to receive their deposits and profit from them without paying anything for the use of the Government's money. The banks were getting the use of the people's money free. With the exception of what were known as inactive accounts, which received 1 per cent interest and which were a comparatively small item, no interest had been paid upon Government deposits. During the first year in which this interest has been required from the banks by the Treasury Department the Government has received an income of $1,400,000 from this source. In the previous five years, under Republican administration, the total amount received for the five years was only $715,000. Thus the Government has lost millions of dollars by the failure to charge interest on deposits, and the action of the department under this Democratic administration means the addition of millions of dollars in receipts.

The most striking demonstration of the extraordinary capacity of the Secretary of the Treasury to administer the financial affairs of this Nation has been made since the 1st of August this year, when the colossal war in Europe suddenly and unexpectedly broke out, causing an upheaval in the commercial, industrial, and agricultural conditions all over the world. The United States, in common with every other civilized nation in the world, was vitally affected, with hardly a moment's notice. Millions of dollars of American securities owned abroad were dumped upon our stock market, producing a situation little short of panic. Necessarily the stock exchange was immediately closed, and has remained closed ever since, an extraordinary and startling event. For a short period international commerce was almost entirely suspended, and up to the present date has been curtailed to an alarming degree. Trade and business and agriculture have been tremendously upset all over the Nation. To no part of the business of the Nation has the shock been greater than to the financial organization of the country. The earthquake, which had shaken the whole world to its very foundation and whose shock was felt with such tremendous force in the United States, threatened the stupendous financial structure of this Nation, upon which all the business of our vast country rests. The most profound alarm and apprehension seized the great financial leaders in the business world. Men familiar with the situation dreaded a colossal panic and financial disaster such as the Republic had never before experienced.

It was an appalling crisis, which demanded from the Secretary of the Treasury a combination of qualities which are seldom found combined in one individual. That Secretary McAdoo possessed this rare combination events have already clearly proved. He met the crisis with extraordinary promptitude, with aggressive courage, with vast resourcefulness, with prudent foresight, and with a cool confidence which was contagious and which of itself did much to allay dread.

At the beginning he secured the active cooperation and complete support of President Wilson who, in this financial crisis as in every crisis he has to confront, has been the masterful statesman, dominating every situation, guiding and directing the Nation's course along the one path to safety and security, a leader providentially vouchsafed the Nation in this time of danger and peril.

The first thing which had to be done was to provide sufficient currency to meet the demands of business. The demands of foreign creditors had started an alarming export of gold from this country. In the face of approaching peril the thousands of banks in the country, and individuals as well, were sure to withdraw gold for the purpose of hoarding. Moreover there was the annual demand for currency to move the crops. The resulting contraction in currency and credits must be averted by an issue of additional currency in large amounts.

The Secretary of the Treasury promptly announced that the Treasury Department was ready to issue immediately the $500,000,000 of bank notes which had lain idle in the vaults of the Treasury Department for so many years. Immediately succeeding this announcement it was suggested that an amendment to the Aldrich-Vreeland Act be introduced in the House whereby the limitation in this act that no bank notes provided for thereunder could be issued to any bank which did not have already outstanding circulating notes secured by United States bonds to an amount equal to 40 per cent of its capital stock would be removed. Such an amendment was necessary, because some of the largest banks in the country which most needed additional currency and through which additional currency could most advantageously be issued did not have outstanding notes to an amount equal to 40 per cent of their capital stock. I distinctly remember the promptness with which this suggestion was made because I was present with the majority leader [Mr. UNDERWOOD] and with Chairman GLASS of the Banking and Currency Committee at a conference which we held in Mr. UNDERWOOD's office, at which it was decided that the proposed amendment should be offered to the House on Monday, August 3. This amendment was offered and was passed in the House on August 3.

In the meantime, on the afternoon of Sunday, August 2, Secretary McAdoo, after consultation with the President and after a series of conferences in Washington, boarded a train in Washington, in company with the Comptroller of the Currency and other members of the Federal Reserve Board, and went to New York. There he held a council with the New York financiers, who were in a state of deepest alarm. Secretary McAdoo's plainly evident capacity to handle the situation inspired these great financial leaders with confidence and assurance, the one essential required perhaps more necessary than any other. Acting together in cordial cooperation, plans were laid out to meet the situation, with the result that on Monday morning confidence had been restored and definite assurance had been secured that the financial situation would be saved.

From that moment on one step after another has been taken to take care of the financial situation. By August 4 the amendment to the Aldrich-Vreeland Act as introduced into the House had become a law. In its final form it not only removed the 40 per cent limitation, which I have already referred to, but also increased the amount of bank notes which any bank might issue to 125 per cent of its unimpaired capital and surplus. It further provided that each bank and currency association should maintain on deposit in the Treasury of the United States a sum in gold sufficient, in the judgment of the Secretary, for the redemption of such notes, but in no event less than 5 per cent of them, thus enabling the Secretary of the Treasury to maintain a sufficient gold reserve to meet all demands for redemption.

Up to the close of business on October 9, 1914, there had been actually issued $341,387,170 of emergency currency. This

vast amount of currency issued is the best evidence of the need for the action taken by the Secretary of the Treasury working in conjunction with Congress.

In every emergency even to small details which has arisen since, the officials of the Treasury Department have been ready to meet the situation. While serious distress and embarrassment still prevail in the business of the country, the financial structure is sound and secure.

In the brilliant administration of the Department of the Treasury credit is due not alone to the Secretary but also to the distinctively able, capable, and efficient associates who have so cordially cooperated with him—the Comptroller of the Currency and the Assistant Secretaries, and recently the members of the Federal Reserve Board.

The Comptroller of the Currency all through the present administration has occupied a position of tremendous responsibility. He has not only proved equal to every demand made upon him, but, through the power of his intellect and the strength of his personality, he has undoubtedly been an impressive factor in the great accomplishments of this great department.

The Treasury Department has unquestionably contributed generously to the great success of the Wilson administration, but it is, after all, only one part of the administration. It is, however, only when we examine the several parts that we have any conception of the magnitude of the achievements of the whole administration.

Men have been ready to judge the President's acts almost before he has acted. He has scarcely attempted a constructive act that severe criticism has not been forthcoming from some quarters. But he has not yet done one act which has not received universal approval when sufficient time has elapsed to permit that act to have a fair chance to operate.

All during his "watchful waiting" Mexican policy he was obliged to endure every manner of criticism and even abuse. He was under constant pressure of the severest kind to abandon his peaceful policy and rush into war. But he was patient, persevering, and resolute in his determination not to plunge his country into war.

To-day while Europe is devastated by war the American people are at peace. No European ruler or brilliant general in the world's greatest war can achieve the glorious victory which President Wilson has achieved for this Nation—the preservation of peace.

The whole country recognizes now that President Wilson was right in his Mexican policy. If they will watch and wait, they will find that he is right in all his other policies.

Water Power.

SPEECH

OF

HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 13, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 16673) to provide for the development of water power and the use of public lands in relation thereto.

Mr. RAKER. Mr. Chairman and gentlemen of the committee, this legislation is intended to cover many objections that have been made to the present law in regard to the granting of water power. All three political parties last year stated that they were in favor of conservation and in favor of a law governing the control and handling the public lands to the end that the people generally might get the best use there was from those lands. There ought not to be any great feeling over a question of conservation as to what it means, but there is a distinction just as broad and as deep as the chasm between "reservation" and "conservation." Our friends in the East and in the South, while not intending in any way to retard the development of the West, make a misconception as to the difference and distinction between "conservation" and "reservation." "Conservation" ought to be the watchword of every public man and every citizen. Where you can conserve a public property or private property or conserve the public health you ought to be in favor of it. No man can stand one minute and say that he is not in favor of getting the best utilization out of the property that this Government has for the benefit of its citizens generally. That is what we mean by conservation.

Mr. JOHNSON of Washington. Will the gentleman yield for a question?

Mr. RAKER. I yield to my distinguished friend from Washington.

Mr. JOHNSON of Washington. In case of the Appalachian Mountain Range being purchased by the United States Government, is that a case of reservation or conservation?

Mr. RAKER. I am going to get at that in a moment.

Mr. JOHNSON of Washington. Therefore if the people of these Appalachian Range States are now clamoring that some form of revenue be devised to give them something in lieu of the taxes that are lost, is not that somewhere near the situation of the Western States?

Mr. RAKER. I will get to that more definitely a little later on. What has been interfering with the development of the West is the reservation of large territories, territories larger than the Eastern States, without use of the water that flows over the land or a permitting of its use or the use of the land by the homesteaders and the desert-land claimants and the mineral people and the miners. Their rights have been stopped to a more or less degree. But being in favor of conservation, instead of reserving it merely to keep it from being used, we believe that every miner should have the opportunity to mine that land to the very utmost of the capacity of the people that might go there. We believe that every tract of land in that reserve that can be used for a homestead ought so to be used and put into private ownership and put on the tax roll. We believe that every piece of land that can be put there in the way of desert-land claimants should be dealt with in the same way; and the same with regard to the timber that can be developed on these public timber lands. All the timber that can be used to keep down prices ought to be disposed of to the general public, so that they could have the use of it.

The idea of conservation is for its use for one purpose and not its use for another, and when our people talk about opening up this land and using the water rights and the soil and the minerals people think we are trying to take it from the Government and keep it from use. As a matter of fact, we want to put it to the highest use possible, just as men do with the land in the Eastern States, whether it is land in public ownership or private ownership.

Mr. BOWDLE. Mr. Chairman, will the gentleman permit an interruption there?

The CHAIRMAN. Does the gentleman from California yield to the gentleman from Ohio?

Mr. RAKER. Yes.

Mr. BOWDLE. How does it come that the gentleman from Washington [Mr. JOHNSON] is down on it and the gentleman from California [Mr. RAKER] in favor of it? Is it through a misunderstanding?

Mr. RAKER. Absolutely a misunderstanding of the conditions; and I will make it plain.

Mr. JOHNSON of Washington. I do not want it to go into the RECORD that I am down on conservation. Conservation is here, and, in my judgment, it is here to stay.

Mr. RAKER. This country ought to be ashamed of the way in which it has disposed of its timber and given it to monopolies. The idea of conserving these lands for the time being was to hold off the hands of these ravagers of the public domain, to the end that Congress might enact legislation so that we could put out the lands to those who wanted them and needed them. And it is the same way in regard to mineral lands. Men were filing mineral claims upon whole counties. One association of 10 men would be filing practically upon all the land, timber and mineral, in a county, never intending to use it legitimately. Eight men would file on 160 acres apiece here and there, until they would practically cover all of it.

Mr. JOHNSON of Washington. In what State?

Mr. RAKER. In California. And you will find it in other States just the same. It was the same way in regard to the oil lands, where it was the hope of some to give to one great corporation or organization an absolute control and monopoly of those great properties in order that they might control not only the timber and the land and the water, but every other resource that was in that country.

Now we are coming down to the question of how we are going to use it. The timber proposition is being relieved. It is not being turned over to a few individuals and corporations as it was formerly. The mineral land under the present laws can be utilized and ought to be utilized to the very utmost. The only complaint our people have on the mineral proposition is that in the reserves they are trying to restrict them as to the mode and method of mining, and they contend that they ought to be relieved from that.

Now, coming to the question under consideration—and that is the water-power bill—this bill provides that it shall not affect and shall have no relation in any shape or form to the water of the streams. That is a matter that is under State control,

and this bill does not intend to affect the disposition or the handling of the water of these streams. The Government does retain great areas of public domain. The Government is the sovereign over it, and the Government owns it, just as you own your property, to dispose of it under the provisions of the Constitution in a legitimate and in a proper way. Men have gone upon these streams and filed for miles and miles various claims or bought them all up. They want to control great possibilities for irrigation and for electric power. They have been buying up these lands on either side—some public land and some private land—for a small consideration, and the Government has said that we ought to have some control over this matter.

There have been upon the statute books for the last 16 years what are known as the "rights-of-way bills" for construction of electric lines and poles and also for irrigation. Those bills only permit the Secretary of the Interior to give a revocable permit, so that a man or an institution, in absolutely good faith having expended $100,000 or $200,000 in developing its plant, buying land, building ditches, and obtaining water rights after it had obtained the Government's consent, might have its rights swept away by the revocation of the permit. For an infinitesimal objection the Government could deprive it, with one signing of the pen by some individual in the department, of that entire property. No man is ready and willing to invest his money and property in such an enterprise, to be controlled solely at the dictation of one individual, who can say that he did not like the color of his hair, he did not like the people he associated with, or a thousand trivial matters, whereby all his earnings and those of his friends might be snuffed out. The people believe in conserving this power and the possibilities of it in themselves, to the end that they might control it and fix the price and see to it that there was not an absolute monopoly in the hands of a few.

Now, this bill permits them to retain these rights, and there is only one question—as to whether or not it should be in the discretion of the Secretary or whether it should be mandatory on him to grant the right when the first applicant applies. But in the wisdom of the committee and the majority they have said that it should be in the discretion of the Secretary.

Now, it gives the man in the first instance an opportunity to make his application to see whether or not he wants to deveolp, to see whether or not he ought to survey, to see whether or not he can get capital, and this bill gives him a year in which to lay out his plans and specifications and determine what he can do.

And then it may give him another year; and after he has secured the information and data he desires and has secured enough money to go on with the plant, after he has investigated the supply of water, after he has investigated the surrounding country as to the private lands, he can go to the man who owns a ditch and water right, and in connection with what he knows he can have an option on that. He can have his matter of ownership determined, whether or not it is feasible, whether or not he ought to go into that business. That is all that is for, and it is wise and proper, and the latter part of it provides that he shall have a prior right to make the application. Now, ought he not to have it?

Mr. CLINE. May I ask the gentleman a question?

Mr. RAKER. Yes; I yield.

Mr. CLINE. What was the purpose of putting the rate in the temporary permit? Does that language have anything to do with the rates that apply under the permanent permit?

Mr. RAKER. Absolutely. I will answer that directly after I have finished this sentence. Now, at the expiration of the permit period the party shall have a preference right to lease the land embraced in the permit. That is an absolute valid right. He ought to have it. A good many of the committee and many of the best engineers of the land and those who have investigated water powers believed, and presented their belief fully to the committee, that the first applicant, in applying to the Secretary of the Interior, should be given the absolute right. That was avoided by making it discretionary with the Secretary of the Interior to determine whether or not he should give them a lease for 50 years, but the committee said before that was done this man ought to have some consideration. If he has done all the preliminary work he ought to have a preference right to get the lease for 50 years if he comes within the purview of the law. How? Now listen:

> Upon the terms, conditions, and limitations authorized by this act.

He gets it under those terms, conditions, and authorizations.

Again, the Secretary figures in that preliminary permit so much per horsepower or kilowatt, so much of the expenses, whatever they may be, that he has to pay. The man then knows exactly what he is going into, if he can secure the other conditions. He can secure capital. Capital will know what it has to pay. Those who own the capital will then be in a position to determine whether or not they want to invest their money in that enterprise.

Mr. BOWDLE. Will the gentleman yield?

Mr. RAKER. I yield to the gentleman.

Mr. BOWDLE. Does not the gentleman know that it takes at least one year's observation to know how a stream performs, and therefore the Government would probably be tying itself up by this permit without such knowledge?

Mr. RAKER. A year is not time enough. The Government has had observations for the last 10 years on practically every stream in which it is interested. The Government knows practically all of these available water-power sites, knows the run of water, knows the elevation, knows about what can be done, and no man to-day can point to any piece of the public domain in the country and say "this is an entirely new thing."

The CHAIRMAN. The time of the gentleman has expired.

Mr. FERRIS. I yield to the gentleman one minute more.

Mr. RAKER. I want to call the attention of gentlmen to the fact that in all our public filings to-day on public lands the first person in time is first in right. That has been the law and is the law to-day in practically every State where the public lands are in regard to water, homestead, desert, mineral claims, and all.

Now we have changed it in this bill, and we allow the Secretary of the Interior to have that discretion; but we say a man shall have two years—one year certainly, and two years if the Secretary desires to give him the time—to determine whether he wants to do business.

We want to develop these water powers. We want these streams developed that to-day are going to waste, the water running unused into the ocean.

We want them developed so that the people in these communities may have electrical energy for the purpose of running their machinery, for the purpose of doing their plowing, for the purpose of lighting up their homes and their cities, for the purpose of lighting up their barns, in order that they may have some of the comforts of the city in the country, and in order that electrical energy may be furnished at a reasonable cost, and that the department may regulate it where there is no public utility commission in the State. That will develop every community. It will give the mining corporation or the association that has the plant a fair value for its money and a fair return, and that is all anyone ought to have.

Mr. HUMPHREY of Washington. Is the gentleman in favor of this bill?

Mr. RAKER. Why, yes.

An Injustice to the Civil War Pensioner.

EXTENSION OF REMARKS

OF

HON. EDMUND PLATT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 14, 1914.

Mr. PLATT. Mr. Speaker, I desire to occupy only a few minutes in calling attention to some recent happenings or rulings in the Pension Bureau, which, it seems to me, are resulting in injustice and even, in some cases, in great hardship to many of the veterans of the great war for the preservation of the Union. There was passed in May, 1912, what is known as the Sherwood Pension Act, under which every veteran of the Union Army who served 90 days or more may receive a pension, the amount depending upon the length of his service and upon his age. The maximum pension under this act is $30 a month, which is paid only to those who served two years or more and have reached the age of 75 years. On March 4, 1913, an amendment to this act was passed so as to make the increases for advancing age automatic. Every Member of this House knows the terms of the act. A veteran who served two years and is 62 years of age receives $15 a month. When he reaches 66 years he receives $17. At 70 he receives $23 a month, and when he reaches 75 he is entitled to $30. Before the amendment of March 4, 1913, had been passed application had to be made to the Pension Bureau for each increase, but since that time applications have been, theoretically at least, unnecessary. The officials of the Pension Bureau have prepared, in accordance with the terms of the amendment, a system by which they may know when each pensioner reaches the age for an increase without his asking for it.

It is just because of the system devised that trouble has arisen for some of the older pensioners who were pensioned many years ago under the various early pension acts for wounds or disabilities received in the service. In order to know the ages and the Army records of each pensioner the Pension Bureau has recently completed a card index of every pensioner, and in doing this work or in looking over the records involved mistakes made many years ago have been discovered, and in cases where these show that more money has at some time in the distant past been paid to a pensioner than by present interpretations of the laws he was entitled to the amounts are being deducted in a lump from pensions now paid. Two such cases have come to my attention from my district—one of them involving a refund of about $100 from a man who is receiving but $24 a month. In the case I took up with the Commissioner of Pensions he readily admitted that the mistake was no fault of the old soldier, who could not have known that he was being overpaid two or three dollars a month 40 years ago. Yet, now, when he is old and unable to work and absolutely dependent upon his pension, it is entirely taken away from him at the approach of winter for a period of more than four months. I think this is an unnecessary hardship to inflict for the sake of correcting a blunder made by the Government itself many years ago. It seemed to me rather picayune business for the great Government of the United States to be collecting these debts, which would have been long outlawed from any other creditor, debts which were the result of its own blunders, from the old soldiers at a time when they were least able to pay; but I asked only that the deductions, if they must be made, should be made in small installments so as to cause as little hardship as possible. This, I was informed, was impossible as the law required the collection of the money at once. It seems to me that this is outrageously unfair, and I wish to protest strongly against it. If the law really requires it, the law should be changed as soon as possible. None of the earlier pensioners, men who received their pensions because of wounds received in battle, can be sure that some more or less technical errors may not be found in the payments made in small sums to him years ago.

Kaibab National Forest.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 5, 1914.

Mr. BRYAN. Mr. Speaker, a few weeks ago I introduced a bill providing for a Government railroad from Marysvale, Utah, to the heart of the Kaibab National Forest in northern Arizona. I submitted estimates to show that this road could be built and equipped for $3,000,000. I also showed that the Government owned 2,000,000,000 feet of timber in the Kaibab Forest and that 1,000,000,000 feet of this timber was ripe and ready for market, and would be marketed except for want of transportation.

I submitted further figures to show that the increase in value of this timber, if transportation were afforded, would be $4,000,000—more than the cost of the road. In addition to this market would be afforded for the ripe timber and it would be saved from loss and decay. It would seem from these facts clearly demonstrable that the Government would be $1,000,000 the winner if it were to build this railroad and get the benefit that it would afford to the Government timber holdings, even though the entire construction cost would be lost. In other words, the Government would be $1,000,000 in if it were to construct the railroad at a $3,000,000 expense, and then give the railroad away to private parties.

As is always the case knockers have made their appearance against this proposition. Up to this time I have not had the support of any member of the Utah delegation here in Washington. It may be that these gentlemen are better posted about some of the features than I; but it is impossible for me to ignore the reports of the Forest Service, the Reclamation Service, the United States surveyor general at Salt Lake City, and other facts that have been presented to me by parties in interest.

The records show extensive coal properties in this district which will be affected by the general leasing bill.

I express the hope that the people of Arizona, who are writing me and showing such great interest in this measure, will take the matter up with their Representatives and with other western Members. If this be done with sufficient earnestness, I believe we can accomplish the purpose of the bill. I have received a great deal of help and encouragement in this matter through the efforts of Mr. Arthur Woolley, who came to me for the first time after I had introduced the bill. He has not only called to my attention reports setting forth the resources of the country through which this railroad would traverse, but he has shown me many kodak pictures of items of interest which demonstrate the richness of this region. I have received from Mr. I. C. Thoresen, United States surveyor general, two letters, one dated September 25, which I here insert as a part of my remarks. This letter shows something of the merits of the proposition and gives details of interest.

DEPARTMENT OF THE INTERIOR,
OFFICE OF UNITED STATES SURVEYOR GENERAL,
Salt Lake City, Utah, September 25, 1914.

Hon. J. W. BRYAN,
House of Representatives, Washington, D. C.

MY DEAR SIR: In reply to your letter of September 21, will state that I have not, personally, explored the south-central part of Utah over which the proposed railroad will be built, beyond Marysvale; although I recently had permission of the department to take a trip into that section, but after reaching Marysvale we found we were unavoidably compelled to return to Salt Lake, with the understanding that the trip would be undertaken again in the near future, for which I asked permission of Commissioner Tallman. I am, however, quite thoroughly acquainted with the southwestern part of the State and the northwestern part of Arizona, as well as the eastern part of Nevada, and will state that the two most practical routes to reach the Kaibab Forest Reserve are your choice over a comparatively easy grade practically due north to Marysvale, Utah, and the other west and southwesterly down the Rio Virgin, passing Kanab and St. George in Utah, and following the course of the river through the northwest corner of Arizona, down said river to St. Thomas in Nevada, at the junction of the Muddy with the Rio Virgin, from which point there is a branch railway connecting with the main line of the San Pedro at Moapa, Nev. I have, however, heard a number of statements by men that have explored this section and its resources, including the timber, and also the chances of a railway from Marysvale south, all of whom give very good reports thereof, and that the said route is practical and can be built with less than 2 per cent grades. I have on file in this office a report by a former United States deputy surveyor, Mr. A. D. Ferron, giving the general descriptions of the sections which said railroad will open, and through the central part of which it will pass, copy of which I inclose herewith.

I was recently handed a report on a manganese property in that locality, which apparently exceeds in quality and quantity any and all deposits of such kind yet discovered in any part of the world. I am inclosing a copy of said report made by Mr. N. Jennings, a gentleman with whom I am personally acquainted and who has spent many years in said sections. Besides the manganese, Mr. Jennings informs me that there are immense bodies of low-grade copper for miles in different directions from the location of said manganese claims, and also iron deposits and coal, which, however, have not been explored on account of its location being so far from the railroad. I have also a report of an extensive copper property near the south boundary of Utah, in this same locality, called the Pahreah Consolidated Copper Co., made by John J. Hines, a mining expert of Colorado. This property is owned and has been worked for years by residents of Pahreah and vicinity, and some of the high-grade ore has been shipped, but the low grades could not be shipped at a profit so far from railway service. I am inclosing you excerpts from said report.

Relative to the coal deposits in the north part of this section, between 50 and 75 miles south of Marysvale, a friend of mine, who is a very competent expert, wrote me last February as follows:

"I take pleasure in calling to your attention a large and extensive coal deposit in south central Utah, on the southern rim of the Great Salt Lake Basin. This tract covers an area of 150,000 to 200,000 acres, but in my opinion a judicious location of, say, 50,000 acres, would control the situation.

"The geological horizon of the coal is the Colorado Cretaceous, and it may be correlated with the coal deposits of southern Wyoming, northern Utah, and southern Utah; and it forms the main and most valuable part of the last mentioned. So far four workable seams have been discovered, 25, 4, 8, and 17 feet thick, respectively, upward from the bottom, but in some places the lower seam reaches a thickness of over 50 feet.

"This coal is bituminous and contains from 3 per cent to 7 per cent ash, about one-half per cent to 1 per cent sulphur, and 40 per cent to 45 per cent fixed carbon, the balance being volatile carbon and moisture. The uppermost seam I consider a 'steaming coal.' In some places the lower seam is underlain by a fine seam of 'cannel coal,' varying in thickness from 3 to 8 feet. This coal can be shipped north to Marysvale, about 60 miles, but the natural outlet and market for it is southern Utah, Nevada, California, and also Pacific Ocean shipping. It would need the building of about 100 miles of railroad to connect it with present railroad facilities in southeastern Nevada, and, I think, could then be laid down, say at San Diego, for about $3.50 to $4 per ton. Similar coal is selling now, I am told, on the Pacific coast at from $10 to $15 per ton by the carload.

"The land is unsurveyed and hence the absolute title still remains with the Government. It has consequently never been classified by the Geological Department.

"I am well acquainted with every foot of the country under consideration and have known this deposit since 1876."

This is all the data I have at hand, but expect in the near future to receive reports on other resources in the locality and shall also secure a statement from a gentleman who has recently explored the country quite thoroughly, especially observing the chances for constructing a railway from Marysvale to the Kiabab Forest and also to other timber tracts in southern Utah.

You are at perfect liberty to use my name in connection with any of these reports, and, if necessary, I shall be pleased to give you the names and addresses of my informants or any other information that will assist in making a success of your meritorious undertaking.

Yours, respectfully,

I. C. THORESEN,
United States Surveyor General for Utah.

I replied on September 30, 1914, with the following letter to Mr. Thoresen:

SEPTEMBER 30, 1914.

Mr. I. C. THORESEN,
United States Surveyor General for Utah,
Salt Lake City, Utah.

MY DEAR MR. THORESEN: I am just in receipt of yours of the 25th instant containing data concerning the proposed railway to the Kaibab National Forest. I thank you very much for this, and assure you that the information you have given me is very valuable, and I will make good use of same. I intend to advertise this proposition all I can, with the result, I think, that these properties of the Government will be developed and that general development of such properties will be stimulated.

Assuring you of my appreciation of this or any further data you can furnish me, I remain,

Very truly, yours,

J. W. BRYAN.

I also insert here reports which have been furnished me that have a bearing on the matter.

[A. D. Ferron, 553 Eighth Avenue, Salt Lake City. Filed Jan. 18, 1910.]

JANUARY 17, 1910.

Hon. THOMAS HULL,
United States Surveyor General for Utah.

DEAR SIR: I have recently returned from a trip to southern Utah and beg leave to make a short report on a section of the State which has hitherto had but little attention from your office, owing, no doubt, to the fact that the section in question lies in the wildest and most inaccessible part of our State.

I found a valley nearly 50 miles long, from 5 to 10 miles wide, and embraced approximately in township 36 south, ranges 4 and 5 east; township 37 south, ranges 4, 5, and 6 east; township 38 south, ranges 5, 6, and 7 east; township 39 south, ranges 6, 7, and 8 east; township 40 south, ranges 8 and 9 east; and township 41 south, ranges 8 and 9 east.

The survey designations I have obtained from the General Land Office map of Utah in accordance with the topography as there laid down. The valley may be described as lying between the straight cliffs on the northeast side of the Kaiporowits Plateau and the Escalante River. It has an average elevation of less than 5,000 feet above sea level, and is especially adapted for raising all kinds of fruit, grapes, peaches, apricots, etc., alfalfa, corn, and all the cereals. Measurements are now in progress to obtain the amount of water supplied by all the affluents of the Escalante River, which run in deep canyons, with a view of creating a large lake at and around the town of Escalante in order to raise the water sufficiently high to throw it on the land in question. As soon as the water question is settled, the land described will all be claimed by settlers.

The following townships, embracing the Kaiparowits Plateau—T. 36 S., Rs. 2 and 3 E.; T. 37 S., Rs. 3 and 4 E.; T. 38 S., Rs. 3 and 4 E.; T. 39 S., Rs. 4 and 5 E.; T. 40 S., Rs. 5, 6, and 7 E.—afford some of the finest grazing lands in the State, where ordinarily stock can graze all winter.

The following townships, approximately, are all underlain by Colorado-Cretaceous coal, comprised in four veins or beds, the series approximately having a thickness of 50 feet. The coal is of good quality, low in ash, with hardly any sulphur: T. 35 S., Rs. 1 and 2 E.; T. 36 S., Rs. 1, 2, and 3 E. and 1, 2, and 3 W.; T. 37 S., Rs. 1, 2, 3, and 4 E. and 1, 3, and 4 W.; T. 38 S., Rs. 1, 2, 3, and 4 E. and 1, 2, 3, and 4 W.; T. 39 S., Rs. 1, 2, 3, 4, 5, and 6 E. and 1, 3, and 4 W.; T. 40 S., Rs. 1, 2, 3, 4, 5, 6, and 7 E. and 1, 3, 4, and 4½ W.; T. 41 S., Rs. 1, 2, 3, 4, 5, 6, and 7 E. and 1 W.; T. 42 S., Rs. 1, 2, 3, 4, 5, 6, and 7 E. and 1 W.; T. 43 S., Rs. 1, 2, 3, and 4 E. and 1 W.

These coal townships are mostly all good grazing land, and the surface should be sold separate from the mineral contents.

Besides coal, there are also asbestos and copper veins in the country and inexhaustible supplies of gypsum and natural cement rock.

Respectfully,

AUGUSTUS D. FERRON,
United States Deputy Surveyor.

REPORT ON ROUTE FOR RAILWAY FROM MARYSVALE TO KAIBAB FOREST.

Mr. N. Jennings, of Levan, Juab County, Utah, writes me, October 8, 1914, as follows concerning the route for a railroad from Marysvale south to the Kaibab Forest.

Mr. Jennings has traveled over this route several times, and has prospected the country quite thoroughly, and is very familiar with the topography of the country and also its mineral resources. He has traveled over the country by team and on horseback, and is a very practical, reliable citizen. His statement is as follows:

Regarding the route for the proposed railroad from Marysvale south, will state that if same is started from Marysvale there is a natural grade southerly by the Sevier River to the divide, passing Junction and Panguitch. From there the country slopes south to the Buckskin Mountains, but by taking a southeasterly course from Panguitch along the watershed or divide a nearly level route could be followed to the reserve. This latter route would have an unlimited mineral wealth in copper, manganese, coal of several kinds, iron, and other minerals, together with a vast timber belt on the Buckskin Mountains, and also pass near the southwestern part of the Powell National Forest in Utah.

I consider this the best and most practical route to reach said forest reserve, and also to tap the mineral belt above referred to, as it would have practically no divides to cross and would be on a gradual slope the entire distance. This route is both nearer and much more feasible than the route that has been proposed, going northwest from the forest down to St. George, which is very much lower, then up over at least two divides, and connect with the San Pedro at Lund in the western part of the State, and thence northeasterly to Salt Lake.

However, for an outlet from this section to the coast, the proper route would be westward, following down the Rio Virgin to St. Thomas, Nev., and connect with a branch railway already built from that point to Moapa, on the San Pedro.

I have made no surveys in this section, nor have I taken elevations of any of the different places named; but having passed over the country so many times with my team and on horseback, I can see no reason why an excellent route for a railroad can not be secured between these two points, and that a railroad can be cheaply built, and I am positive that the resources of the section that it will cross will make such a road very profitable, aside from the timber in the Kaibab Forest.

When this proposition was first suggested the Commercial Club at Salt Lake City gave its hearty approval and wired me that the plan was not only a good one for Utah, but that it involved the right economic principles since the Government retained ownership of the property. If the Government retains the timber, coal, and the other extensive resources, it is impossible, as the Commercial Club clearly reasoned, to get private capital to build the railroad.

The next development was a series of knocks. A report was sent out that the Forest Service would not recommend the construction of the road. Standpat newspapers who had more regard for traditional connections with standpat political organizations than they seemed to have interest in the community began to show a disposition to knock the enterprise. This situation makes it necessary that the people of Utah get busy and see to it that those who inspire the thought of the Utah newspapers get in line for this bill.

The Forest Service, of course, is not going to make any campaign for any bill, but I can say to those who have read reports to the contrary that the Forest Service has no objection to this enterprise whatever and will throw no stone or hindrance in its way. I have received the following letter from Mr. I. C. Thoresen, the United States surveyor general at Salt Lake City:

DEPARTMENT OF THE INTERIOR,
OFFICE OF UNITED STATES SURVEYOR GENERAL,
Salt Lake City, Utah, October 13, 1914.

Hon. J. W. BRYAN,
House of Representatives, Washington, D. C.

MY DEAR SIR: Your letter of the 30th ultimo received and appreciated. According to my promise in my letter of the 25th ultimo, I inclose herewith two reports of the proposed railroad routes between the Kaibab Forest and Marysvale from men of practical experience and thorough acquaintance with this section of our State.

I also inclose a map of this section, giving the location of said proposed railroad routes, and showing the watersheds and drainage toward the respective river systems. Said map has been compiled from the best and most authentic data within my reach, and has been checked by the gentlemen whose reports are inclosed and who have personal knowledge of this section.

The following statement was published in the Deseret News the 17th instant:

"A Washington dispatch says that sentiment in the House of Representatives is that favorable action will not be taken on the proposition of Federal construction of a railroad into the Kaibab National Forest. The Forest Service, the report says, will not recommend that the Government build the road, but recommend that rates on timber be made so low that private capital will be induced to construct the line."

I have noticed other similar items in said paper; also in the Herald-Republican of this city, both of which papers are more or less dependent for Washington news upon the Utah congressional delegation; hence I am inclined to believe that said delegation is not friendly to the building by the Government of said proposed railway. I am also aware that the railway companies operating in this State are against such a move. I am also indirectly informed that private capital is making investigations relative to the building of a railway over this route. But, as stated in my first letter to you, I hope that your bill will be made law and that the Government itself will construct—and I hope operate—a railway in this State not only for the profit that is in it but also for the moral effect of elevating the standard of railroading in this section.

Wishing you success, I beg to remain,

Yours, very truly, I. C. THORESEN.

P. S.—Map mailed under separate cover.

I. C. T.

The letter contains the following interesting reports:

EXCERPTS OF REPORT OF THE PAHREAH CONSOLIDATED COPPER CO.

This property is located 6 miles south of Pahreah settlement, Kane County, State of Utah, 125 miles south of Marysvale; it is on the east slope of the Buckskin Plateau; good wagon road to property; altitude about 6,000 feet; altitude at Paria River 4,000 feet.

The property consists of 12 full claims, unpatented.

The country rock, or formation, consists of red sandstone and a decomposed porphyry and limerock footwall for the veins, which are highly mineralized, with every space and crevice filled with mineral.

There are three distinct fissure veins following the mineral zone with a northeast and southwest strike, with an easterly dip of about 80 degrees. All three veins are copper ore and will carry a little gold and silver. These veins have been traced over 100 miles along this mineralized zone. It is quite conspicuous, demarking the division between the lime and porphyry and the native red sandstone, and is taken as the mineral guide by the prospectors for that section of the country.

Seven hundred and fifty feet of tunnel driven to cut main vein, cuts vein in tunnel 13 feet wide, that will go from 6 to 15 per cent copper. A 200-foot tunnel on east side cuts a 22-foot vein at 150-foot depth that will average from 10 to 30 per cent copper.

A crosscut tunnel in ore 120 feet on a 13-foot vein, which will go from 6 to 18 per cent copper. About 10,000 tons of ore in sight, which will average 10 per cent.

There are several blow-outs along top of ridge that will average better than 70 per cent copper. I firmly believe the whole mountain will average 6 per cent.

Beyond doubt the fissure veins are the ore mecca, as they were the vents from the great depths for the mineral which was brought up in gases and hot solutions and forced into the contact and other wall spaces. No work has been done under 150 feet of depth.

The ore shows to be continuous at all openings in depth and of a higher grade than above; then why is it not reasonable to suppose

that as valuable mineral exists below as has been taken out above, for the veins all increase in width as you go deeper on them.

Plenty of timber for mining purposes near the property.

Plenty of water in Paria River for mining and smelting purposes; never less than 500 inches and up to 3,000 inches, and more at time of spring thawing.

The mineral zone was first shown to a white man by the name of Shirtz by the Navajo Indians; their old trail crosses the property.

Your company, beyond doubt, have a valuable property, which is located for economic operation and with possibilities of developing a very rich mine at a moderate outlay under competent management. Samples of ore accompany the report.

Respectfully submitted.

JOHN J. HINDES.

REPORT ON RAILWAY ROUTES FROM KAIBAB NATIONAL FOREST.

Mr. E. W. Smith, residing at 274 South Tenth Street, Salt Lake City, Utah, makes the following statement relative to the railway routes from the Kaibab Forest. Mr. Smith is a very practical man with many years' experience in both mining and timber business. At the request of certain eastern lumbermen, with whom he is associated, he made a thorough investigation of the timber of the Kaibab Forest, and also of route for railway from said timber, especially to connect with the Denver & Rio Grande at Marysvale. In this examination he was assisted by Mr. Lang, a practical engineer connected with the Forest Service, and they secured the elevation of various points along said route, as well as studied the topography of the country closely, in order to obtain the most feasible and cheapest route for a railway from said forest to Marysvale.

Mr. Smith's statement is as follows:

"The timber of the Kaibab National Forest I found entirely satisfactory as to quality and quantity. I found the elevation at Bright Angel Point, in the southeastern part of the forest, to be 8,000 feet, and the highest point north of there, on what may be termed as a divide in said forest, 9,000 feet; while at Jacob Lake, in the northern part of the forest, the elevation was 7,500 feet.

"In my opinion the most feasible route for railroad out of said forest would be taking a northeasterly course from Jacob Lake to the northeast point of the forest, thence along the divide between the watersheds of the Paria River on the east and Johnson Creek on the west, in practically a straight course, about 15° west of north along said divide to Panguitch, Utah. No point of this distance would exceed an elevation of 7,500 feet, and would not be lower than 6,500 feet, which is the elevation at Panguitch. The course over this distance would encounter no rough country, and the work would be principally earth grading. From Panguitch the course would follow the West Fork of the Sevier River on a gradual grade, passing Junction with an elevation of 6,000 feet to Marysvale with an elevation of 5,839 feet. In this latter distance the Sevier River would have to be crossed a number of times, but being a small, narrow creek, well defined, with plenty of timber in the vicinity, the said bridging would be perfectly safe and could be cheaply constructed and a gradual grade be maintained.

"The said route from the timber to Marysvale would thus avoid all high divides and tunneling, and would maintain a very direct course; the distance, in our best judgment, is about 125 miles from Marysvale to Jacob Lake.

"Besides the timber of the Kaibab Forest, this route would pass just west of the southeast part of the Powell National Forest of southern Utah, in which, I am informed by good authority, there is an immense quantity of excellent timber and which I intend to explore in the near future. Aside from the timber and the excellent grazing quantities of the section, as well as very fine farming land, I saw much evidence of minerals, especially copper and coal, and I feel quite confident that a railroad constructed over said route would open up many resources, aside from the timber, that would make it one of the best-paying propositions that could be found anywhere in the country.

"I have also examined the route by way of Kanab and St. George to Lund or Modena, on the S. L., L. A. & S. P. R. R., and will state that in my candid opinion said route, for an outlet to the timber from the Kaibab Forest, is not practicable, for the reason that the grade lost in going to St. George, which is 5,000 feet lower than the Jacob Lake, and then the ascent up over the divide through a very rough mountainous country would be very expensive in construction as well as in maintenance, and the distance to the Utah market, as well as markets east, west, and north of Salt Lake, would be considerable farther. This route as regards first cost, maintenance, and distance could not be consistently compared with the route direct to Marysvale.

"However, if an outlet to the west for this timber, and especially for the immense coal deposits of this section, is desired, the same could follow the course of the Rio Virgin via Kanab, St. George, Utah, Bunkerville and St. Thomas, Nev. At the latter place it would connect with a branch of said S. L., L. A. & S. P. R. R., between St. Thomas and Moapa on the main line; but this latter road, in my opinion, would be a matter of the future; but for the present and for a market for the timber the Marysvale route to Utah points and other connections, as first proposed, is the only route that can consistently be considered.

"I have made a recommendation of this route to my associates and to others that have made inquiries of me concerning this matter."

REPORT.

SALT LAKE CITY, UTAH, *September 22, 1914.*

On four manganese mining claims, being Blue Bell, Nos. 1, 2, 3, and 4, situated in Kane County, Utah, about 100 miles south of Marysvale, which is the nearest railroad station at present, but the surveys of railroad proposed pass near these claims. This deposit of manganese covers about 80 acres and crops out nearly all over this area. The ore is practically the same in all parts of this deposit, and 10 or 12 feet down being the depth of explorations to date. Assays give an average of 65 per cent manganese and only a small percentage of silica. The native formation is porphyry and sandstone. Clay or talc is intermixed with the manganese on the surface. I submit herewith a fair sample of the ore.

Good water for domestic use within 1 mile of the property and for power purposes within 10 miles.

This ore can be mined and freighted by team to railroad (Marysvale) for $20 per ton. It is now worth $150 per ton.

The nearest town to the claims is Fahreah, which is 10 miles east of the property. The nearest ranch is 6 miles northeast of the claims.

These four claims are located and recorded, but little development work done.

N. JENNINGS.

Cotton and the South versus Copper and the West.

EXTENSION OF REMARKS

OF

HON. GEORGE J. KINDEL,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 21, 1914.

Mr. KINDEL. Mr. Speaker, my remarks on the cotton question will be brief as well as frank and in a friendly spirit toward my colleagues of the South, though I disagree with them most emphatically on the proposition of Government aid to cotton and tobacco growers to the exclusion of all other industries.

I fully realize the hardship and distress that the cotton growers of the South are subjected to as the result of the European war, which has practically destroyed the cotton as well as many other markets.

I sympathize with them as I do with every direct and indirect sufferer of this beastly, murderous, and civilization-destroying war, the baneful influences of which are spreading to all parts of the globe.

If we as legislators are to extend financial aid to sufferers in our country, it must not be to any one section or industry to the disadvantage of another. Incontrovertible justice makes it our urgent duty to equalize; therefore I would have suggested, if the rules had permitted it, an amendment to aid the copper industry, which, like the cotton industry, has suffered to the verge of bankruptcy.

Why should not copper instead of tobacco be listed with cotton for our aid?

Why not give aid to distilleries, whose product, whisky, is a twin to tobacco?

The present commendable and relentless internal war on whisky will soon put whisky and its allies out of business; then what is to become of our "baron" distillers if the Government does not extend to them a helping hand?

The gentleman from Texas [Mr. HENRY], when marshaling his facts in his "cotton-special-rule" plea of yesterday, mentioned, among other items, that the Government in the past has come to the rescue of western States and extended $82,000,000 credit in order that they might have homes and firesides for their families. Why did he not mention what the Government has done for the people of the South in the way of rivers and harbors and internal improvements?

In the West these advanced moneys are paid back directly to the Government, while in the South it is given without even expectation of direct return.

In this administration southern Democracy is unquestionably in the saddle. The House is controlled by 57 chairmen of committees, none of whom reside west of the one hundred and fifth meridian, which embraces 15 great Western States.

The following are the most important 13 committees, namely:

1. Ways and Means.
2. Interstate Commerce.
3. Post Office and Post Roads.
4. Agriculture.
5. Appropriations.
6. Judiciary.
7. Rivers and Harbors.
8. Foreign Affairs.
9. Territories.
10. Insular Affairs.
11. Naval Affairs.
12. Military Affairs.
13. Merchant Marine and Fisheries.

Out of a possible 226 Democratic committeemen on the above committees, the West, west of the hundredth meridian, has but 1 committeeman.

To think of it, only one Democratic member on these important committees in the West, which is the gentleman from California [Mr. KETTNER], on the Rivers and Harbors Committee.

This discrimination against western representation on the above important committees in part explains why we of the West are subjected to the most outrageous freight, express, and parcel-post discriminations.

Why should we in the West pay from 100 to 300 per cent higher freight rates per ton per mile than our brothers in the East or South?

Why should we in the West pay 23 cents per unit per hundred pounds on express rates while our eastern brothers pay but 10 cents per unit?

Why should we in the West pay from 50 to 150 per cent higher parcel-post rates than mail-order houses can ship in for on the same train?

At present there is a vacancy on the Interstate Commerce Committee. I, who was elected by 5,000 more votes than any

of my Democratic colleagues, applied for this committeeship, but was flatly denied the place, because, as it was claimed, this place is reserved for *another gentleman Member from the South*.

Is this fair? Is this justice to the Democratic West?

Why not practice the golden rule and extend a helping hand to the West as well as to ask one now *exclusively* for the South?

Why not treat copper, a western product, as you would cotton, a southern product? Why discriminate in favor of tobacco as against copper?

Copper will keep and is not subject to fire or corrosion, while tobacco and cotton are subject to deterioration by weather and fire. Therefore neither cotton nor tobacco would be as good Government security as copper. Hence I contend that copper and the West ought to be given at least an equal chance with cotton, tobacco, and the South.

On Adoption of Conference Report on Antitrust Bill.

EXTENSION OF REMARKS

OF

HON. HENRY D. FLOOD,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 7, 1914,

On the conference report on the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. FLOOD of Virginia. Mr. Speaker, through the kindness of some one in sending me a record of my recorded votes in the House, I find that on June 5 I am not recorded as having voted on H. R. 15657 and H. R. 15686, whereas I was present in the House on that day and voted for the passage of both of those bills. I was not aware of the fact that in the RECORD I was so recorded until a short while ago. For the purpose of correcting the RECORD I make this statement.

The Philippine Islands.

EXTENSION OF REMARKS

OF

HON. CHARLES H. SLOAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914,

On the bill (H. R. 18459) to declare the purpose of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for the Philippine Islands.

Mr. SLOAN. Mr. Speaker, the most serious objection to the proposed legislation is the fact of its existence and its being pressed at this particular time.

With a large part of the civilized world engaged in the most gigantic martial struggle known to history; and those nations with countless and intricate interests touching in one way or another the various peoples of the globe, and with the high tension of feeling now animating every cabinet, parliament, and people, the time is inopportune to call for any declaration of intention as to what the future course of this country may be.

The policy of this country, so far as the party now out of power and under whom the islands were taken, needs no reiteration. The Philippines have been assured the full measure of representative government up to which they can measure as time proceeds, and the measure of government accorded to them is wisely left to themselves to be wrought out by their own progress and genius.

When in the course of time the people of the Philippine Islands shall have advanced and coordinated their progress one with the other, and have developed along material lines so that they can assume independence and thereafter maintain it, I believe it to be the policy of the American people to extend it to them.

But with war being waged in the Philippine quarter of the globe, and with events now fast ripening with probable large and numerous changes to be made in the map of the world, and every part of it, except the American Continent, it is indeed ill-advised, in the interest of the Philippines and the Americans, to be making the very loose and uncertain preamble statement involved in this legislation.

If, as it seems clear from the debate which has taken place, that several of the leading peoples of those islands, involving millions in the aggregate, are opposed to Filipino rule at this time or in the immediate future, it is not out of the range of strong possibilities that those peoples not in accord with the Filipinos will attempt to aid grasping nations in their greed for all or part of the territory included in this rich archipelago.

Mr. Speaker, it would be much better for this Government to explain, as it does in certain features of this bill, new rights, privileges, and prerogatives of the Filipino people, and repress the vague and uncertain promises involved in the preamble of this bill.

Cotton Situation Brought About by the European War.

EXTENSION OF REMARKS

OF

HON. FRANK PARK,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 21, 1914.

Mr. PARK. Mr. Speaker, a section of this country 400 miles wide by 1,500 miles long has been set apart by Him who established all things to produce material with which to clothe mankind.

Thirty millions of people dwell in this land, and in accordance with our Creator's will they have planted and tilled and harvested by patient labor over 7,000,000,000 pounds of cotton at a cost of production of $600,000,000.

The farmer who produced it, the merchant and banker and manufacturer who supplied him, are at the mercy of a declining market, gripped in conditions not foreseen and produced by circumstances beyond control.

A few may profit; multitudes will suffer. The poor will be hungry, cold, and suffer privation.

The farmer, the merchant, the banker, who have saved a competency, but have risked all in the cotton industry, are to see their life's work swept away when too late to renew the struggle.

From best information this is the condition: A low market has reduced selling prices below cost of production; the farmer can not pay the merchant and banker, the merchant can not pay the manufacturer, the banker and manufacturer can not pay the larger supply banks.

Commercial ruin stares hard into the face of the lately prosperous cotton States, with all the attendant train of suffering, reckless conduct, crime, and misery.

The cotton States have learned to produce the staple abundantly. They have neglected food crops, and have looked to the West for food supply.

The West temporarily can dispense with the cotton States trade, having a richer market at present in war-distressed Europe; they see no present pressing reason to assist the habitual consumer of their crops.

The Eastern manufacturer will not buy, because he waits for lower prices, and cold business says "wait."

Apparently there is no force outside the United States to help, and seemingly none at present for other sections of the United States. There is no help outside or inside the United States unless the Government shall devise a plan.

By a bill I asked that the 10 per cent penalty on State banks be suspended for a while, to permit the States to help themselves, but the suspension of this tax seems not to meet with favor. Various bills have been offered; none meet with favor. What must the cotton States do? I feel that Members of Congress, if duly impressed by the real danger, will enact remedial legislation. If relief be legal, we want it and need it now.

What objection can be urged to State currency that will be retired as the cotton goes to manufacturers and foreign ports?

If it be "wildcat currency," as some say, they do not have to take it in exchange for what they have to sell.

One hundred dollars issued by State banks as emergency currency will pay many debts and finally return to the bank that issued it.

It can not injure the national credit. It is not national currency, but intended to forestall imminent ruin. Its strength is founded on the faith in cotton of those who use it.

The situation appears to one who lives in the cotton States as if there is no willingness in other sections to lend a helping hand. This may be unjust to those sections who view the situation from a different angle. One secure on the bank of a turbulent stream sees the frantic efforts and hears the cries for help of one about to perish in the stream from a different angle. The one is struggling for life, the other is sympathetic, but not enough to risk to save him. A picture shapes itself on my vision and appeals to me.

The southern ox, full-blooded, heavy muscled, has toiled beneath the sun with neck bent to the heavy yoke, has made the crop and drawn it to the barn built of timbers he dragged from the forest; is now inside the stockade constructed of material which his strength hauled for the purpose.

Now, the big barn is locked against him by hands he has served, and the stockade is barred by the 10 per cent penalty on State banks for issue of currency. His blood is paling, his muscles weakening, he suffers; and it will take the strong arms and back of the Nation to put him on his feet.

The Nation will suffer because he suffers. The gold reserve will lessen. This is a national as well as cotton States' problem. The cotton States suffer first and longest. We are muzzling the southern ox. We should not muzzle the ox that treads the corn.

Mr. Speaker, in event no legislation is enacted for relief, I offer a remedy and a plan put in operation in Screven County, Ga., that has worked well.

CITIZENS & SCREVEN COUNTY BANK,
Sylvania, Ga., October 17, 1914.

Hon. FRANK PARK,
House of Representatives, Washington, D. C.

MY DEAR SIR: I appreciate very much your kindness in reminding me of the proposed publication of the Screven County plan for cotton-crop relief in the CONGRESSIONAL RECORD. I feel assured that this wide publicity will be productive of great good, as upon the universality of the use of this plan depends much of its success. Were it absolutely universal throughout the cotton States, the price of cotton would be fixed at the loan value of the warehouse receipts exchangeable for the cotton certificates.

You are undoubtedly working on the right line, and I sincerely trust your efforts will meet with the success they deserve.

Our plan is working admirably in Screven County, using, as you know, a warehouse company in the place and stead of the clearing house. With kindest regards, I am,

Yours, very truly,

W. J. WALKER, *President.*

THE SCREVEN COUNTY, GA., PLAN TO PROTECT ITS 1914 COTTON CROP.

THE PLAN.

It is proposed that each county in the cotton States shall immediately form a warehouse company where such county contains two or more banks which are willing to cooperate in this plan. This company should be a general partnership, unincorporated, composed of at least 12 of the most representative business men of the county, whose integrity is unquestionable. This will insure at the outset a healthy credit for the company and will cause its securities to pass current at par wherever the men composing the warehouse company are known.

Immediately after organization each company shall select an approval committee vested with authority to pass upon collaterals and property to be used as hereinafter set out, which approval committee shall promptly select for said company some representative official—suggested in Georgia as the ordinary of the county—as trustee, with duties as hereinafter set out. After the selection of such trustee the approval committee of the company shall designate such warehouses in their several counties as they shall deem best as storage warehouses for members of said company, selecting only such warehouses as shall be eligible to full fire insurance for cotton stored therein. When all the proper arrangements for the storage of cotton and the insurance thereof shall have been made and the trustee for such company selected, each company shall be entitled to issue cotton certificate or cotton bond upon the following basis and plan, to wit:

There shall be delivered to the trustee in blank a sufficient amount of lithographed or printed certificates to supply the company, in the tentative form submitted herewith, which said certificates when countersigned by the trustee and the treasurer of the company shall be accepted by those indorsing the plan as legal tender at their face value.

HOW CERTIFICATES ARE ISSUED.

When any owner of cotton shall wish certificates issued, such party shall offer to the approval committee of the warehouse company satisfactory collateral attached to his promissory note, or other evidence of indebtedness, on the basis of 7 cents per pound for middling cotton for the amount of certificates desired, whereupon if said collateral shall satisfy a majority of the approval committee evidence of such satisfaction shall be given to the trustee and the said collateral deposited with him, attached to said owner's note payable to said warehouse company, with interest at the rate of 7 per cent per annum due on the date of redemption of certificates issued against such security. When this shall have been done, the said trustee shall countersign a corresponding amount of cotton certificates or cotton bonds in such denominations as are requested by the owner applying, and such owner shall then be entitled to the use of said certificates as legal tender as aforesaid, it being only necessary for such certificates to be signed also by the treasurer of the company.

When the approval committee of the warehouse company shall select storage warehouses, such warehouses shall proceed to have printed or prepared a form of receipt for cotton, to be issued to each person, firm, or corporation storing cotton in said warehouse, which receipt shall show the number of bales stored, the name of the owner of such cotton, the number of pounds in each bale, and the grade of each bale so stored, and which shall also certify that each of said bales is fully protected by fire insurance in a company acceptable to the approval committee. Attached to said receipt shall be a certificate from the agent of such insurance company showing that the cotton so stored is fully protected, and, where it is possible to do so, the policy of insurance shall also be attached or deposited with the trustee. When such receipt and evidence of insurance shall be presented to the approval committee of the company, the warehouse company shall indorse such receipt, through its approval committee, and place a valuation upon the cotton represented by such receipt at the rate of 7 cents per pound for middling, and thereupon the trustee shall be authorized to issue a corresponding amount of cotton certificates or cotton bonds to the amount shown as the value of the cotton represented by the receipt at the said value of 7 cens per pound for middling cotton, in bales.

When any owner of cotton against which certificates have been issued desires to redeem his receipt pledged with said trustee, he shall be entitled to do so upon the surrender of a corresponding amount of cotton certificates with costs of insurance and storage, etc., to the trustee.

The trustee should be paid a reasonable sum for his services.

THE PROTECTION AFFORDED.

There should be a warehouseman for each company, to have physical charge of the cotton and warehouses. He should be placed under a sufficient bond, the condition of which should be to produce the cotton, of the grade he certifies it to be, when called upon to insure the cotton, and see that it is always fully insured and that it is well protected from the weather.

As security the holder of any cotton certificate or cotton bond will have the legal title to the cotton stored in the warehouse. He will be insured that it is properly graded, stored, and insured by a warehouseman under good and sufficient bond, with solvent security. The value of the certificate will be guaranteed by the farmer (owner of cotton). It will be indorsed by 12 or more solvent business men of the county where the warehouse is located. The certificates will be conveniently subdivided. They automatically go out as circulating medium as cotton comes in and are automatically retired as cotton goes out for sale. The title will be investigated and certified to by the approval committee of the company. The certificate or cotton bond will bear 6 per cent interest from the date of its issue to its redemption, and may run 6 or 12 months.

GENERALLY.

It is suggested that inasmuch as the cotton is stored from time to time with the warehouse company and not all within one month, the cotton certificates or cotton bonds should have their maturities fixed at intervals of 30 days apart, in even lots of thousands or multiples of thousand dollars, beginning not earlier than April 1, 1915, and then following May 1, June 1, etc. This will make their redemption less burdensome and not cause the cotton to be forced on the market in large quantities.

FORM OF COTTON CERTIFICATE USED IN SCREVEN COUNTY, GA.

Consolidated Warehouse Co., Sylvania, Ga.

No. ———. No. ———.

This certifies that there has been deposited with the Hon. J. C. Overstreet, ordinary of Screven County, Ga., as trustee for the said Consolidated Warehouse Co., approved warehouse receipts attached to farmers' notes on the basis of 7 cents per pound for middling upland cotton, to secure to the bearer hereof the payment by the said Consolidated Warehouse Co. of the sum of $1 (or $5 or $10) in lawful money of the United States of America, payable six months after October 1, 1914, with interest from October 1, 1914, at the rate of 6 per cent per annum. The cotton securing this certificate is insured against loss by fire at the rate of $45 per bale, and the receipt representing same is issued by a bonded warehouseman. Certificates payable at Citizens and Screven County Bank or Sylvania Banking Co., Sylvania, Ga., on April 1, 1915.

JACK C. REDDICK,
Treasurer Consolidated Warehouse Co.
J. C. OVERSTREET,
Ordinary, Screven County, Ga.

[Reverse side.]

This cotton certificate will be accepted on deposit by the banks named below and checks against same paid in like funds, at the option of the bank; it will also be accepted at par in payment of any obligations due said banks, to wit, Citizens and Screven County Bank, Sylvania Banking Co., W. J. Walker & Co., bankers.

This certificate, being fully secured and payable to bearer with interest, will also be accepted at par by the following merchants in $1 payment of any obligations due them, and may be freely used by any other merchant or individual in the same manner: All merchants in Sylvania, Ga.; all merchants in Newington, Ga.; Sylvania & Girard Railroad Co.; Farmers' Oil & Fertilizer Co.; Screven Telephone Co.; Telephone Publishing Co.; W. A. Mallory & Bro.; J. T. Averitt; L. P. Pearson & Son; A. R. Roberts; J. L. Limerick; C. C. Limerick Co.; M. L. Parker; J. C. Dixon; U. A. Zeigler; A. D. Lewis; H. B. Walker & Co.; H. & J. C. Reddick.

The following is a copy of the original contract or articles of copartnership entered into by the parties in Screven County, Ga., organizing the Consolidated Warehouse Co.:

GEORGIA, SCREVEN COUNTY.

This contract and agreement made and entered into on this, September 17, 1914, between J. H. Evans, W. P. Williams, H. S. White, W. J. Walker, J. T. Walker, S. F. Cooper, J. A. Mills, J. C. Reddick, J. E. Hart, S. J. Newton, all of said State and county.

Witnesseth: That the parties hereto have this day formed a general partnership, to be conducted in the city of Sylvania, said State and county, on the following terms and conditions:

ARTICLE 1.

The name and style under which said partnership business shall be conducted shall be "Consolidated Warehouse Co."

ARTICLE 2.

The general nature of the business intended to be transacted by the said partnership is that of receiving and keeping on storage cotton in bales, insuring the same, charging storage and insurance therefor, issuing receipts therefor, grading and weighing said cotton, and issuing certificates for the value of said cotton not to exceed a valuation of 7 cents per pound, basis middling, as hereinafter explained.

ARTICLE 3.

Said partnership shall commence on this date, and shall terminate 12 months from this date.

ARTICLE 4.

The place of business shall be in Sylvania, Screven County, Ga.

ARTICLE 5.

The profits of said business and losses of said business, if any, shall be borne by the parties hereto equally.

ARTICLE 6.

Each party hereto, who owns a warehouse in the city of Sylvania, said State and county, hereby turns same over to the warehouse company, and agrees that same becomes a part thereof, and obligates that he will not receive on storage any cotton in said warehouse other than as herein provided, at the rates herein provided.

ARTICLE 7.

Said warehouse company shall receive on deposit and for storage any and all cotton that may be presented to it which is merchantable and which the owner can deliver free from any lien or encumbrances, and which the owner has good title thereto. Same shall be received and kept on storage for 12 months, or shorter period of time, as the owner and warehouse company agree, but in no event for a longer period than 12 months. Said cotton so received shall be securely and safely kept, protected from the weather, from the time received on deposit, and shall be insured at the rate of 9 cents per pound so long as insurance companies will insure same at that valuation, and thereafter insure at the best price obtainable, with the privilege, if said cotton be destroyed by fire, other cotton of similar grades shall be substituted therefor if the warehouse company prefers. For such storage and insurance the said warehouse company and all the members thereof and the parties hereto shall charge the following rates, which shall be uniform, to wit: Fifty cents for the first month; 25 cents for each month thereafter on each bale so stored, payable when said cotton is finally sold or redelivered to the owner.

ARTICLE 8.

There shall be a general manager of said warehouse company, who shall be an expert cotton grader and classifier, to be paid such salary as may be agreed upon by him and with the approval of the committee hereinafter named and provided for, which salary shall be paid out of the profits of said company, i. e., moneys received for storage of cotton. He shall receive cotton for said warehouse company at one place only, to wit, on the public square, in the open park, just north of the Confederate Monument in the city of Sylvania. There he shall weigh and grade, mark same with a tag, and shall personally see that the cotton so received is deposited in one of the warehouses of the parties to this contract, which warehouse shall be under his, said general manager's, exclusive control and direction. Said general manager shall be under bond, with good and solvent sureties, in a sum not less than $5,000, the conditions of which shall be to faithfully and accurately account and deliver to the parties hereto, on demand, all cotton evidenced by receipts issued by him and all moneys and other property coming into his possession as said general manager.

ARTICLE 9.

Said general manager shall keep an accurate record of each bale of cotton received, from whom received, when received, the grade and weight, and place upon each bale a tag or mark of identification so that each bale of cotton can be readily and easily located. He shall issue, in duplicate, receipts bearing his own signature for each bale of cotton so received, which shall show the name of the owner of each bale, the date delivered to the warehouse, the weight, the grade, and the identifying mark placed thereon. Said receipt shall be issued in duplicate, shall each bear a number—the same number—and shall be issued in serial numbers. One of said receipts—the original—shall be delivered to the party delivering the cotton to the warehouse and the duplicate shall be retained by the general manager.

ARTICLE 10.

Said warehouse company shall issue its promissory notes, due six months after date, payable to the bearer, with interest at the rate of 6 per cent per annum from date, for cotton receipts, as provided in article 9 hereof, based on a valuation of 7 cents per pound, basis middling, in the following manner: Such notes or certificates shall be lithographed and in various denominations, from $1 to $20. They shall be delivered in blank, unsigned, to the ordinary of Screven County, Ga., who is hereby made trustee for the issuance of such certificates and for their safekeeping. When an owner of cotton desires to have certificates issued therefor, he shall apply to the Citizens' and Screven County Bank or the Sylvania Banking Co., or any member of said warehouse company, and surrender to them the cotton receipts that have been issued to him. He shall, in addition, give his promissory note to said warehouse company, due, likewise, six months after date, with interest from October 1, 1914, at the rate of 6 per cent per annum, and transfer said receipt to said company as security for said note. His note shall be for the amount he desires certificates to be issued. Thereupon said warehouse company shall deliver said note and cotton receipt to said trustee, who thereupon shall be authorized to sign and issue such certificates, in the name of said warehouse association, as are herein provided for, and said trustee shall retain the said note of the owner of said cotton and his cotton receipt so long as the certificates therefor remain outstanding. Such certificates shall be countersigned by the treasurer of the company, who shall satisfy himself that the note and cotton receipt are actually in the hands of the ordinary at the time of issuance of such certificates.

ARTICLE 11.

There shall be an approval committee for said warehouse company, whose duty it shall be, before any certificates or warehouse notes for cotton issued, to investigate and determine that the party who desires to have the certificates issued is the true owner of such cotton; that it is unencumbered and free from all liens; that it is merchantable and of the grade and weight shown by his receipt. Said committee shall report in writing to said trustee the result of their investigation before said trustee is authorized to issue said certificates. It is agreed that said approval committee shall be composed of W. J. Walker, S. F. Cooper, and J. H. Evans, subject to change that may be at any time made by a majority of the parties hereto.

ARTICLE 12.

The parties hereto each obligates to receive such warehouse certificates or notes in their respective business at par, before maturity, at any time in payment of debts due them or in exchange for merchandise or other articles they may have for sale, without condition or limitation, and pledge themselves to induce others to do likewise.

ARTICLE 13.

It shall be the duty of said general manager to see that all cotton or storage is properly insured and properly protected from fire.

ARTICLE 14.

For the purpose of convenience of handling the affairs of the company, J. H. Evans is hereby denominated president, as chief executive officer; S. J. Newton, as secretary, to look after correspondence; and J. C. Reddick, as treasurer, to sign the notes or certificates with the said trustee and to safely keep and account for all the funds of the company; but such persons so denominated are to have no authority except as given herein.

ARTICLE 15.

When the owner of the cotton stored desires to pay his promissory note and secure possession of his warehouse receipt, he shall apply to the approval committee of said company, and the trustee shall redeliver to said approval committee, and to it only, the note of the owner of the cotton and the warehouse receipt, and said approval committee shall surrender to said trustee an equal amount of certificates therefor, and same shall thereupon be immediately canceled by said trustee and safely filed away.

ARTICLE 16.

Each owner of warehouses shall pay the premiums of fire insurance and collect the storage on all cotton stored under the rules of this company.

ARTICLE 17.

The expenses of operation of this company shall be borne by assessment on the owners of the warehouses, which assessment shall be made by the approval committee, according to and in proportion to the number of bales stored by each of them.

ARTICLE 18.

No cotton deposited in said warehouses shall be surrendered unless storage and insurance charged for three months are paid.

In witness whereof, the parties hereto have hereunto set their hands, affixed their seals, and delivered these presents in triplicate, either of which copies may be treated as the original, on the day and year first herein written.

GEORGIA, SCREVEN COUNTY.

Whereas the organization of a warehouse company in Sylvania, upon the plans outlined in the attached agreement, will be of great benefits to the banks of Sylvania in the collection of indebtedness due them.

Now, therefore, in order to induce the organization of such company, and in consideration of the benefits that will flow to said banks from such company, it is hereby agreed by the Sylvania Banking Co. and the Citizens' & Screven County Bank, of Sylvania, Ga., that the warehouse certificates or notes, provided for in the attached agreement, will be received by said banks on general deposit at par before maturity or after maturity, but that checks drawn against same so deposited shall only likewise be payable in such certificates, and shall be accepted at par in payment of any indebtedness due any of said banks.

This agreement is made pursuant to a resolution regularly adopted by the directors of each bank.

This September 17, 1914.

GEORGIA, SCREVEN COUNTY:

I, J. C. Overstreet, have read the within contract and articles of agreement organizing the Consolidated Warehouse Co., of Sylvania, Ga., and I agree to act as trustee for the issuance and safe-keeping of the

certificates of said warehouse company, as therein provided, and to be bound by the rules and conditions stated therein, and not to vary from them in any manner.

This, September 18, 1914.

J. C. OVERSTREET,
Ordinary, Screven County, Ga.

The question has arisen in the minds of some as to whether or not these cotton certificates are subject to the Federal tax of 10 per cent under the acts of Congress, and appended hereto is an opinion of Garrard & Gazan, attorneys at law, of Savannah, Ga., upon this question.

In re: Certificates—Consolidated Warehouse, Sylvania, Ga.

SAVANNAH, GA., *October 2, 1914.*

Mr. JACOB S. COLLINS,
President National Bank of Savannah,
Savannah, Ga.

DEAR SIR: You have submitted to us letter from Messrs. White & Lovett, of Sylvania, to you, dated September 24, and also the documents which they turned over to you at the same time covering the articles of agreement and copartnership of J. H. Evans et al., showing the formation of a general partnership known as the Consolidated Warehouse Co., also the form of receipt given by the Consolidated Warehouse Co. for cotton delivered to it, and also copy of certificate issued by said company.

This letter from Messrs. White & Lovett desires to know if you will accept these certificates as collateral security for loans which you have to banks in Sylvania.

We have examined very carefully the papers submitted to us, and we find that the contract of agreement and partnership between J. H. Evans et al. is exceedingly well drawn, and this, together with the other documents submitted to us, show conclusively to our minds that this concern—Consolidated Warehouse Co.—is organized upon a good business basis, and its obligations are entitled to credit; that is to say, for value as per their face.

As to the issuance of these certificates, there can be no danger, so far as the trustee is concerned, for Mr. Overstreet is well known as being a man of high integrity, therefore he would not issue a certificate unless it was fully warranted.

As to Mr. J. C. Scott, who is stated to be the party who weighs and grades all cotton received by the company, we are not prepared to agree as to whether he is an expert from the statements made to us by several factors in Savannah; but whether he is so or not, if he misjudges the grade of cotton in a given instance so that the company lends 7 cents per pound upon the same as middling and it should turn out to be low middling or some lower grade, the loss would fall upon the warehouse company, which is bound by its certificates, whether its cotton is properly graded or not.

We are therefore of the opinion that these certificates, secured as they are by cotton insured in a warehouse, they appear to be, and no doubt are, good for their face value.

But another question arises and of considerable importance, namely, whether or not your bank by receiving these certificates as collateral security and holding them as such and not using the same or paying them out and in no wise aiding in their circulation is liable to the United States Government for the tax of 10 per cent under the act of February 8, 1875, chapter 36, sections 19, 20, and 21, touching tax on circulation by persons, firms, or banks other than national banks.

After carefully considering this matter and examining the statute and authorities under it we are satisfied that no liability can attach to your bank for simply holding these certificates as collateral security. Whether they are intended to be used for circulation or not, they will not be paid out by you in the process of such circulation.

Now, as to whether the Consolidated Warehouse Co. is liable for such tax of 10 per cent is a question not strictly germane to the province of this opinion, and yet we understand from Mr. White in submitting this matter to us that he would like to have our views on the subject.

Section 19 of this act of Congress of February 8, 1875, is in these words:

"That every person, firm, association other than national bank associations, and every corporation, State bank, or State banking association shall pay a tax of 10 per cent of the amount of their own notes used for circulation and paid out by them."

This section under all of the decisions relates to persons, firms, corporations, or State banks that put forth a circulating medium. In other words, it relates only to the issuer of such, the language of the act being "used for circulation and paid out by them."

The other section, touching tax on banks who pay them out or aid in the circulation of such demand notes, is section 20 of the act, and is as follows:

"That every such person, firm, corporation, association, State bank, or State banking association, and also every national banking association shall pay a like tax of 10 per cent on the amount of the notes of any person, firm, association other than national banking associations, or any corporation, State bank, or State banking association, or of any town, city, or municipal corporation, used for circulation and paid out by them."

There have been several decisions under section 19 which we shall refer to. Several of these decisions decided that the notes put out by the concern and payable in goods, not in money, do not meet the requirements of the statute, and therefore the tax does not lie.

For example, in a case in the Sixteenth Federal Reporter, page 370, the obligation was to pay the bearer 5 cents "in goods at our store," which simply gave the holder the right to exchange this obligation for goods.

So in a case in One hundred and eleventh United States, page 62, the Supreme Court held that an order issued by the Zion's Cooperative Mercantile Institute to pay the bearer $5 in merchandise at retail was not in purview of the statute, and no tax could be imposed.

So that it is clearly decided that the notes or circulating obligations must be payable in the money of the United States.

Now, when we come to examine cases relating to obligations payable in money we find as follows:

In the case of the United States *v.* Warrick (25 Fed. Rep., p. 138) Judge Bradley held in the Circuit Court of New Jersey that an obligation of Warrick & Stranger reciting that "five years after date we promise to pay the bearer at our store in Glassboro, N. J., 5 cents in lawful money of the United States, for value received," and reciting that this promissory note "will be taken by us at or before maturity for the amount named in payment of any debt due us," was an instrument condemned by the statute, and therefore tax was properly enforceable, the note in question being practically one payable on demand.

So, in Third Woods Reporter, page 553, the obligation under consideration was that of a savings bank in Mobile, Ala., which issued it, promising to pay to bearer $2 on return of this voucher, and notes were issued in the denomination of $1, $2, $3, $5, $10, $20, $50, etc., and the circuit court held that this was clearly in contravention of the statute, and that the tax was due and payable on the same at 10 per cent.

We come now to another class of cases, which more nearly apply to the certificates in question, to wit:

In the Nineteenth Federal Reporter, page 401, is the case of Philadelphia & Reading R. R. Co. *v.* Pollock, a decision made under section 19 of the act of 1875.

In that case the Philadelphia & Reading Railroad Co. issued a lot of wages certificates in the following form:

THE PHILADELPHIA & READING RAILROAD CO.

(Wages certificate.)

No. ———. PHILADELPHIA, *December —, 1878.*

The Philadelphia & Reading Railroad Co. promises to pay to the bearer hereof the sum of ——— dollars, on the ——— day of ———, 1879, with interest from date, without defalcation, for value received. This note is issued for wages due by the Philadelphia & Reading Railroad Co., and will be received either before or at its maturity for the amount due thereon in payment of freight or toll bills of the Philadelphia & Reading Railroad Co., for coal bills of the Philadelphia & Reading Coal & Iron Co., or any other debts due to either of said companies.

F. R. GOWEN, *President.*
S. BRADFORD, *Treasurer.*

This was a bill in equity whose object was to enjoin Pollock, collector of internal revenues, from endeavoring to enforce payment of the 10 per cent tax on the Philadelphia & Reading Railroad Co.

The lawyers for the railroad company contended that these were simply interest-bearing promissory notes, payable at a fixed time, resembling somewhat warrants issued by municipalities, and differing from obligations which circulate as money in that the latter are payable on demand.

The court in delivering its opinion held that the 10 per cent tax did not apply to these certificates, and enjoined the collector from proceeding.

On page 404 the court notes that these obligations are to pay the bearer a certain sum on some future day, with interest, and that when they were paid they were canceled and not reissued. They were therefore not used for circulation by the company who issued them, and they were only evidence of indebtedness by the company to other parties.

It seems that they were afterwards used by the parties who received them in payment of their own debts, etc., and this did not mitigate against the company issuing them.

Now, it is to be noted by the articles of agreement in the matter before us, these certificates of the Consolidated Warehouse Co., by article 15, when paid, are thereupon immediately canceled by the trustees and safely filed away, and are in no event to be reissued.

It is to be further noted that there is no reason upon the face of the certificate, as there is in some of the cases we have cited, why the issuer puts them forth to be used as circulation.

It can be of no moment to the Consolidated Warehouse Co. whether the farmer borrows $35 on a bale of cotton, takes a certificate bearing 6 per cent interest for the whole sum or for said sum cut up in smaller amounts. What the farmer does with them after he gets them can not possibly be a matter for consideration of the Consolidated Warehouse Co. He does not buy any goods from the warehouse company with them, except to pay his debt.

This last-named case was decided upon a ruling of the United States Supreme Court in the case of the United States *v.* Wilson (105 U. S., p. 620), where certificates were in the following form:

"No. 3491.

"ST. LOUIS & SOUTHEASTERN RAILWAY CO.

"Certificate of indebtedness, good for $20, to H. W. Gardener, paymaster, or bearer, payable at the office of the treasurer, St. Louis, Mo., four months after date, with interest at the rate of 10 per cent per annum. Good only when countersigned by the paymaster of the company.

"J. F. ALEXANDER, *Treasurer.*

"I. P. HAINES, *Auditor.*
(On margin) "Countersigned.

"H. W. GARDENER, *Paymaster.*

"148. $20.
"Due December 6, 1874.
"Twenty-five per cent of freight bills due the company may be paid in these certificates at their face value before maturity thereof."

It will be noted that this last-named certificate was payable at a time after date, bearing interest, and was issued by the railroad company, evidently during the panic of 1873–74, for labor, supplies, and machinery furnished the company.

It could be of no consequence to the railroad company in this last-named case what was done with the certificates. It certainly was of no benefit to it that they should be circulated around and pass from hand to hand. The railroad company did not have the money to pay the laborers, and for supplies or material, but they could give the certificate, payable four months after date, bearing 10 per cent interest per annum, and pay same, no doubt, when due.

In the matter of the Consolidated Warehouse Co. before us we take it that the farmer who gets these certificates desires them issued in small amounts, no doubt because he believes that he can prevail upon other people to take these certificates, bearing interest and well secured as obligations, good for their face value, at the same time being an investment for six months at a fairly profitable rate of interest for a secured indebtedness.

The warehouse company on account of the scarcity of money at this time, by reason of the war conditions, can only accommodate the farmers by delivering to them its secured certificates, and the farmers are willing to take them.

It does not seem to us, under the decision of the Supreme Court quoted above from the One hundred and sixth United States, and under that quoted from the Nineteenth Federal Reporter, that these certificates come under the category condemned under the act of 1875 as against the issuer.

We are clear that no tax of 10 per cent would be imposed upon your bank in taking them as collateral security.

The Supreme Court of the United States in One hundred and first United States, page 6, held that this statute was intended to destroy the use of obligations other than national-bank notes, and therefore

under section 20 of the act it is "the banker who helps to keep up the use by paying them out; that is, employing them as the equivalent of money in discharging his obligations, who is taxed for what he does."

We are sending a copy of this opinion to Messrs. White & Lovett, at Sylvania, Ga., inclosing back to them the papers which they handed us.

Very truly, yours,

GARRARD & GAZAN.

Copy to Messrs. White & Lovett, attorneys at law, Sylvania, Ga.

In conclusion I wish to say that I have witnessed and borne part of the privation of the southern people succeeding the War between the States. It dwarfed the country and its blooming prosperity. It would seem that I must witness it in no less stringent form again, and for how long I can not foretell; but very long, I fear.

The Southern States have been "hell-hacked" by conditions since the war, of which other sections have not the faintest idea. They will suffer again without fault of theirs; but they will come forth from the struggle with clear eyes and firm purpose to put Dixie where she belongs in the Union—in front rank, if battle scarred.

Speaker Clark's Letter.

EXTENSION OF REMARKS
OF
HON. EDWARD W. TOWNSEND,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Friday, October 16, 1914.

Mr. TOWNSEND. Mr. Speaker, I avail myself of the privilege extended to me to print in the RECORD the following interesting letter written by Mr. Speaker CLARK to one of his constituents.

The letter is as follows:

SPEAKER CHAMP CLARK'S LETTER TO JOE BURNETT, ONE OF HIS CONSTITUENTS.

SPEAKER'S OFFICE, *Washington, D. C., October 1.*

JOE BURNETT,
Editor Ralls County Record.

DEAR JOE: I most heartily thank you for your fine editorial compliment to Congress and its work.

The Lord knows there have been few enough bestowed, and yet this Congress has done more hard work, and better work, and stayed on the job longer than any other Congress that has ever been elected.

We have been in session ever since the 7th day of April, 1913, and we have not only been in session longer, but we have put in more days of actual work.

MEETING NEARLY EVERY DAY.

It is the rarest kind of a thing that we are not in session every day, and yet your paragraph is one of the very few that I have seen that evinced the least disposition to give any credit to hard working, conscientious, industrious, faithful, patriotic Congressmen.

No set of men was ever more faithful, and I am proud of the splendid record which we have made. Nearly all of our great bills were so good that they not only received the support of Democrats, but also the support of a large percentage of Republicans and Progressives.

Of course there were a great many things promised in the Baltimore platform, and we have been doing our everlasting best to redeem those promises, and it seems to me that we are entitled to a fair share of the praise.

It looks like we are stuck here until the 4th of March. If that is true, I will not be able to get home at all to participate in the campaign, which I regret exceedingly, for I would like to get among the good people of the ninth district and find out what they think and what they want. If we do not get away, I can not participate in the campaign at all and must depend entirely upon my friends for reelection, except what little I can do from here; but I have abiding faith in the justice and good sense of the people of that district, and if they go to the polls I have no doubt about my reelection.

URGES ALL TO GO TO POLLS.

Votes are the thing that count in an election, and the various committees and other people interested in the election will have to see to it that the voters are at the polls.

Anybody that has paid the slightest attention to figures knows that Missouri is an exceedingly close State. Overconfidence has lost more battles of every sort than any other cause since the world began, so I hope that our friends will see to it that the voters go to the polls.

Your friend, CHAMP CLARK.

The Late Representative Timothy D. Sullivan, of New York.

MEMORIAL ADDRESS
OF
HON. JOHN J. FITZGERALD,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Sunday, June 21, 1914.

The House had under consideration the following resolutions (H. Res. 540):

"*Resolved*, That the business of the House be now suspended, that opportunity be given for tribute to the memory of Hon. TIMOTHY D. SULLIVAN, late a Member of this House from the State of New York.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased.

"*Resolved*, That at the conclusion of to-day's proceedings the House, as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career, do stand adjourned."

Mr. FITZGERALD. Mr. Speaker, among the oldest customs of this House is that of commemorating the lives, character, and public services of men who die while serving in its membership. However this custom may have originated, it is particularly appropriate that it should be perpetuated and followed by the House. In this era public men are subjected to so much criticism, and so much evil is attributed to them, so many sinister motives are charged as characterizing their every public act, that it is highly fitting that their intimate associates in public life should at some time make a record of the good things for which such men have been noted and the good they have been able to accomplish.

It is difficult for anyone who is not familiar with the complex life of the great metropolis of this country to understand and appreciate such a character as the late TIMOTHY D. SULLIVAN. Many of those living to-day in the great city, unfamiliar with the conditions prevailing 30, 40, or 50 years ago, can have little understanding of the influences that not only made possible but imperatively forced such a man into domination in political affairs. New York is a great cosmopolitan community, to which come the poor and the oppressed from every clime in the civilized world. They naturally seek the help, friendship, and the assistance of some strong, dominant personality.

Mr. SULLIVAN was born in the lower part of the city of New York, but his activities were identified with the lower East Side, a section of the city much discussed but so little understood by idealists who attempt the impossible in the reformation of human nature. He was brought up in a school where strong men naturally force their way to the front. A man of great courage, of big heart, of winning personality, with sympathy always ready to extend to the unfortunate and the oppressed, he very quickly attracted to himself the loyal support of many persons who, indifferent to his political views, were attached to him because of the innumerable secret kindnesses which were extended through his bounty.

It is somewhat interesting to recall that the elements of his strength and his wonderful power in the politics in the city of New York were due to the same characteristics and conditions that first made Tammany Hall a dominant political force in that city.

The Columbian Order or Tammany Society was organized in 1789. It is a charitable and a patriotic society. Its purpose is to inculcate deeply in the hearts of the people the principles on which our Government is founded, to cultivate the patriotic spirit, and to help those who are unfortunate or in distress. From the early days in the history of the country the society was noted for the patriotic part it took in the effort to have suitable burial provided for the remains of the men known as the martyrs of the prison ships who, during the Revolutionary War, were taken prisoners by the British Army and imprisoned in a number of old sugar-cargo ships that were anchored in what is known as Wallabout Bay, the site of the present navy yard in the city of New York. By degrees this society, because of its patriotic aspirations and its lavish charities, attached to itself an innumerable following. It was the wonderful genius of Aaron Burr which first appreciated the political possibilities attaching to an organization that had so great a hold upon the ordinary people of the community and realized that such a society could be instrumental and dominant in the political affairs of the community. If I recall correctly, although he was neither a grand sachem nor a sachem, nor even a member of that organization, by association and affiliation with the dominant spirits in it he repeatedly utilized his friendships with such men so that the society exerted considerable influence in political affairs.

Mr. SULLIVAN lived in accordance with this traditional spirit of the organization. The poor, the oppressed, those in distress in that great lower east-side section of the city of New York knew that he was a friend, one to whom an appeal was never made in vain.

In that wonderful community, with its magnificent businesses, its temples, its palaces, its culture, its refinement, and its wealth, the flotsam and jetsam of humanity is there cared for by wise dispensations of official and private organizations, but much of the distress is seldom reached except through the individual effort of some one in whom these derelicts of human nature have unbounded confidence. His was a charity that was not openly and publicly displayed. While there were innumerable ways in which he participated in the open and known charities, it was through the quiet and secret kindnesses that he extended to the distressed and the unfortunate, that a great body of men and women and children came to love him and respect him as their friend. A member of the Tammany Society and a member of what is known to-day as Tammany Hall—which, although it comprises in its membership the officials of the Columbian Order or Tammany Society, is still the term which is properly attributed to the official organization of the Democratic Party in the county of New York—his power and influence grew as his life was extended along the lines of somewhat useful endeavor. At the very outset of his career he was a power in local politics. He served eight or nine years in the lower house of the Legislature of the State of New York. He served a number of years in the senate of the State of New York. He was elected to this House, retired, and reelected. Perhaps not many outside of his colleagues from his own State and those who had met him in other fields had become acquainted with him in this House. This was not his field. He was successful in the other bodies in which he had served, because his peculiar talents, his indefatigable industry, and his intimate knowledge of the business transacted by those bodies made him an effective and influential member of them.

It is true, as has been said, that the good that men do is interred with their bones while the evil, if any, lives after them.

Judged by many standards Mr. SULLIVAN perhaps might not satisfy those who could not appreciate the peculiar conditions under which he had lived and worked. He acquired great political power in his community and in the organization of which he was a member, and it was due to the peculiar characteristics for which he was noted and without which no man can attain to political power in that organization and retain it, or attain power in politics in the great city of New York and retain it. Perhaps the chief of these characteristics is that a man must be truthful. TIMOTHY D. SULLIVAN was a truthful man. He hated sham, and he avoided it. He was noted for his truthfulness of statement and with the accompanying and necessary corollary that his word, when once given, was better than any bond or other security. Once his word was pledged there was nothing that would induce him to break it. There was a story current in New York that illustrates that characteristic of the man. Within a not very distant past and under conditions with which I am somewhat familiar, it is said that he had pledged his word to an important official to aid in preventing the nomination of a certain person for a high position in our State. The official to whom the assurance was given was so doubtful of the sincerity of the pledge that Mr. SULLIVAN remarked that if this man were nominated he would not be a candidate upon the same ticket with him. In the course of a few months the person discussed was nominated for the office mentioned, and the official to whom the statement was made reminded Mr. SULLIVAN of his promise. He thereupon declined to be a candidate for the State senate. The situation occasioned considerable curiosity and amazement. Those who claim to know the real facts insisted that it was merely an ordinary act of Mr. SULLIVAN in keeping his word regardless of the effect upon himself personally.

In political life in the city of New York there is not much else that men have upon which they can build their reputations and acquire power except the reputation for veracity, the knowledge that their plighted word is sacred, and an unswerving loyalty to their friends and associates. Whatever the turn of the wheel of fortune may be, men like Mr. SULLIVAN remain loyal to their friends. No matter what trouble overtakes them, no matter what criticism is provoked, no matter what personal sacrifice may be necessary, they are loyal to their followers and to their friends. My experience in politics leads me to believe that it is the very best and the most essential characteristic for success in public men. We frequently see the cold, selfish, keen, able man ready to sacrifice everyone and every principle that contributes to his success so long as his advancement will be furthered; but the rare and enduring characteristic of the men of lasting power and influence in public life is the strong sense of loyalty always in evidence, which makes their friends, their associates, and their followers know that they will not be deserted in the time of travail and trouble. Mr. SULLIVAN was a big man. The popular nickname indicated the feeling of the people generally. He was "Big Tim." He was big physically, big hearted, big in his sympathies for the unfortunate, for the distressed, and big in the desire to serve and to advance the welfare of his fellow man. This virtue has seldom been attributed to him. He was the subject of vicious criticism. His faults—and he had them, as his friends know—were continually emphasized; but he was a humane man, with a great, large, overflowing heart. His memory is cherished sacredly in many humble homes where he has been of inestimable service. No one will ever know the number of young men and young women whom he has saved from a life of distress and of crime.

His helping hand was ever ready to lift up the unfortunate. He did not push them back because they had once erred. He knew his great East Side as few men knew it, and its people appreciated the better qualities which made up his personality.

Others of my colleagues will speak in more detail of his services to his country. Perhaps one of the last and most noted acts in his official career was the passage of a law which has been much discussed in our State. One of the things that contributed much to the misfortune and to the crime of the city of New York was the growing tendency upon the part of young men and of older men in certain sections in the city to acquire the habit of carrying firearms. Knowing the result that inevitably follows the carrying of firearms by men of quick temper and quicker impulses and passions, he had enacted a law which he hoped would eliminate that evil from our civil life. Others may point out some of the many other acts of legislation for which he was responsible, but this one sought to reach a widespread evil which few men who are aspiring to statesmanship would have considered and but few would have known how to remedy. I knew Mr. SULLIVAN for 25 years. I became acquainted with him when I was quite a young man and I got to know him intimately. I learned to know and to love the good qualities and the good parts in his make-up. His memory is properly revered. The good which he has done should be emphasized and praised. We can kindly and in charity do what we all hope will be done when we pass away—draw a veil to cover whatever defects there may be in our lives—and we can join with those who have reason to cherish his memory in paying this brief tribute to the personality and character of a man who under the most disadvantageous circumstances rose to power, influence, and domination in the great metropolis of this country, and who in a quiet but effective way rendered many valuable services and kindnesses to many who would otherwise have been neglected.

Cotton.

EXTENSION OF REMARKS
OF
HON. CHARLES G. EDWARDS,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 21, 1914.

Mr. EDWARDS. Mr. Speaker, several weeks ago, when it was apparent that the war in Europe would destroy the prices of cotton, I introduced a bill authorizing the Government to make loans directly to cotton producers upon cotton as a collateral. The bill I introduced is very similar to the Henry bill. My bill provides for the issuance of $500,000,000, to be loaned to the farmers of the country, and fixes a loan value of not less than 10 cents per pound on short or upland cotton and a loan value of not less than 25 cents per pound on long or sea-island cotton. The language of the bill is very clear, and, in my opinion, this would solve the cotton question if it were enacted. The bill is as follows:

A bill for the temporary relief of cotton growers in the United States.

Be it enacted, etc., That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in the following States, to wit: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia, $500,000,000, to be advanced to the producer of cotton, or owner of lands upon which the same was produced, at a rate of interest not exceeding three per cent per annum. The deposits herein authorized shall be advanced upon the terms prescribed in this act. The deposits herein authorized shall be apportioned among the several States above mentioned in accordance with the number of bales of cotton produced therein during the year 1913, as ascertained by the Department of Agriculture.

SEC. 2. That the Secretary of the Treasury shall immediately cause to be prepared United States notes to the extent of $500,000,000, to be used for the purpose of making the deposits in compliance with this act; and said notes shall have all the legal qualities of the United States notes now outstanding and shall be of such denominations as the Secretary of the Treasury may prescribe: *Provided*, That all United States notes deposited under this act and not used as prescribed herein shall be returned to the Secretary of the Treasury and shall be canceled.

SEC. 3. That when such deposits shall have been so made as prescribed in section 1, the said banks are hereby authorized and directed to pay out the same as follows: Whenever any producer of cotton or owner of lands upon which the same was produced shall present to the national banking association or State bank within which State the said bank may be situated a bill of sale in writing to cotton in bales grown in 1914, in such form as may be prescribed by the Secretary of the Treasury, said bill of sale to be signed and sworn to by the producer or person upon whose land the same was produced, giving the number, mark, weight, classification, and location of said cotton, it shall be the duty of said banks to advance a part of said deposits on said cotton at not less than 10 cents per pound for middling upland cotton and not less than 25 cents per pound for sea-island cotton.

SEC. 4. That thereupon title to said cotton shall pass to and be vested in the national banking association or State bank making the advances. The said bank receiving such deposits shall pay the same over to the producer, or person upon whose land the same was produced, and shall thenceforward hold said cotton as custodian, with the right and power to appoint as many deputy custodians, with actual possession, as said custodian may deem proper and necessary; and among said deputy custodians may be included the producers of said cotton or owners of the land upon which the same was produced, said custodian to take in all cases from the deputy custodian a forthcoming bond and an acknowledgment in writing of the facts that said deputy custodian holds the same as custodian of public property with the common-law liabilities of warehousemen. The bank acting as custodian shall keep all cotton so held insured against loss by fire, loss, if any, payable to the said national banking association or State bank, and shall keep a correct and itemized account of insurance and storage actually paid; and upon the sale of said cotton, as hereinafter provided, shall have said expenditures refunded, together with interest on the same at the rate of 6 per cent per annum. Payments of insurance and storage are to stand, until paid, in the nature of an obligation of the United States. When said cotton is sold, as hereinafter provided, said bank shall, in addition to the refunding just provided for, be paid for its labor and services as custodian 50 cents per bale, and as custodian shall be responsible only for gross negligence or breach of trust. All cotton upon which advances have been made, as hereinbefore provided, with such deposits, shall be and remain the property of said bank until sold, at the pleasure of the Secretary of the Treasury, when and after middling upland spot cotton sells in the open market at Savannah, Ga., at 12 cents per pound, and when sea-island cotton sells at 28 cents per pound in the same market, or upon request of the person or persons from whom title passed to the national banking association or State bank.

SEC. 5. That whenever the said bank, under the conditions named in the foregoing section, shall sell said cotton, interest shall be calculated on the original sums advanced by the bank at the rate of 3 per cent per annum, and principal and interest shall be remitted to the Secretary of the Treasury. The custodian shall prepare under oath and furnish the Secretary of the Treasury an account showing the amounts actually paid for insurance and storage and interest thereon, as hereinbefore provided, and also showing its compensation as herein allowed. These items the custodian shall retain to pay itself, and the balance of the proceeds arising from the sale of said cotton shall be paid over to the producer or person upon whose land the same was produced, and from whom title passed to the said bank, or to the legal representative of such person receiving such loan.

SEC. 6. That this act shall take effect and be in force upon its passage.

SEC. 7. That this act shall expire by limitation on the 30th day of June, 1916.

My bill, along with the many others on the same subject, was referred to the Committee on Banking and Currency. No action was taken on these cotton-relief bills by the committee.

On the night of the 8th of this month very nearly all of the Members of Congress from the Southern States met in conference in the majority room in the House Office Building and practically all of us agreed upon a bill which we would support. This bill that we agreed upon contains some of the provisions that were in my bill, and, in fact, closely follows in its general purpose the Henry bill, which has been urged by the president and legislative committee of the farmers' union, and which had met with the approval of other leading agricultural representatives from the South. While, of course, I much preferred the bill I had prepared and which I have quoted above, at the same time I was willing to make any reasonable concessions in order that we might get together upon some specific proposition to offer in the House which the southern Members could and would support. The bill we agreed upon in the conference I have just referred to is House bill 19200, and is as follows:

That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in States producing cotton or tobacco, or both, $250,000,000, or so much thereof as may be necessary to carry out the purposes of this act and under the terms and conditions herein prescribed, to be loaned by said banks to the producers of cotton or tobacco, or owners of lands upon which the same was produced during the year 1914, at a rate of interest not exceeding 4 per cent per annum. The deposits herein authorized shall be advanced upon the terms prescribed in this act and under rules to be prescribed by the Secretary of the Treasury. The deposits herein directed to be made shall be apportioned among the several States in accordance with the number of bales of cotton and pounds of tobacco produced therein during the year 1913, as ascertained by the Department of Agriculture.

SEC. 2. That the Secretary of the Treasury shall make and enforce rules and regulations not inconsistent herewith for carrying out the purposes of this act. Said Secretary of the Treasury may fix the compensation for the banks for their services in lending said sums of money.

SEC. 3. That the Secretary of the Treasury shall, in his discretion, either immediately cause to be prepared United States notes to the extent of $250,000,000 to be used for the purpose of making the deposits in compliance with this act, which said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe; or he may sell not exceeding $240,000,000 of Panama Canal bonds, heretofore authorized by law, at a rate of interest not exceeding 3½ per cent per annum, and the act or acts heretofore passed authorizing the disposition of said bonds are hereby amended so as fully to authorize the disposition and use of such bonds as herein prescribed; or, in his discretion, the Secretary of the Treasury may use both the proceeds of the bonds and the notes in order to carry out the purposes of this act, not to exceed in the aggregate $250,000,000: *Provided*, That such United States notes, should the Secretary of the Treasury conclude to issue them, deposited under this act and not used as prescribed herein, shall be returned to the Secretary of the Treasury and shall be destroyed.

SEC. 4. That this act shall take effect and be in force from and after its passage.

SEC. 5. That this act shall expire by limitation on the 31st day of December, 1915.

Under the rule, we are to vote upon still another proposition, but which has the same general purpose, being an amendment offered by Mr. HARDWICK, which is as follows:

Add the following at the end of section 2:

"SEC. 3. That the Secretary of the Treasury shall deposit in national banking associations and in State banks situated in States producing cotton or tobacco, or both, the sum of $250,000,000, or so much thereof as may be necessary, to carry out the purposes of this act. The said Secretary shall make such deposits under the terms of this act and under such rules and regulations as may be prescribed by him to carry out this act. The deposits herein directed to be made shall be apportioned among the several States in accordance with the number of bales of cotton or pounds of tobacco produced therein during the year 1913, as ascertained by the Department of Agriculture. The Secretary of the Treasury, in lieu of the securities he is now authorized or required by law to exact of the banks in which the funds of the United States are deposited, is authorized and hereby directed to accept as security for the deposits directed to be made in this act cotton warehouse and tobacco warehouse receipts, where the cotton or tobacco thereby represented has been fully insured, at a valuation that represents the fair market value of the cotton or tobacco covered by such receipts. The deposits herein directed to be made shall be made only on the condition that the banks accepting such deposits will loan the same, under reasonable terms and conditions, at a rate of interest not to exceed 4 per cent per annum, to the producers of cotton or tobacco, or the owners of lands upon which the same was produced during the year 1914, and the said Secretary of the Treasury is hereby authorized to make all necessary rules and regulations concerning the terms and conditions under which these deposits shall be loaned by the banks that accept the same.

"SEC. 4. That the Secretary of the Treasury shall, in his discretion, either immediately cause to be prepared United States notes to the extent of $250,000,000 to be used for the purpose of making the deposits in compliance with this act, which said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe, and said notes shall bear interest at the rate of 2 per cent per annum from the date of their issuance and shall be payable in gold coin of the United States or its equivalent on January 1, 1916; or he may sell not exceeding $240,000,000 of Panama Canal bonds, heretofore authorized by law, at a rate of interest not exceeding 4 per cent per annum, and the act or acts heretofore passed authorizing the disposition of said bonds are hereby amended so as fully to authorize the disposition and use of such bonds as herein prescribed; or in his discretion, the Secretary of the Treasury may use both the proceeds of the bonds and the notes in order to carry out the purposes of this act, not to exceed in the aggregate $250,000,000.

"SEC. 5. That the Secretary of the Treasury shall not require the repayment of any deposit made under the provisions of this act prior to December 31, 1915.

"SEC. 6. That when the deposits herein authorized are called in by the Secretary of the Treasury the same shall be and become a part of a special fund, to be kept and held separate and apart from the general funds of the Government, for the redemption and retirement at maturity of the Panama Canal bonds in such cases and to such extent as the proceeds of such bonds have been used to make the deposits herein provided."

While I favor, first, my own bill, secondly, the bill we agreed upon in conference, yet there is no chance for a vote on either of these propositions under the parliamentary situation. The Hardwick amendment has the same general purpose, namely, to relieve the distress in the South. I heartily favor the amendment and hope that it will pass. I appeal to our friends from the North, the East, and the West to join hands in this patriotic movement that has as its purpose to prevent wreck and ruin in the cotton-producing States. It is not sectional in its purpose, nor will it be sectional in its effect—this is not a sectional or local question, but, to the contrary, it is a national question and world-wide in its importance—and if it is enacted it will not only save the day for the South, but it will prevent many a "tight squeeze" in financial matters in every quarter of the United States.

The world-wide importance of cotton is beautifully, eloquently, and clearly set forth in the imperishable words of the late and beloved Henry W. Grady, of Georgia, as follows:

What a royal plant it is! The world waits in attendance on its growth. The shower that falls whispering on its leaves is heard around the earth. The sun that shines on it is tempered by the prayers of all people. The frost that chills it and the dew that descends from the stars is noted, and the trespass of a little worm on its green leaf is more to England than the advance of the Russian army on her Asian outposts. It is gold from the instant it puts forth its tiny shoot. Its fiber is current in every bank, and when loosing its fleeces to the sun it floats a sunny banner that glorifies the field of the humble farmer;

that man is marshaled under a flag that will compel its allegiance of the world and wring a subsidy from every nation on earth. It is the heritage that God gave to this people forever as their own when He arched our skies, established our mountains, girt us about with the ocean, loosed the breezes, tempered the sunshine, and measured the rain. Our's and our children's forever. As princely a talent as ever came from His hand to mortal stewardship.

It has been claimed by certain gentlemen that there is no precedent for the step we are asking to be taken. They are mistaken in this. They are also mistaken and ungenerous in the statement that the South is asking charity. The South is not asking for a gift. She is merely asking that certain funds be deposited in southern banks, with the understanding that those funds are to be loaned upon cotton as collateral, in order to relieve the greatest distress that our people have known since the War between the States.

No one can truthfully deny that this is an emergency; no one will attempt to assert it is not a serious condition that needs relief. I cite here several cases in which the Government has gone much further than we are asking in order to give relief, and none of the cases are stronger than the one that now engages our serious consideration:

Statement of emergency and special relief appropriations made by Congress, fiscal years 189½ to date.

Payments on account of Ford's Theater disaster:		
1895	$125,009.00	
1896	131,850.00	
1898	34,755.00	
1900	5,000.00	
1915	1,000.00	
		$297,605.00
Relief of people in mining regions of Alaska, 1898		200,000.00
Relief of sufferers from wreck of United States steamers at Apia (indefinite appropriation for year 1891):		
1894	$308.77	
1896	1,125.75	
1897	447.45	
1898	270.25	
		2,152.22
Recovering remains of officers and men and property from wreck of U. S. S. Maine, 1898		200,000.00
Removal of remains of officers and men who perished by destruction of U. S. S. Maine, 1898		10,000.00
Relief of sufferers by destruction of U. S. S. Maine (indefinite):		
1898	$83,358.19	
1899	34,074.73	
1900	5,733.00	
1901	192.00	
1902	660.00	
1903	432.00	
		124,449.92
Relief of destitute American citizens in Cuba, 1897		50,000.00
Relief of sufferers from overflow of Mississippi River, etc., 1897		200,000.00
Tents for sufferers from floods in Mississippi Valley:		
1897	$7,837.97	
1899	329.55	
1902	42.26	
		8,209.78
Transporting contributions for famishing poor of India (indefinite):		
1900	$20,000.00	
1901	20,000.00	
		40,000.00
Transportation of destitute miners from Alaska, 1901		920.00
Relief of citizens of the French West Indies, 1902		200,000.00
Supplies furnished destitute natives of Alaska during an epidemic in 1900, 1904		26,913.40
Payment for losses in suppressing bubonic plague, Hawaii, 1903		1,000,000.00
Relief of distress in the Philippines, 1903		3,000,000.00
Transportation of destitute citizens from Alaska, 1903		13,690.10
Relief of sufferers from earthquake, Pacific coast, 1906		2,500,000.00
Relief of sufferers from cyclone in Southern States, 1908		250,000.00
Relief of sufferers from earthquake in Italy, 1909		800,000.00
Protecting lands and property in the Imperial Valley, Cal., 1911		1,000,000.00
Relief of sufferers from famine in China, 1911		50,000.00
Relief of sufferers from floods in the Mississippi and Ohio Valleys:		
1912		1,239,179.65
1913		4,500.00
Fighting and preventing forest fires in emergency:		
1912	$1,000,000.00	
1913	200,000.00	
1914	200,000.00	
1915	100,000.00	
		1,500,000.00
Relief of sufferers from volcano, Kodiak, Alaska, 1913		30,000.00
Transportation of refugee American citizens from Mexico, 1913		100,000.00
Investigating claims of American citizens for damages, insurrection in Mexico, 1913		5,000.00
Relief of sufferers from flood in Allegheny River in 1907, 1913		17,577.88
Relief of flood sufferers in Ohio and Indiana and on Ohio and Mississippi Rivers, etc., 1914		130,940.38
Relief of sufferers from floods, tornadoes, and conflagrations in the Mississippi and Ohio Valleys, etc., 1914		654,448.49
Transportation and caring for interned Mexican soldiers and military refugees:		
1914	$500,000.00	
1915	170,000.00	
		670,000.00
Relief and transportation of destitute American citizens in Mexico, 1914		$240,152.47
Relief and transportation of American citizens in Mexico, 1914		500,000.00
Relief of sufferers from fire at Salem, Mass., 1915		200,000.00
Relief, protection, and transportation of American citizens in Europe, 1915		2,750,000.00
Representation of interests of foreign Governments growing out of hostilities in Europe, etc., 1915		1,000,000.00
Under act authorizing the establishment of a Bureau of War-Risk Insurance in the Treasury Department (Public, No. 193, Sept. 2, 1914), 1915:		
Salaries and expenses, Bureau of War Risk Insurance	$100,000.00	
Losses on war-risk insurance of American vessels, their cargoes, etc	5,000,000.00	
		5,100,000.00
Estimated additional expenditures on account of occupation in Mexico:		
Army	$3,730,000.00	
Navy	291,000.00	
		4,021,000.00

Not only have relief measures been passed by Congress, but time and time again under this and previous administrations the funds of the Government have been placed in banks in various sections of this country to avert panics and serious business crashes. Now, that the South in its hour of greatest need has asked that funds be sent to that section to help our people, gentleman halt for the lack of precedents and talk about "safe" and "sane" plans. They shelter behind the convenient dodge of "questionable constitutionality." If it were the North, East, or West, these same gentlemen would not be found "balking," nor would you find the southern Members of Congress "dodging" and hunting for excuses to keep from helping a stricken section of our great common country, but you would find the southern Members, as they have been found in the past, standing by measures that would give relief.

The principal cotton-growing States have a population of over 20,000,000 people, and the crop of cotton affected is worth over a billion dollars, as is shown by the following table:

Population of cotton-growing States, as returned at the census of 1910.

State.	Population.	Value of crop.
Principal cotton-growing States:		
Alabama	2,138,093	$110,000,000
Arkansas	1,574,449	77,000,000
Georgia	2,609,121	173,000,000
Mississippi	1,797,114	96,000,000
North Carolina	2,206,287	60,000,000
Oklahoma	1,657,155	61,000,000
South Carolina	1,515,400	103,000,000
Tennessee	2,184,789	27,000,000
Texas	3,896,542	287,000,000
Louisiana	1,656,388	32,000,000
Total	21,235,338	1,026,000,000

From this table it will be seen that in the State of Alabama there is a population of 2,138,000 and an annual income from the cotton fields of $110,000,000.

Arkansas, with a population of 1,574,000, has an annual income of $77,000,000.

Georgia, with a population of two and a half millions, has an annual income from this source alone of $173,000,000.

Mississippi, with a population of one million and a half, has an annual income of $96,000,000.

North Carolina, with only a part of her territory planted in cotton, with a population of two and a half millions, has an annual income of $60,000,000.

South Carolina, with a population of one and a half millions, has an annual income of $103,000,000.

Tennessee, with only a small portion of her territory planted in cotton, has an annual income of $27,000,000; a population of 2,184,000.

The State of Texas, with 3,800,000 people, has an annual income of $287,000,000, and a like pro rata in the different States, making a total of $1,043,000,000 annual income.

This war, that is the most horrible history has known, has paralyzed business in many ways. It has destroyed the demand for cotton, and there is no market or price for it. With over a billion dollars taken away from our people, leaving them in debt, and in many cases in dire want, the condition is too horrible to conceive. I can not understand how Americans can oppose this proposition, which is one not only to relieve the South, but for the benefit of our whole country. Over two-thirds of our cotton is exported. The countries that use this cotton are now engaged in war, and they do not want nor can they use the cotton. Conditions that are responsible for our sad plight arose without notice to us, and we have no control over those conditions. It is believed that if our country will come to the relief of its citizens and enable them, through per-

fectly legitimate banking and business, to hold a great part of the cotton crop that the market will be steadied and better prices will result.

If the South ever needed the aid of an administration, it needs that aid now. The solid South was the backbone of the movement that made the present Democratic administration. The South gets no consideration under Republican administrations, because such administrations owe the South nothing. Now, shall it be under a Democratic administration that the South will not get due consideration because the South is with the administration and is solidly Democratic, whether it is given relief or not?

Certain gentlemen on the Republican side have tried to inject petty politics into this matter and have tried to argue that the depression has been caused as a result of the tariff. Everybody knows that the war in Europe, and that alone, is responsible for the disturbance in business and for the low prices of cotton. Certain demagogues in the South are trying to hold southern Members of Congress responsible for not getting through legislation. No men were ever more patriotic or untiring in their efforts to get at a solution of this matter than we have been, and the record on this vote will show where every man stands, and the record will show even a fool why it is that we have been unable to get legislation. The southern Members and Senators have stood together and worked faithfully, but we are but a small part of the whole Congress. Out of 435 Members of the House only about one-fifth of them come from cotton-producing States. Out of 96 Senators only about 20 come from cotton-producing States. Let the blame fall where it belongs. Give every man credit with what he is entitled to.

Too long has the people's money been used for stock speculations and Wall Street transactions. If great shipments can not be made to Wall Street, there are those selfish individuals who will not let it go elsewhere, while there are those, too, who believe that for a dollar to be valid money it must first be sent to New York and circulated from there at high rates of interest. Even when Tennessee wanted a loan the Treasury Department placed the funds, or a large part of them, in a New York bank, so that the transaction could pass through New York banks. The people have submitted too long and too patiently to such proceedings, and to-day you will find the sentiment of the New York Members, almost to a man, against the proposition, before the House, intended to relieve the South.

This is a matter that should appeal to the sympathy and conscience of gentlemen. Those gentlemen who are talking about "safe" and "sane" propositions, who are not supporting this because they do not think it "sound," offer nothing in its place. Let them propose something that is "safe" and "sane." This proposition is "safe," "sane," and sound. It will give relief, and God knows that relief can not come too soon, for already our people have suffered and lost beyond description.

I appeal to Members not to deny us this relief, for which there are plenty of precedents. Congress ought not to adjourn, and I will vote against adjourning until some measure of relief is given the South.

The Famous Race Between the "Lee" and the "Natchez."

EXTENSION OF REMARKS

OF

HON. BENJAMIN G. HUMPHREYS,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 22, 1914.

Mr. HUMPHREYS of Mississippi. Mr. Speaker, in 1870 the Mississippi River was in many respects the greatest highway of commerce in all the world. The great passenger steamers which plied it then were a part of the life of the valley people. The *Katie*, the *Pargoud*, the *Lee*, the *Natchez*, and many other veritable floating palaces held a place in their hearts and affections difficult now to understand. In the evolution of things, under the new dispensation, they have all passed away, but the story of the days of their glory is still a theme to conjure with when told by the lessening few who lived them, and whose pulse beats are quickened even now by the flood of memories which the bare mention of these old names revives.

These are the ones I really had in mind when I asked consent to print the articles from the Waterways Journal, but the story of the great race which stirred the whole valley to a pitch of excitement unequaled by any prior or subsequent event is well worth the perusal of the student who would understand the vital and intimate relation which the river bore to the daily lives of the people up to a quarter of a century ago.

The articles referred to are as follows:

THE FAMOUS RACE BETWEEN THE "LEE" AND THE "NATCHEZ."

(By Capt. Wes. Connor, pilot of the *Lee*.)

[Reprinted from the Waterways Journal, December 13, 1913.]

NEW ALBANY, IND., *August 10, 1906.*

"Remember '70? Well, yes! People that's been excited about that race of the German liner *Deutschland* and the Frenchman *La Provence* across the eastern duck pond perhaps forget about the *Lee* and the *Natchez*," said Capt. Wes. Connor to a New Albany (Ind.) paper.

Old "Cap" Wesley Connor, who, according to the newspaper reports out of New Albany, has been sort of lingering around death's door for about three years, but is still here, peered out in front of him as he did out of the pilot house of the *Robert E. Lee* 36 years ago when he stuck her nose out into the Father of Waters and started her from New Orleans in the greatest race in the history of American "riverin'."

"There she goes, guided by a tiller that obeyed a whisper; had a prow like the beak of an eagle. She split the water between New Orleans and St. Louis quicker than it was ever done before or since. And back there was the *Natchez* taking our smoke, it is true, but a racer just the same. Remember '70? Huh!"

Thirty-six years ago, on the last of June, the wharves and Canal Street in New Orleans were crowded with people. At last the question that had taken the place of political and reconstruction debates along the river from New Orleans to St. Louis and up the Ohio from Cairo to Cincinnati was to be settled. Smoke was belching from the smokestacks of the *Robert E. Lee* and the *Natchez*, and their fires were roaring and crackling most unusual. Which would get to St. Louis first? How long would it take? Money piled up "mountain high" in the old Hawkins clubroom, the great hang out of the rivermen at New Orleans, showed that there was a division of opinion among them and that they were willing to back their various opinions.

The Hawkins Club betting board only reflected the interest of the Mississippi Valley. The fires that lighted the night courses of the racers on both sides of the river from New Orleans to St. Louis, the cannon that thundered salutes from every town and city, the people that gathered along the course, both day and night, to see the racers pass, and the crowded trains that were run from Cincinnati, New Albany, and Louisville to Cairo to see the boats reach that point, all gave but slight indications of the widespread interest that centered in the race.

It was especially intense here—the home of the *Lee*. Here she was built; here she was manned—yes, and here she was wrecked—wrecked a quarter of a mile downstream from the Southern Railroad station and within a few feet of where she was built. This was the way the race came about: The *Lee* was known as "the New Albany boat." She had been built here in 1866 for Capt. John W. Cannon by Capt. John C. Howard—who died across the river last November—for the trade between St. Louis and New Orleans.

EXCITED JEALOUSY.

The *Lee* had not especially been built for speed but for the straight passenger and freight business. The idea that was preeminent in her construction was that she could be easily handled. It did not take more than one or two trips, however, to show that she was much faster than the average steamer on the Mississippi, and her speed soon began to attract attention and to arouse the envy of the managers and owners of opposition boats.

She passed every craft afloat on the river. Finally this became unbearable to Capt. Thomas P. Leathers, of New Orleans, who was in command of the principal competing steamboat line in the Mississippi River trade, and who finally declared that he would have a boat built that would swim little circles around the *Lee* while the latter was under full head of steam.

Leathers was considerable of a blusterer, and he aroused the ire of New Albany, the birthplace of the pride of the river, by ridiculing her shipbuilding geniuses. Declaring he would not have a skiff built here, he passed up the river to Cincinnati where he let the contract for the boat that was to make the *Lee's* speed look like a canal-boat pace. He placed his contract with Perry Thorpe, who added to the fuel that was burning in the proud hearts of New Albany people by declaring that he "would build her fast enough to pass the *Lee* or he would not charge a cent."

The *Natchez* in due time was brought into service and was put into the trade. Both boats had been running on the Mis-

sissippi several months, and the discussion over which was the faster spread out from centers such as New Albany, New Orleans, Memphis, Natchez, Cairo, and St. Louis all over the country. Finally the boats landed in New Orleans together, and were scheduled to leave New Orleans for St. Louis on the afternoon of June 30.

The crowd that flocked to the wharves and filled Canal Street was divided in sentiment. Business generally was suspended in and around New Orleans, and, besides the crowd that gathered on the wharf and in Canal Street, thousands flocked to the levees upstream or had gone up the river on excursion boats to see the racers under headway.

INTERESTING CROWDS.

Every movement of the muddy-water greyhounds was closely watched by the crowd, which divided its cheers for Capt. Cannon and Capt. Leathers and for the pilots, Wesley Connor and James Pell, of the *Lee*, and Frank M. Cayton and Morgan (Dad) Burnham, of the *Natchez*, whenever they appeared. Connor was widely known as the man who had started the *Shotwell* on her trip from New Orleans to New Albany, when she beat the *Eclipse*. Pell was also noted as the old pilot of the famous *Robert I. Ward*. The records show that there was absolutely no excitement on the *Lee*, while, on the contrary, there was more or less nervousness on the *Natchez*.

Neither boat had any cargo except its fuel, largely made up of pine knots. On the bowsprit of the *Lee* was an iron mule bearing the inscription, "Shoo, fly, don't bother me." The captain of the *Natchez* also fastened a tin mule to her bowsprit, with the inscription, "We brush the flies as we go by."

It was shortly before 5 o'clock when the bells in the engine room of the *Lee* clanged nervously. Then followed a swift movement on the part of the negro deck hands. The great wheels revolved, and at 4 minutes before 5 the *Lee* swung out into the stream, and, pointing her nose up the river, started on what proved to be probably the most noted race of any kind in the history of this country up to that time.

Scarcely had the *Lee* started on her trip when there was another clanging of bells, and the crowd of people began to cry, "Look! Look!" There was the majestic *Natchez* backing out. Like the *Lee* her nose was pointed north in a short time and she began to spill the waters. It was a race from the first. The start was ideal. The two boats plowed past St. Marys Market—from which point all boats took their time—and the *Lee* as she passed fired her gun at precisely 4 minutes past 5. The *Natchez* boomed her parting salute at precisely 7 minutes after 5. The two boats passed the excursion steamers as if they had been shot out of a cannon. Between two points of observation it was discovered that the *Natchez* had gained eight seconds, and this caused bets of odds on the *Natchez* being made, though up to this time the *Lee* probably had a slight lead as the favorite.

For four days and four nights the country, and especially New Albany, had its center of attention on the Father of Waters. The excitement along the Mississippi was intense. At all times on the 1,200-mile dash people stood on the banks and waved banners and handkerchiefs or built great bonfires or fired cannon. From the time the smoke of the racers could be seen down the river until they passed business was practically suspended in Vicksburg, Memphis, Cairo, and other cities and towns along the river, and there was no work on the plantations miles back from the stream.

AT NATCHEZ PEOPLE WEPT.

Of course at Natchez, the first city on the race course, the feeling was almost unanimous in favor of the steamer that had been named for the city. A magnificent pair of elk horns had been purchased, to be presented by the mayor to the captain of the steamer when she should win the race with the *Lee*, which the Natchez people were confident she would do. For weeks the horns had been displayed conspicuously on the city wharf, and had especially been displayed to the officers and owners of the *Lee*.

Natchez was in celebration; the boats were expected to arrive before noon. A band played, cannon were loaded, and there was great excitement, when the smoke of the approaching racers was seen down in the timberland. The sight was pathetic as the *Robert E. Lee* poked her nose into view; and as she went by the wharf boat like a frightened swan Capt. Cannon, who stood well forward with a grin on his face, shouted to the wharfmaster, "Take down those horns." He was greatly surprised when his order was promptly obeyed. The people cried, the band did not play, and the cannon were not fired.

Ah, but it was a race though. There was the *Natchez* splitting the water just behind the *Lee*, though 17 hours had passed since the boats had left New Orleans. According to the official record kept by John Kouns, of the *Lee*, the *Natchez* had only fallen behind 3 minutes in the first 17 hours, the *Lee* having run to Natchez in 17 hours and 11 minutes; the *Natchez* in 17 hours and 14 minutes. According to these figures the *Lee* passed the Natchez wharf at a quarter past 10 in the morning on July 1, and the *Natchez* at 21 minutes after 10.

At Natchez the famous horns of the *Princess* were delivered to the leader by a flatboat lying in the stream. The *Princess* had made the record time from New Orleans to Natchez, and her horns had been placed over the wharf with the inscription, "*Princess'* time to Natchez, 17 hours, 30 minutes. Beat this and take the horns." They had been unclaimed for 15 years, but when it was seen that the *Lee* would beat the time, they were sent out in the stream for her to pick up. The *Lee's* time was 19 minutes better than that of the *Princess*.

Vicksburg was the next goal to race for, and the *Lee* beat the *Natchez* there, showing a gain in running time of 18 minutes over her rival. It was the end of the first day, the *Lee* passing Vicksburg wharf at 18 minutes to 6—according to the Kouns record—on the afternoon of July 1, and the *Natchez* passing at 3 minutes after 6. The *Lee* ran up along the upper wharf boat and discharged a few passengers and started off, picking up two coal floats in the river. Coal heavers swarmed over them and they were cast off minus the coal in a few minutes. In doing all this the *Lee* lost only 8 minutes. The *Natchez* tried the same feat, but got one of the barges across her bow, and she was delayed several minutes. The end of the first full day of the race closed with the race still in the balance, but with the *Lee* 18 minutes in the lead.

The *Lee* was in Memphis at 4 minutes after 11 the next night—the night of July 2. In the 35 hours since she had left Vicksburg she had begun to show that she was almost a sure winner. She was out of Memphis a minute after she arrived. The *Natchez* was 10 miles behind. The *Natchez* cleared for the north at 13 minutes after 12 o'clock, and the dash was on for Cairo.

The *Lee* passed the mouth of the Ohio, 3 miles from Cairo, at 4 minutes after 6, the afternoon of July 3, and took on coal and pilots running at almost full speed. The *Natchez* passed at quarter past 7. The pilots picked up by the *Lee* to take her to St. Louis—Connor not being familiar enough with the river above the mouth of the Ohio—were "Cap" Jesse T. Jamison and Enoch King. Jamison, who is now 75 years of age, lives in St. Louis. Recently, reviewing the race after he had taken Connor's place at the wheel, he said: "We'd just left Cairo and daylight behind when a fog settled down.

STOP FOR A FOG? NOT MUCH!

"You bet, we'd a' run that fog if we'd a' known Uncle Charon was waitin' for us midway," said Jamison, grimly. "When it began dropping down on us as we shot by Devils Island, Enoch—my pard at the wheelhouse, Enoch King—turned to me and said:

"'We'll cut right thru it, Jesse?'

"'Of course,' I said.

"The news that we got the next morning that the *Natchez* had tied up dazed us. She had been holding on like a bulldog to a book agent clear up to Cairo, and when Enoch and I were wafted out into midstream on a coal scow to board the *Lee* and hunt easy water for her into St. Louis we could look down the bend and see the *Natchez's* smoke filling the air like the battle of Waterloo. The river then between Cairo and St. Louis comprised about 200 miles of the toughest piloting you ever saw around these parts anywhere. There wasn't a lighthouse from end to end of the run, and there were snags, bars, and overhanging trees enough to discourage a Pilgrim ghost. Jim Pell and Wes. Connors, who had steered all the way out of New Orleans, were as tickled as schoolboys to see us. You see, they had only studied the river to Louisville, and we were sent down by rail to take the racer into the St. Louis terminal.

"The fog shook hands with us at Devils Island. We supposed, as a matter of course, the *Natchez* would tackle it, and we never thought of doing anything else. At that stage of the game a blowup wouldn't have been worse than to have trailed in behind.

"The uncertainty of that night turned my hair gray. We hadn't a ghost of an idea where the other boat was and dreaded every moment that we'd hear her ploughing through the gloom ahead of us. About 15 miles below St. Louis we sighted a fleet of steamers and tugs that had come down to meet us. There was the *Harry Johnson*, the *Eagles*, and every crack boat that happened to be at the St. Louis wharf at the time. Before we got to them they turned around and headed back up the river with every ounce of steam they could carry. We beat 'em to town—every one of 'em—so far we lost sight of 'em."

The *Lee* was tied at the dock at St. Louis at 34 minutes past 11 on July 4—and it was a Fourth that St. Louis will always remember. She had finished the 1,200-mile course in 3 days 18 hours and 14 minutes, according to Mark Twain's official figures. The *Natchez* did not come into sight down the river until late in the afternoon, after most of the celebration was over. Her 6-hour tieup in the fog had settled her. Her time was 4 days and 47 minutes. Her owner, Capt. Leathers, at the celebration banquet that night, showed that he died hard by announcing that, deducting the 6 hours she had tied up in the fog and 30 minutes which, he asserted, had been lost in repairing a pump below Helena, the *Natchez* "beat" the *Lee* some 20 minutes. The men who had won their money on the *Lee* only sang—

Shoo, fly; shoo, fly; don't bodder me;
I done bet mah money on de *Robert E. Lee.*

A couplet that, both as a song and a jingle, became international.

Replying to Leathers's previous statement that he would not have a skiff built at New Albany, some one propounded the question, "If a 4-year-old water-soaked boat which has been laid up on the ways twice, one time falling off her blocks and twisting herself badly, can easily beat a new boat like the *Natchez* on a race of 1,200 miles, what might be expected of a new New Albany boat, like the *Lee*, in a similar race?"

The *Natchez* was completely vanquished, and the *Lee* was the queen of the river. But she passed, as do all things. She made her last trip up to the very yards where she was built, and here, along in the later seventies, she was wrecked by her former builders, and most of her went into the second *Robert E. Lee.*

The *Lee* had boilers that were very light and cylinders 40 inches in diameter. Her engine had a 10-foot stroke, and her driving wheels measured 38 feet in diameter. The *Natchez* had even a greater wheel, it being 43 feet in diameter, but her cylinders were only 34 inches. She also had a 10-foot stroke. The *Natchez* was 3 feet longer and 3 feet narrower than the *Lee.* "Thirty-four could not cope with forty,"—this is the story in a nutshell—the difference in size of her cylinder. Other boats have for short distances beaten the average time of the *Lee*, but to this day the steamer holds the record for the full trip between St. Louis and New Orleans, and the story of this race is the greatest in American river history.

—

THIRTY-EIGHTH ANNIVERSARY OF GREATEST RIVER RACE—WHEN "ROBERT E. LEE" AND "NATCHEZ" FOUGHT FOR THE SUPREMACY OF THE MISSISSIPPI RIVER—A PASSENGER ON THE WINNER RECALLS THE INCIDENTS OF THE FAMOUS EVENTS 38 YEARS AGO.

[Reprinted from Waterways Journal, July 4, 1908.]

Capt. Andrew G. Swain, himself a famous river man, was a passenger on the *Robert E. Lee* when she won the famous race to St. Louis against the *Natchez*, says the New Orleans Picayune. To-day is the thirty-eighth anniversary of the great river event, still exploited in song and story. Capt. Swain is now retired, living in peace at Rosedale, in Iberville Parish, but thrills whenever the experience of 1870 is recalled. A few years ago he consented to tell the tale for the Picayune for the benefit of the new generation which lives in hope of the revival of the glorious days on the Mississippi. The description of the race and many little-known matters in connection with it is given in the gallant captain's own words, as follows:

"The steamer *Robert E. Lee*, owned and commanded by Capt. John W. Cannon, was built at New Albany, Ind., for the New Orleans and Vicksburg trade, leaving New Orleans regularly every Tuesday for Vicksburg. The steamer *Natchez*, built at Cincinnati in 1869, was owned and commanded by Capt. Thomas Leathers. She also was a regular Vicksburg boat, leaving New Orleans every Saturday.

"In the spring of 1870, the cotton season being nearly over, the *Lee* was withdrawn from the trade and a smaller boat took her place to accommodate her patrons during the summer months, the *Lee* entering the Louisville trade. The *Natchez* was also withdrawn from the trade, placing a small boat in her place to represent her during the dull months, the *Natchez* entering the St. Louis trade. Each boat was advertised and scheduled to leave New Orleans four or five trips ahead—*Natchez* for St. Louis, *Lee* for Louisville. The 'ad' was in all the leading papers in New Orleans, Natchez, Vicksburg, Memphis, St. Louis, Louisville, and Cincinnati, thus giving passengers opportunity to engage their passage and staterooms a trip or more ahead.

"In those days boats were crowded with passengers going North and East to spend the summer. The boats were like palaces—the fare 'fitten for a king.' The trip was thoroughly enjoyed by everyone who traveled on these palatial steamers.

"According to their advertised scheduled date, each boat was due to leave New Orleans on the same day, June 30, 1870, the *Natchez* for St. Louis, the *Lee* for Louisville. They arrived on time, discharged their freights, and were getting ready for another departure. The speed of the two boats was the talk of steamboat men from one end of the river to the other. The most important question was, if there was to be a race; if the boats were going to prepare for a race—a race to Natchez, St. Louis, or to Louisville? The friends of both boats were anxious to know if there was to be a sure-enough race for speed. Capt. Cannon, of the *Lee*, was not in favor of giving up his business trip to Louisville to make a race for glory with the steamer *Natchez.* He said, 'I know I can beat her, but it will cost me $7,000 or $8,000 to give up my trip and prepare for a race to St. Louis.' His friends prevailed on him to make the race, so he abandoned the Louisville trip and went to work arranging and planning every detail necessary to make the race to St. Louis. Capt. Leathers, of the *Natchez*, was eager for the race, so confident was he his boat was the fleetest of the two. He told his friends to string themselves out along the river front above the city and they would see the *Natchez* pass the *Lee* before she got out of sight of the city.

"Thousands and thousands of people did line the river front to see the racers pass by. Several boats crowded with people went up the river above Carrollton to see the boats pass. Such enthusiasm and interest was never manifested in any boat race before, not only in New Orleans, but all over the country. Especially at the shipyards where the two boats were built the enthusiasm was at fever heat and the betting ran high on their favorite boat.

"Every preparation had been made by the captain of each boat. The dunnage plank was taken out of the hold of the boats. This was to take the stiffness out of the hull, make it free and easy, limber, and flexible. The splash door and bulkhead, aft of the water wheels, were taken down on each boat. This was to give a free clearance for the water as the wheels revolved. The small wheelhouse derricks were also taken down to prevent catching wind. Both boats were groomed for the race. Coal, pine wood, and rosin were put aboard; arrangements were made at different places along the route to have tugboats run alongside with coal flats, the coal taken off while running under 'half head,' thus losing little time taking the necessary fuel aboard.

"Everything in readiness; time was drawing near. Thousands of people on the levee anxiously waiting to see the two boats back out. Suddenly and like a flash the mate of the *Lee* was heard to say, 'Launch stage' (there was no steam-hoisting stage rigging then), and with one lurch the roustabouts had the stage across deck. The lines were cast off, the pilot of the *Lee* rang the backing bells, and the crowd on the levee waved handkerchiefs, hats, and coats, and cheered. Scarcely had the *Lee* backed out when the *Natchez* rang her bells and was backing out amid the cheers from her friends. The *Lee* straightened up the river and got under way at 5 p. m. Thursday, June 30, 1870. The *Natchez* got under way three minutes behind. She blew her whistle several short blasts, which was taken to mean, 'Look out, *Bob Lee*, I am going to pass you sure.' 'Come on,' answered the pilot of the *Lee* with short blasts of the whistle. It was a beautiful start. Both boats passed St. Marys Market, from which point all boats take their time, the *Lee* firing her gun off the given point at precisely 5.03, the *Natchez* firing hers at precisely 5.03. Smoke was belching from the smokestacks of the *Robert E. Lee* and the *Natchez*, and they were running like scared wolves. Such a grand sight was never witnessed before on the Mississippi River.

"After the boats passed Carrollton it was very evident that the *Lee* was the faster boat. Slowly but surely the gap was widened. The *Lee* had 75 passengers on board, and, strange as it may seem, there was no excitement among them. They walked about the cabin, out on the guards, chatted with each other, discussing the speed of the two boats, and were as unconcerned, apparently, as though they were not on a boat that was making a 1,200 mile race with the great steamboat *Natchez.* After supper the lady passengers were enjoying music in the ladies' cabin, while some of the other passengers amused themselves playing euchre, poker, and other games.

"At 12 o'clock at night the *Lee* turned Conrads Point, which is the foot of a long reach below Baton Rouge. When the *Lee* was opposite Scotts Bluff, 4 miles above Baton Rouge, the *Natchez* was turning Conrads Point, a distance of 9 miles, a pretty good gain in a 17-hour run. Several passengers went up on the upper deck to see the lights and smoke of the *Natchez* at the foot of the reach. Some remarked: 'The *Natchez* ain't in it. She will never see us until she reaches St. Louis.' But lo, at 1 o'clock a. m., July 1, in Prophets Island chute, 144 miles above New Orleans, bad news is reported from the engine room. 'What is it? What can be the trouble?' came from the now ex-

cited passengers, who had not yet retired. Upon investigation it proved to be one of the rivets of the mud drum blew out, which necessitated cooling down and run along under half head of steam while an iron band was put on the drum to stop the leak. The *Lee's* speed was considerably reduced while repairs were being made, which consumed about three hours. The passengers expressed their sympathy with Capt. Cannon for having an accident to the machinery after making such a fine run. He answered in a self-confident manner: 'It's all right. We will have it repaired after a while. If we can only get through before the *Natchez* catches us, is all I care for.'

"While these repairs were being made the *Natchez* was crawling up, getting nearer and nearer, and for a while it looked like she would catch up and pass by. But the *Lee's* engineers, Perkins, Barry, and their assistants, were hard at work, knowing how much depended on them. At 4 a. m. the repairs were finished. The engineer rang his bell over the fire doors to fire up. Soon steam commenced to go up and everything was working O. K. again. The passengers were tickled and delighted that the *Natchez* did not go by while repairs were being made and running under half head of steam. She did gain about what she had lost, coming about as near to the *Lee* as when they left New Orleans.

"When the *Lee* had all the steam necessary, after repairs, she commenced leaving the *Natchez* and was running like a deer. Capt. Cannon gave his chief engineer, Perkins, an order, or rather a request, which should be known by every steamboat man on the Ohio and Mississippi Rivers. He said: 'Perkins, don't crowd or shove this boat any more. We are not running for time. We can beat that boat easy; you know that. So let her go along moderately. Just keep ahead of her; that is all I want to do.'

"Perkins replied: 'All right, Capt. Cannon, I will keep ahead of her.'

"This accounts for the *Lee* not beating the *Natchez* more than she did to Natchez and all other points. These are facts not generally known except to those who are now living and made the trip on the *Lee* in that memorable race.

"The accident to the machinery of the *Lee* at Profit Island caused the loss of thousands of dollars, as there were many bets made on the time to Natchez. Bets were made that the *Princess's* time, 17 hours and 30 minutes, would not be beaten. Some bet it would be beaten 30 minutes. Bets were made that the *Lee* would beat the *Natchez* to Natchez 15 minutes; some 30 minutes; some 45 minutes. As it was the *Lee* beat the *Natchez* only 8 minutes. There were also thousands of dollars bet that the *Natchez* would beat the *Lee* to Natchez. There was no money bet between the two owners of the boats. The race was to test the speed of the two rival boats. The *Lee* showed her superiority, and would have easily reached Natchez half an hour ahead of her rival had it not been for the unfortunate accident to the *Lee* at Profit Island, causing her to run under half head 3 hours, and not being pushed to her limit after repairs were made. The *Lee* arrived at Natchez on July 1, at 10.15 a. m. Time, 17 hours and 11 minutes from New Orleans. The famous horns of the steamer *Princess* had been on the wharfboat for 15 years, with the inscription: '*Princess's*' time from New Orleans to Natchez, 17 hours and 30 minutes. Beat this and take the horns.' Capt. Holmes, an old-time captain in the New Orleans and Vicksburg trade, sent the horns out on a flat to Capt. Cannon, who received them modestly amid the booming of cannon, blowing of whistles, and cheering of thousands of people gathered on the bluff to witness the boats pass on.

"After very little delay the *Lee* proceeded up the river with two coal flats in tow. Coal being transferred to the boat in short order they were turned adrift. As the *Lee* turned the point above town the *Natchez* reached the wharfboat, 8 minutes behind the *Lee's* time. She also received an ovation from the thousands of people waiting to greet her. She lost no time there and proceeded up the river in the wake of her rival.

"The *Lee* passed Vicksburg at 4.42 p. m., and the *Natchez* was not in sight then.

"One of the most interesting incidents that occurred on the trip was the meeting of the steamer *Frank Pargoud*, commanded by Capt. Alex. McVey, in the bends above Vicksburg. Capt. Cannon had arranged to have 125 cords of pine knots on the *Pargoud*. The boats met at 11 p. m. When securely lashed alongside of each other with a 6-inch hawser both proceeded up the river under half head of steam while the wood was being transferred. The mates made the roustabouts go in a run, transferring the knots to the *Lee*. Capt. McVey had invited several planters, shipping clerks, and other friends living on the river to go down on his boat to meet the *Lee*. As soon as the boats were lashed together the guests of Capt. McVey went on board the *Lee*. A number of them had a bottle of champagne, with which they sprinkled the decks, saying nothing is too good to wash the decks of the steamer *Bob Lee*. After the pine knots were taken aboard the lines were cast off, and the *Lee* was once again off on her race.

"July 2 the *Lee* reached Memphis at 11.04 p. m. She was greeted with the booming of cannon, whistles from steamboats, tugs, and factories. Great bonfires, rockets, and fireworks were displayed at the steamboat landing. The excitement and enthusiasm ran high. The *Lee* did not tarry but a minute or two, and left amidst the cheering and thundering of cannon and tooting of whistles. It reminded one of the noise made in New Orleans on New Year eve. The excitement along the whole route on the river was intense. People stood on the banks in groups and crowds at different places to see the great racers go by. Old ex-Confederates living several miles from the river on the Arkansas side came in to the river bank and camped, waiting to see the steamboat, named for their beloved commander, Robert E. Lee. They gave the 'rebel yell' when their favorite passed up in the lead.

"Several miles below Cairo we overhauled the local packet *Idlewild*, landed alongside and transferred several passengers and their baggage booked for Louisville. In daytime along the whole route steamboats stopped and floated with the current while they dipped their flags in honor of the boat bearing the name of *Robert E. Lee*, which was gracefully acknowledged by the pilot with several short blasts of the whistle. A number of boats met at nighttime, made a display of fireworks, sending up rockets, blowing whistles, etc., in honor of the fleetest boat on the western waters. There was no lull in the enthusiasm all hours of the day or night.

"The *Lee* reached Cairo at 6.03 o'clock in the evening, three days and one hour out from New Orleans, the quickest time on record. The *Lee* was drawing 6½ feet of water, and Capt. Cannon, knowing the shoal and snaggy condition of the river between Cairo and St. Louis, knew how necessary it was to keep his boat in the channel, some of the sand bars having but 7½ feet of water. He had taken the precaution to engage the services of two well-known pilots, Jesse Jamison and Enoch King, to 'knock the block out' of the channel to St. Louis, as it was a matter of piloting and not speed the balance of the trip, owing to the low stage of water. These two pilots were on two coal flats the *Lee* picked up at Cairo. As soon as they were landed alongside they at once stepped aboard and reported to Capt. Cannon for duty. He told them to go up and take the wheel, relieving the Louisville pilots, Wes. Connor and Jim Pell, who had acquitted themselves so well in the run from New Orleans to Cairo. There was little time lost taking coal from the flats and they were turned adrift, and the *Lee* was again off on her run.

"A few miles above Cairo, running at a lively gait, the *Lee* turned her stern from shoal water on a sand bar and ran off like a deer. The pilot stopped both engines and set her to backing and straightened the boat up on her course under half head of steam. There were a few prominent steamboat owners and captains on board who weakened and were ready to give up the race when they saw the boat stopping, ringing bells, handling the boat, and apparently losing time in shoal water. But cool and calm, as he had been at all times on the trip, Capt. Cannon said to them: 'Don't be disheartened and give up. No boat can run "full tilt" on shoal water. We are a long ways ahead of the *Natchez*. She will never catch us. I have just instructed these new pilots we took aboard at Cairo to let her run along under half steam. The race for speed with the *Natchez* is won. It is with the pilots from now on. Son, don't worry any more.'

"During the night signs of fog showed up and finally thickened so it was necessary to run under slow bells, and run along very carefully. Captain, mates, and pilots were on the lookout. At Devils Island it began to clear up a little. After several hours' running in fog without an accident a little wind sprang up and blew it off, the boat then being above Devils Island.

"Soon after breakfast the boat, running along at a moderate rate, approached the beautiful home known as Kennett's mansion. When opposite the front of the house, waving of handkerchiefs, flags, and banners and cheers came from the ladies and gentlemen standing on the balcony, in the windows, and on the housetop. A moment later a large Confederate flag was unfurled from the balcony, reaching nearly to the ground. It was an agreeable surprise, and enjoyed by everyone on board of the *Lee*. Capt. Cannon hurried to give the mate orders to load the little cannon that was on the lower deck by the bitts. 'Hurry up,' he said, 'before we get by, and give them a salute.' Bang! belched the little gun in acknowledgment of displaying

the Confederate flag and to those who participated and aided in doing honor to the steamer *Robert E. Lee.*

"About 10 or 15 miles below St. Louis we met a fleet of steamers and tugs crowded with people. They came down to meet and to do honor to the victorious steamer, *Robert E. Lee.* They turned around and started up the river with all the steam they could carry, the *Lee* leaving them far in the rear, while the roustabouts sang:

"Shoo fly, don't bodder me;
You can't keep up wid the *Bob Lee.*

"The *Lee* arrived at St. Louis at 11.33 o'clock on the morning of July 4, finishing a 1,200-mile run in 3 days, 18 hours, and 13 minutes, the best time on record.

"The wharf boat, housetops, and the whole river front were crowded with people to welcome the great steamboat. Such cheers and other demonstrations and enthusiasm was never before witnessed. Wild with excitement and anxious were the thousands of people to go on board and see the cabin. Particularly were they eager to get a glimpse of Capt. Cannon, whom they had heard so much about. The police had to be called in to keep the swarm of people back for fear they might cause the upper deck and skylight to give way. Capt. Cannon was the center of attraction and was indeed the hero of the day. He was congratulated by his many friends for the successful run his boat had made. The *Natchez* arrived late in the evening, six hours after the *Lee,* and tied up at the wharf. Most of the big celebration was over, but Capt. Leathers was accorded a royal welcome from his friends and the thousands of people who remained at the river to see the *Natchez* come in. Capt. Leathers tied his boat up in the fog and lost four or five hours. This was the cause of his being so far behind at the close of the race.

"A banquet was given by captains and officers of the boats in the evening at the rooms of the board of trade. Miss Mary Lee, daughter of Gen. Robert E. Lee, was visiting friends in the city. She and other lady friends were invited to attend the banquet. When Capt. Cannon met Miss Lee she said, 'Captain, I congratulate you for having such a beautiful steamer and arriving safely after such a long run.' Capt. Cannon thanked her for the compliment and invited her and her friends to visit her father's namesake. She, in her modest and gentle manner, accepted.

"Later Miss Lee and her friends went to the river and boarded the boat. Capt. Cannon took great pride in showing his guests all over the craft. Miss Lee was perfectly charmed with the steamer named for her father. She said:

"'Captain, my father must certainly see this beautiful boat. It is a perfect palace.'

"He replied, 'There is nothing would give me more pleasure than to meet your father. When you go back home, tell your father to come down here in the fall and make a trip with me up the Mississippi on his namesake.'

"'I certainly will, and will insist on it. I am sure he will be delighted to do so.'

"After partaking of a beautifully served luncheon the guests returned to their homes highly delighted with their visit on board of the *Robert E. Lee.*

"July 5, the *Lee* left St. Louis for Mound City, a few miles above Cairo, where arrangements had been made to haul her out on the ways to be overhauled and repaired, to be ready to reenter her trade at the opening of the cotton season in the fall.

RACE FOR TIME TO NATCHEZ.

"It is not generally known that these two boats made another trial of speed to Natchez, Miss., in the following fall. Capt. Leathers had made changes in the furnaces of his steamer which greatly improved her capacity for making steam, and he started for Natchez Sunday, October 16, 1870, to beat the *R. E. Lee's* time to Natchez, arriving there in 16 hours, 51 minutes, and 30 seconds, beating the *Lee's* time 21 minutes. The citizens of Natchez gave Capt. Leathers an enthusiastic reception, bands playing, fireworks, etc.

"Capt Cannon learned the news by wire, and when the two boats met at Bayou Sara, Capt. Cannon took the famous horns over to the steamer *Natchez,* lying a few feet above, and presented them to Capt. Leathers, saying, 'Tom, take good care of these horns. I want them next week.'

"Capt. Leathers replied, 'All right, John. You'll never beat 16 hours, 51 minutes.'

"The next Tuesday the *Lee* left to make the run, but was prevented by storm, losing 15 or 20 minutes, reaching Natchez in 16 hours, 59 minutes. The 'Old War Horse' not being satisfied to have the trophy on any other boat than the *Robert E. Lee,* he started the *Lee* out Tuesday, October 29, 1870, to regain the treasured horns. Notwithstanding meeting a rise and the river full of drift above the mouth of the Red River, the *Lee* arrived at Natchez in 16 hours and 36 minutes, with her water wheels badly broken on the running drift, beating the fast *Natchez* 24 minutes, which time stands to-day the best on record.

"When the *Natchez* met the *Lee,* Capt. Leathers sent the horns back to Capt. Cannon. Some time in the seventies the *Lee* made her last trip up the river to New Albany, where she was built, and there wrecked by her former builders. The machinery was placed on a new boat being built for Capt. Cannon, which was also named *Robert E. Lee.*"

Memorial Address on the Life and Services of Hon. Seaborn A. Roddenbery.

MEMORIAL ADDRESS
OF
HON. CHARLES L. BARTLETT,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 8, 1914,

On House resolution 407, as follows:

"*Resolved,* That the business of the House be now suspended that opportunity may be given for tribute to the memory of Hon. SEABORN ANDERSON RODDENBERY, late a Member of this House from the State of Georgia.

"*Resolved,* That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of the exercises of this day, shall stand adjourned.

"*Resolved,* That the Clerk communicate these resolutions to the Senate.

"*Resolved,* That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. BARTLETT. Mr. Speaker, I can add but little to the tribute that has been paid here to-day by my fellow Members to the memory of my departed friend and colleague, Judge RODDENBERY. It would be impossible in the time allotted for these eulogies to present in more than briefest outline the principles which guided and controlled the conduct of our late comrade in both his public and private life. Mr. Speaker, the excellencies of mind and heart which characterized him in his more intimate personal relations were truly reflected in his larger relation to the body politic as a public man and servant of the people. Loyalty, not only to friend and fellowman, but to ideal and conviction, was the great directing force of his energies in whatever sphere of action they were employed. Too often we hear the complaint that the man of lofty ideals, however competent he may be to resist evil in the restricted sphere of his private dealings and relations, is unable to cope with the far more complex and potential forces which beset the man in public life and too often tempt him to sacrifice honest conviction to political expediency. On every hand we hear that good men are prone to be weak in the open advocacy of that which they truly believe to be right, and that the bold and courageous efforts of men are most frequently directed to the service of quite selfish ends. Mr. Speaker, as a complete refutation of the cynical notion, so often expressed nowadays, that the man in public life must run counter to his own truest thought and conviction, let me point to the life of our departed friend, replete as it was with good deeds performed for the public weal under conditions requiring the exercise of moral courage of the very highest order. Here was a man who never compromised the truth as he saw and believed it, and never did he enlist his splendid talents in a cause that did not command his truest thought and sympathies.

From early manhood his naturally combative mind had been trained in that severest of all forensic schools, the courtroom, and when he reached this Hall, though young in years, he was an intellectual foeman worthy the most seasoned debater's steel. To him political virtue consisted in something more than mere subscription to the tenets of his party's faith; to him it meant action, ceaseless and dynamic action, to bring to his fellow men the actual and present realization of the blessings of good government; to him it meant the putting on of the full armor of righteousness and uncomprising warfare on the cohorts of special favor and privilege. Public office and station represented something more to him than the mere realization of personal ambition; it represented to him opportunity to serve his fellow men, and I need not say how well that opportunity was improved.

Judge RODDENBERY was truly a man free from envy, hatred, or malice. In both private life and public station he followed the injunction of the great Apostle that—

Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are

lovely, whatsoever things are of good report, if there be any virtue and there be any praise, think on these things.

So did he travel through life's common way in cheerful godliness.

Cut off at a comparatively early age, our friend has been called from this Hall, almost upon the threshold of his duties here, but we are comforted by the thought that in the everlasting halls above his freed spirit awaits the final convocation of the just.

Hardwick Amendment to Relieve Cotton Situation.

EXTENSION OF REMARKS

OF

HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 21, 1914,

On the bill (S. 6398) to amend section 1 of an act approved May 30, 1908, entitled "An act to amend the national banking laws."

Mr. MANN. Mr. Speaker, there have been four amendments offered by the gentleman from Georgia [Mr. BARTLETT] to the Hardwick amendment, which Bartlett amendments have been agreed to, thus modifying the Hardwick amendment.

Under the leave to print which has been granted, I desire to insert in the RECORD the Hardwick amendment as thus amended. One can not tell by reading the RECORD just what the Bartlett amendments provide, as they refer to lines and pages of the Hardwick amendment as offered and not as appears in the CONGRESSIONAL RECORD.

As the record vote on the Hardwick amendment will be on that amendment as amended, I insert in the RECORD the Hardwick amendment as amended upon which the record vote will be had, which is as follows:

SEC. 3. That the Secretary of the Treasury shall deposit in national banking associations and in State banks situated in States producing cotton or tobacco, or both, the sum of $250,000,000, or so much thereof as may be necessary to carry out the purposes of this act. The said Secretary shall make such deposits under the terms of this act and under such rules and regulations as may be prescribed by him to carry out this act. The deposits herein directed to be made shall be apportioned among the several States in accordance with the number of bales of cotton or pounds of tobacco produced therein during the year 1913, as ascertained by the Department of Agriculture. The Secretary of the Treasury, in lieu of the securities he is now authorized or required by law to exact of the banks in which the funds of the United States are deposited, is authorized and hereby directed to accept as security for the deposits directed to be made in this act cotton warehouse and tobacco warehouse receipts, where the cotton or tobacco thereby represented has been fully insured, at a valuation that represents the fair market value of the cotton or tobacco covered by such receipts. The deposits herein directed to be made shall be made only on the condition that the banks accepting such deposits will loan the same, under reasonable terms and conditions, to the producers of cotton or tobacco, or the owners of lands upon which the same was produced during the year 1914, and the said Secretary of the Treasury is hereby authorized to make all necessary rules and regulations concerning the terms and conditions under which these deposits shall be loaned by the banks that accept the same.

SEC. 4. That the Secretary of the Treasury shall, in his discretion, either immediately cause to be prepared United States notes to the extent of $250,000,000 to be used for the purpose of making the deposits in compliance with this act, which said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe, and shall be payable in gold coin of the United States or its equivalent on January 1, 1916.

SEC. 5. That the Secretary of the Treasury shall not require the repayment of any deposit made under the provisions of this act prior to December 31, 1915.

Cotton.

EXTENSION OF REMARKS

OF

HON. DUDLEY M. HUGHES,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 21, 1914.

Mr. HUGHES of Georgia. Mr. Speaker, I never occupy the time of the House unless I believe my duty compels me so to do. On the great question presented by the cotton situation silence on my part would be an indifference, if not an injustice, to a great cause of supreme importance to my district, State, and the Union, and I therefore rise in behalf of a cause I know is just and to plead for a remedy which I believe to be right.

Cotton is essentially the money crop of the Union. Never before has this staple entered the field of commerce and found no market. But such was the case early in September of this year, just as the crop should have commenced to move. It is a crop of prime necessity to all the civilized peoples of the world, for it clothes about 70 per cent of the world's inhabitants. Up to this sad hour it has been the equivalent of gold, for gold would be exchanged for it wherever commerce existed, wherever civilization ruled. It is the great national crop of the Republic, and in its production the United States has no competitor. Its production belongs to this Union, a gift divine, and it is indigenous to only 15 States of this country, known as the Southern States. The cereal crops, in which the United States leads, have competition, but cotton has none worth the while beyond the borders of this Union.

Hence, cotton is nature's especial gift to this Union, and as such occupies a distinct place in national products. It can not be placed in the same category with any other product of this Nation, for it stands separate and alone.

Cotton and its by-products are worth annually to this Government $1,000,000,000 in gold. Two-thirds of this great crop is exported, and keeps intact the gold reserve of the United States. This sum is paid for the raw material, and when manufactured into the finished products its value is several billions.

The cotton lands of the South which produce this staple are worth more to the United States than all the gold, silver, iron, and copper lands combined, for as time passes, with scientific care of the soil, these lands increase in productive capacity. The rich veins of gold, silver, and other minerals can be exhausted, regardless of all efforts of scientists, but the cotton lands of this Union never. They can be made to yield more to the acre as time passes and become richer with the ages. It is the one great agricultural gift with which God has blessed our country.

While in this natural monopoly we have a priceless heritage, it is a crop which is costly to produce. It requires 12 months of incessant labor in its production. It can neither be thinned nor put to a stand by machinery. This must be done by a hoe in hand, and when the harvest is ready every lock must be handled by the finger tips. Hence the cost of production is great, owing to hand culture and gathering. Human ingenuity has snatched the very lightning from the clouds and made it a utility for man with wonderous power, but there has yet arisen no Edison to supplant man's fingers in plucking from the clinging boll this fleecy staple, making it ready for the gin, the press, and to go into the markets of the nations to keep the balance of trade on our side.

Until the outbreak of the European war "its fiber was current in every bank, and when loosing its fleece it floated as a sunny banner that glorified the fields of the humblest farmer and marshaled under a flag that compelled the allegiance of the world." But, alas, alas, the producer of cotton finds himself within the walls of an air-tight vault, with this snowy treasure on all sides, and the door securely locked. This Government, and this Government alone, has the key that can release, relieve, and save him. Will you hearken to his cry for help, or will you ruthlessly turn a deaf ear, and leave the South, your neighbor, one of you, to destruction and ruin, a catastrophe worse than all the earthquakes, fires, and floods ever known in this country?

This great gold crop has been afflicted more seriously and directly by the terrible conflict beyond the waters than all the other crops of the Nation combined. All food products enjoy a stimulated, increased demand and market. The purchase of clothes can be temporarily deferred until the supply in the closets and stocks is exhausted, but the purchase of food for the millions in the contending armies can not be put off for a day, and the United States, the international storehouse, must and will supply any deficit in the crops of other nations and meet the pressing demands of Germany and the allies.

The time will come, whether within three months or three years, when the demand for cotton will again be great, but at present there is no demand. The European hands that were turning the spindles in peaceful commerce are now clutching the rifle in deadly conflict. The workers that wove the cloth to clothe humanity are now gone, not to create, but to destroy. The hum of the mills in their songs of industry in now stilled, and in its place is the cry of battle, the screams of those who, tortured with pain, have fallen. Commerce is paralyzed. At present there is no demand for cotton.

The European war, like lighting from a cloudless sky, a thunderbolt from the blue heavens, broke over the world, and absolutely closed at once temporarily the then prevailing foreign demand for two-thirds of the cotton of the United States. Our mills can consume 6,000,000 bales and they have a supply of

15,000,000 from which they may purchase, presumably at any price they might offer. The South was as surprised and taken as unaware of conditions which we are now facing as was the world over the outbreak of the most disastrous war in history. The South has matured a magnificent crop of cotton, after nearly 12 months of incessant labor, at a heavy cost to the grower. Cotton is necessarily a credit crop. The grower is indebted to the country merchants and State banks for loans advanced, and without a moment's warning his cotton was found without a market. Bankruptcy and ruin stare us in the face and demoralization everywhere over the South—60 days ago happy, contented, and prosperous.

The situation is growing more acute with each passing day, and chaos, ruin, and want are threatening to lay hold upon us. Should the cotton crop be placed on the market as it is gathered the price would scarcely pay for the picking, ginning, and marketing. Rather than this, it would pay the growers to leave 9,000,000 bales on the stalk to fall and decay on mother earth, for then would the 6,000,000 bales consumed in this country bring more net to the producer than the sacrifice of the 15,000,000 bales.

This bill is the relief measure urged by the representatives of the cotton growers after careful consideration. It is not a bill that would be suggested and considered in time of peace. It is an emergency war measure. We earnestly ask you to consider it. It is for immediate relief to save one section of the Union, the salvation of which is of vital interest to every State—North, South, East, and West. All are concerned, all are interested. The "buy-a-bale" movement to retire a portion of the crop from the market at 10 cents has met approval in all parts of the Nation. It shows a praiseworthy interest and spirit, and several thousand bales are said to have been bought and withdrawn from the market, but the situation is such that producers of 15,000,000 bales need help to tide them over and save them from the distress of a glutted market.

The producers of cotton do not ask a donation, but they do ask this Government to loan them a sufficient amount of currency to meet an emergency so great that it threatens not only the South but the business of the whole Nation; and asking this loan, we give you the best security; we give you cotton, which is the equal of gold, and all must concede it will be exchanged for gold at the end of the European war. The demand for the 15,000,000 bales, while deferred, is sure.

The emergency has not been met by Government deposits in national banks, some of whom are hoarding the currency and keeping it out of circulation. The recent action of the Secretary of the Treasury should have brought some relief, but it did not meet the emergency. Recently a prominent resident of my district told me that in one of the most prosperous and enterprising cities in the district he recently saw a man of good credit go into one of the banks of the town and endeavor to secure a loan of $15 per bale on cotton, and was unable to obtain it. Another cotton producer wrote me to know if I could secure a loan of $1,500 on real estate with a value of $15,000. I cite these two instances merely to show how pressing is the need, how great the demand, for ready cash, emergency currency.

The Secretary of the Treasury states that he has the power to issue $1,000,000,000 of additional currency, if required. Yet in my own district, one of the greatest farming districts in this Union, men of good financial standing are unable to secure $1 in cash on $10 worth of security or $15 on the best security—a bale of cotton. A great deal more money than has yet appeared is needed to meet and check the coming ruin. While there appears to be an abundance of available money, no adequate system is in operation to meet the heavy demands of this terrible emergency through the agency of which the money can be had by the farmer.

Hence we urge the passage of this bill or some other measure which will save the producer of cotton and prevent 9,000,000 bales from falling into the hands of the speculators and combines, thereby working the ruin and poverty of the grower.

We ask you to loan us on good security, a transaction in which you run no risk. This Government has gone to the relief of different sections, suffering from earthquake, fire, and flood. This was commendable, and the aid given was supported by every Member from the Southern States, as I think the record will show. These appropriations were unstinted, and they were just, patriotic, and right.

We present to you a request for a loan, bearing interest, with the best collateral. Will you refuse and permit ruin to follow? Or will you accept our secured paper and save us? This is the question.

When the wealth of the Nation was threatened with panic, the aid of the Treasury has been repeatedly sent to the relief of the bankers that wealth might be saved and panic averted. And this was a wise policy. Now that the creators of all wealth—the farmers—are facing catastrophe, will the great Government of equal rights be less generous?

Cotton, in its intrinsic value to the world, is on a parity with gold. In saving cotton to the South you save gold to this country. One is of not less importance than the other.

I address this House with a heavy heart, burdened with a sorrow I can not express for the people I represent, who hold the result of their year of toil temporarily without a market, but only temporarily. Unless, however, the market or relief comes soon, it will be too late for the good of the growers, for they can not hold their crop indefinitely. They offer their labor, the sweat of their brow, the raw material, as security for a loan. Cotton, in peace or war, is not only the equal but the superior as a security of any two names of the highest financial rating, the two names that will be taken as a security under the new currency law.

We ask you to make this war loan in this emergency and take the security of the borrower. Declare any just and equitable terms, and the farmer will meet the requirements.

The States were joined together in solemn compact for mutual good. The South is a party to that compact. A great crisis surrounds her, and as a part of you she asks your aid. If you refuse, you allow a consuming fire to destroy your neighbor's house, thereby endangering your own; and you do this when you have the control of the water which can easily extinguish the flame.

Should you say nay, we must bear the hardship with all the fortitude and bravery of a courageous people, with that same nobility of spirit which characterized the South during the distressing years of the past. Though you stand and watch the structure that a great people has builded burn to ashes for the want of a friendly hand, that great section will rise again in all her majesty and strength, for her trial, though it be one of the most severe she has ever known, can be met and will be met, but it will require a decade for her to overcome that which you can avert in one hour.

If our Southland has to make the fight alone, there will be scars of conflict to mark the terrible struggle, the pinch of poverty will again be in her cheek, the sadness of disappointment at the failure of her sister States to measure up to their friendship will be in her eye, but in the end there will rest upon her brow the crown of victory from a contest that should not have been required.

Conservation—National Forests.

EXTENSION OF REMARKS

OF

HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 15, 1914.

Mr. RAKER. Mr. Speaker, the question of conservation has been a vital and an important matter pending before this Congress, as well as before the Sixty-second Congress. In 1910, and again in 1912, on the question of conservation, in a statement made by me on the floor of the House I used the following language:

> I am * * * in favor of conservation of our natural National and State resources, and a progressive upbuilding policy, honestly and economically enforced; that we control our natural resources and use them now—in the present—but still control them so the future use of them will be saved for the people of this Nation—keep them from the hands of the few.

I also stated in regard to keeping platform pledges and promises, as follows:

> I believe it is but proper and right for me at this time to say a few words upon the important question of the duty of those who seek to represent the people of this great Nation or any branch of it, as well as one of the sovereign States, to fully carry out their preelection promises and platform. The promises made by a man when seeking to obtain the suffrage of the people for any office within their gift should not be lightly made, and when made should not be broken. He should be at all times ready and willing to let the public know, as near as he can, his position upon public questions and matters of public concern. When thus made they should be considered as a moral and legal pledge between the public and himself, binding upon him, and to be truly and fully executed.
>
> I have heretofore acted upon and tried to fulfill such promises and shall continue to do so in the future. One who violates his preelection promises and platform is not entitled to the support of any constituency. He is a poor and faithless public servant. He has obtained a high position by fraud and deception if he takes any other course. His title to the office would be obtained and held by committing an offense, while not punishable by any known law yet enacted, though grossly guilty under the moral code. Though his conviction is not always had, it

most generally follows when he next appears before the people for their judgment. While not so certain of condemnation in the past, in the future it will be, because the people are taking a closer inventory of their public servants and are now more fully appreciating their rights and the means with which they can execute them.

There can be no moral or legal excuse for a want of fulfillment of preelection pledges.

I made promises to the people of the first (now second) congressional district two years ago. Those promises have been observed and executed by me to the fullest extent of my knowledge, power, and ability.

This platform has been carried out. The House has passed the Alaskan coal bill; the water-power bill; the coal, oil, and gas bill, and many other conservation measures.

The conservation of our National and State resources and our forest policy are now live questions before the American people.

The national forest policy has come to stay. Public opinion in California has always been in its favor because the majority of Californians understand that the prosperity of the State will suffer if mountainous timberlands are laid waste without regard for the public interest. The national forests help the settler. They promote the upbuilding of the community. They provide for the needs of the small man. They pay revenues to the State. They prevent the conversion of land most valuable for the production of timber and for water conservation into worthless and untaxable wilderness through forest fires and destructive lumbering. They give stability to the stock industry, the lumber industry, the various wood-using industries, and to irrigation development. They hold the door of opportunity open for the prospector. They restrict land and timber speculation, which tie up resources until the man who is ready to make use of them will come through with the price. They obtain for the State the benefit of national expenditures for the protection and administration of lands on which it is good policy to spend at the present time more money than they are yielding in revenue to the Government. They are not reservations, but public works, of which California gets the main benefit.

The principal beneficiaries of private timber ownership are the big timber companies, which to-day hold off the market a large part of the timber in the West, bought in at low prices. They are holding the timber in order to sell it later, when the public demand for timber has sufficiently enhanced the stumpage value, at a better profit. National forest timber, on the other hand, is for sale now, at a reasonable price, wherever anyone sees a chance to operate profitably. It is the national forests which give the poor man, the small dealer, any show. When the Department of Commerce investigated the ownership of private timberlands in California it found that, out of 7,386,000 acres of timber in the State, 1,939,000 acres, or more than one-fourth, was owned by three companies, and that companies or individuals owning 60,000,000 feet or over, each, had five and a half million acres, or nearly three-fourths of the acreage, and over five-sixths of the stand. In the national forests of California last year, out of 723 commercial timber sales made, only 4 were to purchasers of over $5,000 worth of timber, while 682 were to purchasers of less than $100 worth. In addition, there were 135 sales of timber to settlers at cost and 2,915 free-use permits. Miners on and near the Klamath National Forest petitioned the Government in 1911, when it was proposed to eliminate a part of the forest, against the elimination on the ground that the timber would be acquired and held by speculators and they would be unable to obtain the material needed to develop their mines as they now do from the Government. The national forests are the best protection that residents of California have against the evils of timberland speculation and monopoly.

In the national forests of the second congressional district of California the Forest Service has in the last three years made 1,261 timber sales, of which 1,249, or over 99 per cent, were for not over $5,000 worth of timber. The man who buys even $5,000 worth does not have to pay the full amount in advance, but puts it up in small installments as he goes along. Any man who wishes to engage in the lumber business can start on far less capital and with more favorable conditions on the national forests than he can outside. The forests make for diffused prosperity as against the results of concentrated ownership of great areas and great enterprises. They carry out the same fundamental purpose which the homestead act embodied—the American principle of equal opportunity for all.

If the national forests were abolished, the result would be not to promote the development of northern California, but to retard it. The same thing would happen with this timber which has happened with the timber already taken up by private speculators. It would speedily be gathered into great holdings and held for a rise in price. Does anyone suppose that if the great timber companies had been in possession of these forests during the last three years they would have made the 1,249 sales which the Forest Service made to purchasers of $5,000 worth of timber and less? Would they have sold timber, as the Forest Service did, in 1,720 separate transactions, to people who wanted less than $100 worth of timber apiece? Would they have allowed last year 97 settlers and farmers to buy whatever timber they needed for improving their farms at cost, and given away 4,500,000 feet of timber under free-use permits? Would they have put more money in circulation and provided more of a market for the farmers' products than the Government's timber sales have done, or less? With a few exceptions, what are the big owners of private timber doing to develop northern California?

When a small mill begins to operate in national forest timber the owner knows that there will be additional timber for him to cut after what he has bought has gone. Local industries and communities know that their future needs as well as their present will be provided for at a reasonable price. No one will be able to corner the market and take advantage of their necessities. Private ownership would mean a timber policy aiming not at provision for public needs but at the swelling of private profits.

The national forests do not pay direct taxes, but they pay into the county funds 25 cents on every dollar that the Government receives for timber that is cut. The people of the United States pay out of the taxes raised by the entire country all the cost of keeping the timber from burning up and all the cost of supervising the cutting and of attending to various kinds of national forest business. The Nation cares for these California forests free of cost to the people of California and then hands over to the people of California one-fourth of the gross receipts, although the forests are at present a source not of net income but of net expense. The national forests of the second congressional district of California contain 80,000,000,000 feet of timber. If it sells for not more than $1.50 per thousand, this timber will bring into the county funds $30,000,000. Further, it will also give the Secretary of Agriculture $12,000,000 more to spend in road building for the benefit of the public.

But this is not the whole story. If these forests were privately owned they would largely cease to be value-producing after they had once been cut over. The history of the great lumber regions of the Lake States would reproduce itself. There the sites of once-flourishing towns are now empty wastes, and lands formerly covered with the most valuable stands of timber that the American lumberman has ever laid low are now not worth paying taxes on at a valuation of a dollar per acre. National Forest timber is cut by methods which insure a new growth and future yields. Public ownership protects both the timber-using and the water-using public. Those who would persuade the people of California to seek the abolishment of the National Forests would persuade them to act against their own best interests. This the people of the State well know. The National Forests can not be abolished because the public does not want them abolished. To talk of doing away with them is folly. Their opponents are backing the wrong horse. The forests have come to stay because they ought to stay. The more the public finds out about them the more firmly established has the principle which they embody become.

In regard to the conservation bills that have passed the House, a few words in explanation of the carrying out of those bills, when enacted into law, would be profitable at this time.

For several years past many organizations have been campaigning for or against the adoption of a leasing system and the final adoption of what is known as the conservation policy of the United States. These organizations, notably the National Conservation Association, the American Conservation Congress, the American Mining Congress, the National Irrigation Association, the Public Lands Conservation and others have attracted the attention of the American public quite generally, and there is no doubt that the general sentiment both east, west, north, and south is in favor of the enactment into laws of the Alaska coal-leasing bill, the oil-leasing bill, and the water-power leasing bill.

Will these people, many of whom are leaders of the country and many of whom have been devoting years of thought and study, stop now in their efforts merely because laws have been enacted or are about to be enacted? The mere passing of a law is not an end, but the means to an end. The ultimate object of these leasing laws was that the public lands should be utilized, but that the resources upon the public lands should not be wasted or monopolized. The enactment of the law permitting the leasing system is only a step. Will these men and women, the best brains of the country, now cease to think upon these subjects, now cease to worry upon these matters, and will they allow inexperienced, uneducated, untrained clerks to draft the regulations under which these laws are to be put into effect, and will they permit individuals in bureaus and departments to

draft and redraft regulations as they see fit and dispose of applicants with unrestrained, arbitrary, high-handed, and, at the same time, ignorant will? Will those who have devoted years of study and thought leave the administration of the laws to the caprice of bureau chiefs and allow untrained individuals to hold in their hands, and to pick and choose, governed only by their own opinions unrestrained by any but their own feelings, the rights of applicants and interests?

Let these conventions continue, let these associations continue, and with more independence than ever, with more definiteness than ever. Now that the legislation is enacted, demand intelligible, sensible, and reasonable regulations which the Supreme Court of the United States says have the effect of laws. Let these associations continue and review the work of these bureaus in the past, and hold up to the inspection of the country every act, good or bad. It is only in this way that the leasing law will be effective. Whether the leasing law will succeed does not depend upon conditions of race, color, nationality, or religion; it depends upon the way in which the laws are administered. If administered arbitrarily and capriciously it is doomed. If it is administered wisely, broadly, and judicially it will succeed. If success in the making of an application where there are several conflicting applicants depends upon the caprice, whim, or arbitrary ipse dixit then the leasing system is doomed. If the selection of the successful applicant over the conflicting applicants is by well-ascertained procedure the law will succeed.

Panama Canal Tolls Question.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 24, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, the American people have just successfully completed the greatest material achievement in the world's history. The Panama Canal is a reality. This great work is built upon American soil. The American flag floats over it and will as long as the Republic shall last. The American people have constructed it at a cost of almost half a billion dollars. The American people are pledged to operate and maintain and protect it for all time. No other nation has contributed anything in its construction. No other nation has assumed any responsibility in regard to it. No other nation has given a dollar toward this mighty achievement, but now that the work is finished the claim is made that the United States, the builder, the protector, and the defender shall have no more rights or privileges in regard to the canal than any other nation. It is urged that we can give no preference to our own ships in the use of the canal. In fact, it is urged by many that the United States shall have fewer privileges with the canal than other nations of the world. It is now contended that we must be content with the glory of the achievement, while the material benefit goes to those who have borne none of the burden of the undertaking. We have brought the crop to the ripening; we must now step aside and see other nations reap the harvest.

Let it be made clear and plain that this claim that other nations shall share equally with us in the benefits of the canal is not made now and never has been made by any other nation of the world. It has been made only by the transcontinental railroads, the Carnegie Peace Foundation propaganda, and their sympathizers. Certainly, under the circumstances, if the other nations of the world have an equal right with us to the use of the Panama Canal, then that claim by every rule of equity and justice must be clear and beyond dispute.

THE HAY-PAUNCEFOTE TREATY.

The claim is made that under treaty obligations other nations have the same rights to the use of the canal as the United States. Here is another strange fact of great significance that should not be forgotten. No foreign nation has ever claimed such right under the Hay-Pauncefote treaty. This claim has only been made by those who directly or indirectly come within the sphere of the transcontinental railroads or the Carnegie Peace Foundation. All these claims come from our own people. These claims are made at home and not abroad.

The claim of equal rights for all nations is made under the provisions of the Hay-Pauncefote treaty. Let us examine this treaty and see upon what foundation this contention rests. It is to be noted that those who make the most strenuous claims that we are violating that treaty seldom refer to its terms.

A treaty is a contract between two nations. Nothing more nor less. It is subject to ordinary rules of construction of contracts. A treaty is made by the contracting parties the same as all other contracts, in view of the circumstances that exist at the time the contract is made and such conditions as might reasonably be anticipated by the parties at the time the contract is made. If the conditions change, then either party has the right to refuse to be further bound by such contract. The treaty becomes voidable at the instance of either party. This is the law; this is justice.

Let us apply this rule to the Hay-Pauncefote treaty. That treaty was signed in 1901. At that time we believed that we would construct that canal on foreign soil, but two years thereafter Panama rebelled and became a separate nation. The United States purchased from Panama the canal strip upon which that work is now constructed. This strip became American territory. There is no dispute upon this question.

The Supreme Court of the United States in the case of Wilson *v.* Shaw (204 U. S., 33) has decided the sovereignty of the United States extends over the Canal Zone just as it extends over every other part of the United States. The British Government in its second note of protest in regard to the canal admitted our sovereignty. This territory having passed from a foreign nation and become American territory since the execution of the Hay-Pauncefote treaty, it is too plain for argument that conditions have changed, and that either party was at liberty to refuse to be further bound by the treaty. No one will argue that either England or the United States at the time that treaty was signed could have reasonably anticipated this change. All admit that conditions did change. This being true, the United States in all justice was no longer bound by the treaty and we were under no obligations whatever to regard it.

The moment Panama became American soil it was no longer subject to treaty regulations. Treaties are negotiated by the President and ratified by the Senate. When the Panama Canal Zone became domestic territory it passed from the realm of treaty regulations to the control of Congress, under the provisions of section 3 of Article IV of the Constitution of the United States, which says:

> The Congress shall have power to dispose of and make the needful rules and regulations respecting the territory or other property belonging to the United States.

I can not see, in view of these changes, in view of the admitted facts by England, the other party to the contract, and by all other nations, how it can be maintained that the United States is to-day in any way bound by the Hay-Pauncefote treaty.

Suppose England had secured the canal strip instead of the United States, will anyone entirely sane pretend that he believes that England would have consented to be still bound by the Hay-Pauncefote treaty and would have permitted the United States to construct the canal on English soil and to control it and fortify it and make rules and regulations for its use? Suppose we had owned the Canal Zone prior to making of the Hay-Pauncefote treaty, as we own it to-day, would anyone for a moment contend that we would then have made the Hay-Pauncefote treaty, or any other treaty, in regard to our right to construct the canal upon our own territory? It would be no more absurd to contend that we would to-day enter into a treaty with any other nation of the world to construct a canal across any State of the Union.

If there could be any question in regard to our right to abrogate the Hay-Pauncefote treaty after it became our own territory, then we have the high authority of Great Britain upon this point. Great Britain did precisely this thing in regard to the Suez Canal. After Egypt became British territory Great Britain refused longer to be bound by certain provisions of the treaty. It is illuminating that Lord Pauncefote, the joint author of the Hay-Pauncefote treaty, should have taken this exact position. Lord Pauncefote, in defending the British Government in its refusal to be bound by treaty obligations, used this language:

> That Egypt, having become British territory since the construction of the canal and the agreement between the powers, Great Britain could not be bound by the neutrality provisions adopted, so far as they affected Egypt, because it was a recognized principle of international law that treaties are only operative so long as the basic or fundamental conditions upon which they are based continue, and that in the event of a fundamental change, such as a change of sovereignty of the soil, any nation which is a party to such treaty could honorably contend that it was inoperative as to her newly acquired territory.

Certainly no other evidence is needed to show, both by common justice and by the action of England herself, that the United States, after acquiring the Panama Canal Zone, was no longer bound by the terms of the Hay-Pauncefote treaty.

But suppose, for the sake of the argument, that the Hay-Pauncefote treaty is still in full force and effect, is it in violation of that treaty for the United States to pass American ships through the canal without the payment of tolls or on different terms from those given to other nations? This entire controversy is based upon rule 1, article 3, of the Hay-Pauncefote treaty, which reads as follows:

The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal; that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

Let it be noted "that the United States adopts these rules." Not England and the United States, but the United States alone. The United States, the proprietor, the one who has the authority to do so, adopts rules for the government of the canal. In other words, it says that under certain conditions other nations may use the canal which it has built. For the United States does not say it will treat all other nations alike, but that it will treat all nations alike that observe "these rules."

The language in treaties is given its ordinary meaning. It would be absolutely foolish to say that in the ordinary meaning of the English language that a person owning and controlling a piece of property and desiring to permit that property to be used by other persons would, in the making of the rules prescribing the terms upon which it should be used, say that he would treat all persons alike that observe these rules and that he would treat himself the same way as he treated other people and obligate himself to obey his own rules.

Suppose a man owned a piece of land and that for the benefit of the public and himself he construct upon that piece of land at great expense a bridge, and that he would then have posted at either end of that bridge a sign saying "all persons" that will pay $1 may cross this bridge. Does that mean that the owner, the man who made the rules, will charge himself a dollar each time he crosses his own bridge? How can a man pay himself anything? How can the United States pay to itself anything for using its own canal?

Suppose that a man owns a piece of land and he posts a notice on that land saying "that all persons crossing this land will be prosecuted." Does the term "all persons" mean himself? Does it mean that he will prosecute himself for walking across his own property? Is such the ordinary meaning given to such language?

But some contend that if the United States, in making the treaty, did not intend to include itself in the term "all nations," then it should have said that it would treat "all nations alike that observe these rules except itself." They would have the bridge owner say I will charge every one that crosses my own bridge a dollar except myself. They would have the landowner say I will prosecute anyone that walks upon my own land except myself. This contention is more absurd than the first one that the term "all nations" includes the owner. Such is not the ordinary use of the English language.

When the United States made the rules regulating the Panama Canal she made them for other nations to observe and not for herself. When she said that she would treat all nations alike, she meant just what she said—that any other nation that would observe the rules that she prescribed would receive equal treatment. But she was not making rules to be observed by the United States.

If these words "all nations" include the United States, then the United States must observe not only rule 1, but all admit that she must also observe the other rules prescribed in section 3. From this conclusion there would be no escape. Let us see for a moment where it will lead if we contend that the United States is included in the expression "all nations observing these rules." Rule 2 says:

The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it.

So that if the United States is included in "all nations," she can not, even in time of war, prevent an enemy from destroying the canal that she has constructed. She can not commit an act of hostility to defend herself or to prevent the destruction of the canal itself, that has been built for the benefit not only of the United States but all mankind. Will anyone contend for such absurd and unjust construction of the Hay-Pauncefote treaty?

Rule 3 says:

Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.

If the United States is included in the term "all nations," then we are absolutely prohibited from taking on stores in the canal. We are absolutely prohibited from keeping any stores there for the use of our naval vessels. We can not stop our naval vessels in the canal. Will anyone contend for so dangerous and ridiculous a construction of the Hay-Pauncefote treaty?

Rule 4 says:

No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

If the United States is included in the term "all nations," then we can not keep troops upon the canal; we can make no preparations to defend it; we can not disembark troops upon the canal. Will anyone contend for such foolish and absurd construction of the Hay-Pauncefote treaty?

Rule 5 provides:

The provision of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time.

If the term "all nations" includes the United States, then we can not keep our vessels of war within 3 marine miles of the canal or in the neighborhood of the canal longer than 24 hours at any one time. If we shall be at war with any nation, we shall not pursue them for 24 hours after they depart from the canal. We will be compelled to let any nation pass their naval vessels through the canal, even to attack us, and then give them 24 hours after they get through the canal before we dare pursue them.

If "all nations" includes the United States, then if we were at war with Germany and she desired to attack the Pacific coast she could bring her fleet to the entrance of the Panama Canal on the Atlantic coast and we would then be compelled to let her pass her vessels through the canal on exact terms that we would pass our own, although we knew she was taking her ships through for the purpose of attacking us. And after she passed through the canal, if we had our battleship fleet on the coast ready for that purpose, we would not dare pursue her vessels for 24 hours thereafter. It does not seem to me possible that any sane patriotic American can contend for a construction of the Hay-Pauncefote treaty so unjust and dangerous, so absurd and idiotic; and yet this must be the conclusion that you must reach if you contend that the term "all nations" used in section 1, article 3, of the treaty includes the United States, for if the United States is bound to observe one rule in that section she must observe all.

Again, it is perfectly clear that if the term "all nations" includes the United States, and if we can not pass through the canal free our vessels of commerce, that we can not pass through our vessels of war, for the two are treated exactly the same, the provision of the treaty being the canal shall be free and open to "vessels of commerce and of war"; so if it is a violation of the treaty to pass a commercial ship through the canal, it is a violation of the treaty to pass a naval vessel through the canal.

In the name of the American people who have paid the enormous sum for the construction of this canal, what have we constructed it for, if we are to accept the contention of the transcontinental railroads and Great Britain, that we are bound by the terms of the Hay-Pauncefote treaty, as they construe it?

TERMS OF ENTIRE EQUALITY.

But, again, let us suppose that the treaty does mean that the words "all nations observing these rules" includes the United States, and that all nations, including the United States, shall use the canal "on terms of entire equality," does that mean that all vessels of all nations, including the United States, shall be charged the same tolls? Does charging the same tolls mean that the vessels of all nations would then be using the canal "on terms of entire equality." The United States has invested in the canal some $400,000,000. Other nations have invested nothing. The United States will pay $27,000,000 per year in the operation and the maintenance of the canal, if a reasonable charge upon the capital invested is included. Other nations will pay nothing. It is estimated that it will cost the United States $17,000,000 annually more for the maintenance of the canal than she will collect in tolls from other nations and from her own ships. Is it fair to the United States to place all these great burdens upon her that the other nations of the world do not bear and still

charge her as much as other nations for the use of the canal? Would that be putting the United States upon terms of entire equality? I submit that it would take a twisted mentality under such conditions to contend that the United States was being treated by herself in the use of her own canal upon terms of entire equality if she carried all these vast burdens and still charged herself the same rate of tolls that she charges the vessels of other nations.

NEUTRALIZATION OF THE CANAL.

Again, it will be observed that article 3 and all the rules thereunder of the Hay-Pauncefote treaty refer to what shall be done in time of war and not in time of peace. The words are, "The United States adopts, as the basis of neutralization of such ship canal." "Neutralization" means to keep it neutral, to keep it from being used by belligerents in time of war, except in accordance with rules and regulations that the United States shall prescribe. To say that these rules are adopted as a basis of neutralization for nations in time of peace would be a contradiction of terms.

It seems to me that the whole controversy in regard to rule 1 of article 3 rests upon a false foundation. This rule was made to protect the canal in time of war, and has nothing to do with the vessels of commerce in time of peace. Article 2 provides for the control of the canal in time of peace. It reads:

It is agreed that the canal may be constructed under the auspices of the Government of the United States, * * * the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

It will be observed that the United States has the exclusive right of providing for the management and regulation of the canal, and in addition "shall have and enjoy all the rights incident to such construction." If to use the canal for the use of our own ships is not a "right incident to construction," then what is? From a commercial standpoint the right to use the canal for the passage of our own ships is the main purpose. Under that provision of the treaty certainly the United States has the right to pass her ships through the canal as she sees fit, or else the rights "incident to construction" mean nothing.

I can not understand how anyone can read these two sections of the treaty together and still contend that we can not pass our ships through the canal free, even if the Hay-Pauncefote treaty is still in full force and effect, without violating any provisions of that treaty.

We made a treaty with Panama on November 18, 1903, and in that treaty we gave Panama the right to pass her vessels through the canal "at all times without paying charges of any kind." This provision is in express violation of the terms of the Hay-Pauncefote treaty, that all nations should be treated alike in regard to the canal, but Great Britain did not protest against this provision, and no other nation protested. Evidently at that time Great Britain and all other nations believed that as the ownership of the canal had come to us that we had a right to do as we pleased with it. In other words, that the Hay-Pauncefote treaty was no longer in force.

In 1909 we negotiated a treaty, which was signed but not ratified, with Colombia. In that treaty in article 2 it was agreed that the Republic of Colombia should have the right—

at all times to convey through the ship canal now in course of construction * * * troops, materials for war, and ships for war without the payment of tolls or charges.

This treaty was negotiated by the Hon. ELIHU ROOT, then Secretary of State. It demonstrates what construction Mr. ROOT placed upon the treaty when he was charged with the great responsibility of this great office and when he represented the interest of his country. He believed then, evidently, that the United States was not bound by the provisions of the Hay-Pauncefote treaty, for the provision quoted is in express violation of the terms of that treaty.

Mr. ROOT at that time recognized that when we acquired the Canal Zone and it became American territory that the Hay-Pauncefote treaty became at once voidable. At that time he believed that the United States had a right to do what she pleased with her own canal, constructed on her own soil. However much Mr. ROOT may strive, as the mouthpiece of the Carnegie Peace Foundation, to discredit his own work when Secretary of State, the people of this country have more confidence in his opinion and his patriotism when he was under the great responsibility, when the matter was fresh in his mind, as expressed in the solemn treaty with Colombia, than they have as expressed in his widely circulated speech upholding the attitude of the transcontinental railroads and the British contentions.

Is it not strange that Mr. ROOT thought that we could extend to other nations the right to pass their ships through the canal free, but could not extend that privilege to our own? The American people have more confidence in the opinion of Mr. ROOT, Secretary of State, than in the opinion of Mr. ROOT, attorney.

THE CLAYTON-BULWER TREATY.

It is contended by some who claim that we are violating our treaty obligations that those obligations are contained in section 8 of the old Clayton-Bulwer treaty, signed July 5, 1850. A reading of that old treaty and the Hay-Pauncefote treaty shows that such contention is exceedingly technical and uncertain and has no foundation in fact. There was no reason whatever why we should have referred to the Clayton-Bulwer treaty and the Hay-Pauncefote treaty, so far as constructing the canal across the Isthmus of Panama is concerned. In the first place, the Clayton-Bulwer treaty does not apply to the Isthmus of Panama.

The main contention in regard to the Hay-Pauncefote treaty, taking into consideration the terms of the Clayton-Bulwer treaty, is that England yielded some valuable concessions to the United States that she had under the Clayton-Bulwer treaty when she made with us the Hay-Pauncefote treaty. There is no foundation whatever for any such contention. All this argument is swept away absolutely by the fact that is generally forgotten that in 1846 we made a treaty with Colombia that gave us the right to construct a canal across the Isthmus of Panama. All this talk about England yielding some valuable right under the Clayton-Bulwer treaty is demonstrated to be mere pretext when you recall that we had the right to construct the Panama Canal four years before the Clayton-Bulwer treaty was made.

But it is only necessary to read the first section of the Hay-Pauncefote treaty to forever dispose of any claim that may be made under the Clayton-Bulwer treaty. The first article of the Hay-Pauncefote treaty says, referring to the Clayton-Bulwer treaty:

The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

Those plain words forever settle all claims that England has any right under that old treaty.

COASTWISE TRADE.

Another question that is much debated is whether or not even if the Hay-Pauncefote treaty is in full force and effect, is it violated by the United States passing her ships through the canal in the coastwise trade without the payment of tolls? This is the exact question invcived in the proposed repeal of the present law. The claim that to pass our ships through the canal free in the coastwise trade would be a violation of the treaty is based upon the language already quoted in rule 1 of section 3 of the Hay-Pauncefote treaty, when it says:

The canal shall be free and open to vessels of commerce and of war of all nations observing these rules on terms of entire equality.

Our present law says:

No tolls shall be levied upon vessels engaged in the coastwise trade of the United States.

The present bill in Congress proposes to strike these words from the law.

Our coastwise trade is our domestic trade. Only vessels flying the American flag are permitted to engage in it. It is reserved entirely for American ships. Does it then violate rule 1 of the Hay-Pauncefote treaty above quoted, even if we give the construction to it contended for by those who favor the repeal of the present law?

In 1815 we made a treaty with England, and that treaty is now and has been in force ever since. That treaty says:

That no higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels than those payable in the same ports of the United States, nor in the ports of any of His Britannic Majesty's territories in Europe on the vessels of the United States than shall be payable in the same ports on British vessels.

Compare the language of that treaty with the much-discussed language in rule 1 of the Hay-Pauncefote treaty, which says:

The canal shall be free and open to vessels of commerce and of war of all nations observing these rules on terms of entire equality.

No one will for a moment contend but what the language of the treaty in 1815 is much more specific and emphatic in saying that each nation shall treat the vessels of the other the same as their own than is the language in the Hay-Pauncefote treaty. In the treaty of 1815 it specifically says that "no higher or other duties shall be charged" American vessels in British ports in Europe than are charged to British vessels.

If we would violate the Hay-Pauncefote treaty by charging British vessels more than we charge our own for passing through the Panama Canal, then England violated that treaty of 1815 every day up until a few years ago when she admitted all vessels to engage in her coastwise trade in Europe. For

almost a century in spite of that treaty, every time an American vessel entered a British port it paid "higher and other duties and charges" than did a British ship of the same character engaged in the coastwise trade. Yet the treaty plainly and specifically says that Great Britain shall not charge American vessels any higher duties or charges than she does British vessels, and still she did it as long as she had a coastwise trade. Yet when we propose to do the same thing with British vessels passing through the Panama Canal under a treaty where the language is not nearly so clear or so strong, her worshipers in this country preach and prate about national honor.

England contends and always has contended that where the word "vessels" is used in any treaty, it means "only vessels engaged in foreign trade." She has always contended that the coastwise trade is entirely domestic commerce; that it concerns only the nation to which it belongs and is not subject to treaty, and is never within the purview of treaty obligations. England has always contended that any nation had a right to do as it pleased with its coastwise trade, and that by so doing it would not violate any treaty obligations for the reasons already stated.

In this position that coastwise trade was entirely domestic, and that any nation had the right to do with that trade as it pleased, and that it was not covered by treaty stipulations, England has always been in exact accord with the United States. No other contention was ever made until the attorneys for the transcontinental railroads and the Carnegie Peace Foundation raised it in this Panama Canal controversy in an effort to stop American ships that would be competitors with the railroads from passing free through the canal. Fortunately, the exact question that is now attracting so much attention has been directly and specifically decided by the highest legal authority of the world, the Supreme Court of the United States. The State of Texas imposed "higher and other duties or charges" on foreign vessels entering her ports than she did on American vessels engaged in the coastwise trade. A British vessel owner thought that such treatment was in violation of the language of the treaty of 1815, above quoted, and brought suit. The case went to the Supreme Court, and the exact point is decided in the case of Olsen *v.* Smith (195 U. S., 332). The court held that although the treaty said that "no higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels than those payable in the same ports of the United States," that Texas did not violate that treaty by imposing duties and charges upon foreign vessels for entering her ports and by permitting American vessels in the coastwise trade to enter her port free from all charges. This is the exact question now in controversy. Judge White, now Chief Justice of the Supreme Court, and one of the greatest lawyers that this Nation ever produced, wrote the opinion. He disposed of the contention of those who are now making so much disturbance about violating our treaty rights and have so much to say about "national honor" in a single sentence in that decision. He says:

> Neither the exemption of coastwise vessels from pilotage resulting from any law of the United States nor any lawful exemption of coastwise vessels created by the State law concerns vessels in the foreign trade, and therefore any such exemptions do not operate to produce a discrimination against British vessels engaged in foreign trade and in favor of vessels of the United States in such trade.

Thus, England and the United States, the parties to the Hay-Pauncefote treaty, have both decided, and daily follow that decision, that every nation can impose upon foreign ships such charges or duties as it may see fit, for the use of its ports, rivers, or canals, or any other waters, and grant that same privilege free to their coastwise vessels without in any way infringing treaty rights, no matter what the treaties may provide about equal treatment for the vessels of other nations, because "vessels" in a treaty does not include vessels in the coastwise trade. The reasons given by Judge White for such construction are unanswerable. It does not take a lawyer to understand them. He states that coastwise trade, being reserved entirely for American vessels, and foreign vessels not being permitted to engage in it under any circumstances, it is impossible for there to be a discrimination against a foreign vessel.

This is the law, this is justice, and this is plain common sense, and all the arguments of learned corporation lawyers made to mislead and confuse and all the high-browed criticism of that class ever ready to denounce the attitude of their own country in any contest with foreign nations, under the impression that such action shows great intellectual superiority, can not prevail against it.

Secretary Hay and Lord Pauncefote were both familiar with the language of the treaty of 1815 and the construction that both countries placed upon it. This treaty was before them when they were drawing the Hay-Pauncefote treaty; they knew the construction given it by both countries, and if it had been intended that the Hay-Pauncefote treaty should apply to American vessels in the coastwise trade they would have specifically so provided. No other construction of their actions under the circumstances is possible.

And finally let it be emphasized over and over again that England does not now and never has contended that to pass our ships in the coastwise trade through the canal free would be in violation of the Hay-Pauncefote treaty. There is wide misapprehension upon this point. The general impression seems to be that England is making a great protest in regard to this law giving that right to our coastwise ships on the ground that it violates our treaty. This is not so. England is not making any such contention. This protest is made only by British worshipers in this country and not by England herself. It may be strange, but it is true, that while some in this country are shouting that we are discredited, that we are violating national honor and our solemn treaty obligations with England if we do not repeal the present law, yet England, the party to the contract, the nation that is supposed to be outraged and wronged, makes no such claim. She could not honestly and consistently do so in view of her own practice for a century, and she does not do so. She leaves that high moral duty to her friends and defenders in this country.

Not only has England, nor any other nation, never claimed that it is a violation of the Hay-Pauncefote treaty for the United States to pass her coastwise ships through the canal free, but England has expressly admitted that under the terms of the treaty and under the construction that England herself places upon that treaty we have that right. The British Government admitted that right in the most formal and solemn manner when, in the second note to our State Department in regard to this controversy, it was stated:

> If the trade should be so regulated as to make it certain that only bona fide coastwise traffic, which is reserved for United States vessels, would be benefited by this exemption, it may be that no objection could be taken.

So all this protest and noise, all this sound and fury about treaty obligations, about national honor, about national humiliation, comes to this, that England, the party to the contract, the quickest and most persistent nation in all the world to demand every right—technical, real, or imaginary—admits that we have a right to do exactly what we have done. England admits this right and admits it without protest.

For almost two years the law giving us this right has been upon the statute books, and England and every other nation of the world has accepted this law and recognized our right to do what we have done. Nowhere in all the world is this right disputed, except in this country by so-called Americans. Is it the patriotic duty of American citizens, and especially of American public officers, to cry out that we are violating our treaty rights, that we are violating national honor, that we are playing a dishonorable part, when no other nation of the earth is making any such claim? Is such action on the part of some of the public men in this country most truthfully described by the term "patriotic" or by the term "treasonable"? It seems almost incomprehensible that any public official could be so misled by the influence of the transcontinental railroads and the Carnegie Peace Foundation Society as to take such attitude.

SUMMARY IN RELATION TO THE TREATY.

To sum up, the Hay-Pauncefote treaty is not violated by passing our vessels through the Panama Canal without the payment of tolls, for the following reasons:

First. Because since the execution of that treaty conditions have changed, and such change released the United States from all obligations under that treaty.

Second. The Panama Canal is built on American territory, and under the Constitution Congress has the power to deal with it as it wishes, the same as that of other domestic territory, and such territory is not covered by treaty stipulations.

Third. Even if it is admitted that the Hay-Pauncefote treaty is in full force and effect, the term "all nations," used in rule 1 of article 3, means only "all foreign nations," and does not include the United States, the owner that makes the rules.

Fourth. Even if the construction placed by those in favor of repeal upon the Hay-Pauncefote treaty is admitted, under the practice followed by both England and the United States for a hundred years the treaty does not include coastwise trade, and does not, therefore, interfere in any way with the United States passing ships in the coastwise trade through the canal free.

Fifth. Article 3, and all the rules thereunder, of the Hay-Pauncefote treaty applies only in time of war and not in time of peace.

Sixth. The United States Supreme Court has specifically decided the question in controversy and has held that for the United States to pass her vessels engaged in the coastwise trade through the canal would not violate the Hay-Pauncefote treaty, even if it is in full force and effect and given the construction that those in favor of repeal place upon it.

Seventh. England, the other party to the Hay-Pauncefote treaty, specifically admits that under that treaty the United States has the right to pass her vessels in the coastwise trade through the canal free.

Eighth. Neither England nor any other nation has protested, or is protesting against the present law upon the statute books giving the United States the right to pass vessels in the coastwise trade through the canal without the payment of tolls.

After a study of the treaty and the law and the facts and circumstances, and the right and justice of the case, and the admission of England and the other nations of the world, it seems almost incredible that anyone should seriously contend that the United States has not the right to pass through her own canal her own ships engaged in her own domestic trade upon any terms that she might see fit. Such contention is made to-day only by those who are within the sacred zone of the influence of the transcontinental railroads, or breathe the holy atmosphere of the Carnegie Peace Foundation. May He who directs the destiny of all save our country from the pure and patriotic guidance of such unselfish, self-appointed, "holier than thou" guardians of our Nation's honor and our Nation's welfare.

ARBITRATION.

The question, of course, is naturally asked why should not this difference in relation to the Hay-Pauncefote treaty between the United States and Great Britain be submitted to arbitration.

I am opposed to arbitration, because, in the first place, we would be compelled to submit our claims to a prejudiced court. The jury would be packed against us. It would be to the interest of every other maritime nation of the world to decide against our contention. Under such circumstances we could not expect justice in submitting to arbitration.

Again, I am opposed to arbitration because the control of the Panama Canal is a domestic question. We can not submit to arbitration questions concerning our internal affairs without renouncing the right of sovereignty. When we submit to arbitration domestic questions we cease to be a Nation.

Our arbitration treaty with Great Britain contains this language:

Provided, nevertheless, That they do not affect the vital interests, the independence, or the honor of the two contracting States, and do not concern the interests of third parties.

I think this question does vitally affect the independence and the honor of the United States, and for this reason we should not arbitrate.

But however we may disagree about other matters, certainly there can be no contention that we could not submit this question to arbitration under the provision above quoted, which says that this can not be done when the interest of the third party is concerned. Panama is even more vitally interested in this question than the United States. Under our arbitration treaty we could not with honor arbitrate this question without we first obtained the consent of Panama. Can we afford to disregard the vital rights of Panama because it is a weak and small nation at the request of England, whose interests at most are not vitally affected, because she is a great and powerful nation? Certainly those who have had so much to say about maintaining national honor can not consistently advocate arbitration unless that request comes from Panama as well as from Great Britain.

SUBSIDY.

Many of those who are opposed to the present law in relation to the Panama Canal tolls finding that they can not hide behind the treaty seek other reasons for their opposition to their country's interests and for breaking their platform promises and their pledges to the people. They have discovered in this extremity that to grant free passage to our coastwise vessels through the canal is a subsidy paid to coastwise vessels. Those who make this argument are either insincere or muddy-minded. Reason demonstrates absolutely the fallacy of their contention.

It will not benefit ships in the coastwise trade to have free tolls, or injure them to pay tolls. Our coastwise trade is a monopoly reserved exclusively for American ships. Each ship in that trade will bear exactly the same burden of each of its competitors; therefore they will all be upon an equality. No vessel will be under any disadvantage. This being true, all vessels being on an equality, they will simply pass the burden on to the shipper and the shipper will pay the tolls, and in return the shipper will pass this burden to the consumer. To illustrate: Suppose that two companies owned all the vehicles that did all of the transfer work in a city and no other competitor would be permitted under any circumstances to enter this field, and that city imposes a license of so much for each vehicle operated by each of these companies, and each company had the undisputed right to fix the rate that they charge. Will anyone argue that the payment of this license is a burden upon the companies having the monopoly and that these companies will not consider the license they will be compelled to pay in fixing their rates? If coastwise vessels pay a toll and being entirely safe from outside competition, is anyone so simple as to think that they will not take this into consideration in fixing freight rates?

If the present law is repealed, then a 5,000-ton ship passing from coast to coast will pay about $6,000 tolls for going through the canal. Suppose that a lumberman on Puget Sound wishes to charter a ship of that character to carry a cargo of lumber to New York. Does anyone believe that the owner of such vessel will not consider that toll that he must pay of $6,000 in fixing the rate of charter that he will charge the Puget Sound lumberman? If any such there be, then the only fitting place for him is in the asylum for the feeble-minded. Of all the insincere, ridiculous, and cowardly excuses for doing an unjustifiable and unpatriotic thing, this cry saying "free tolls is a subsidy" for the benefit of the vessels in the coastwise trade has never been surpassed. I know that coastwise shipowners do not care whether a toll is charged or not, so far as their business is concerned. I know it by being for many years in close acquaintance with this great industry. I know it because I know that the men in that industry possess at least ordinary intelligence. To say that the shipowner, if he pays the tolls, will not include it in his freight charges is to discount human selfishness and insult childish credulity.

THE RAILROADS AGAIN.

There are many strange things about this subsidy cry, and one of the most strange and sinister is the earnestness with which it is promulgated by the transcontinental railroads. Never before has such protest come from that source. If this is a subsidy, then the more than $40,000,000 that we pay annually to improve our rivers and harbors is a subsidy. We have paid to improve the Mississippi River and its tributaries more than we have to build the Panama Canal. This vast sum is a subsidy.

Let it be remembered that no American ship in the coastwise trade pays one cent to use any American harbor or river or canal or other waterway, although we pay millions of subsidy annually to improve them. We have 12 canals in this country, exclusive of the Panama Canal. We pay more than $2,000,000 annually for their maintenance and operation, and not one penny of tolls is paid by any ship under the American flag in the coastwise trade for using them. Certainly if a free canal at Panama constitutes a subsidy, then these other free canals constitute a subsidy. The 12 other canals are the same in all respects as the Panama Canal.

The Government has paid millions of dollars to construct the great Soo Canal, and they are paying millions of dollars annually to maintain it and to operate its great locks. Through it passes the greatest commerce in all the world. This commerce is borne almost entirely by ships that belong to the Steel Trust and to the railroads and other gigantic monopolies. These vessels pay nothing, and no one of the "subsidy" opposers now making such vigorous protests in regard to subsidy at the Panama Canal is opposing the subsidy paid to these vessels. Why is it that they are so much opposed to subsidy at the Panama Canal and are in favor of it at the Soo Canal? Why should not the vessels belonging to the railroads, the trusts, and combines that pass through the Soo Canal pay a sufficient toll to meet the expense of the maintenance of that canal and the operation of its locks?

We have paid more than $800,000,000 in improving our rivers and harbors, and every American ship in the coastwise trade uses them without paying one penny. Why should an exception alone be made in reference to the canal at Panama? Where is the difference?

Let me again point out that no subsidy-denouncing, monopoly-hating, railroad-loving patriot that has shouted and foamed about the subsidy at Panama has dared to even introduce a bill to stop this gigantic subsidy that is paid to all the other waterways of the Nation. Why this oversight on the part of these zealous guardians of the Nation's honor and the Nation's Treasury? Is it to be found in the fact that practically all of the subsidy that is paid on all the other waterways of the Nation go to railroad-owned vessels? The railroads of this country own or

control practically all the vessels now engaged in the coastwise trade that now have the free use of our canals, our rivers, and our harbors. These vessels have for years received without protest what the enemies of the present law are pleased to call a "subsidy."

The subsidy—if it is a subsidy—that will go to the ships that will pass through the Panama Canal under the present law will go to independent vessels, vessels that are competitors of the railroads. Is here to be found the real explanation of this sudden protest against the subsidy at Panama while favoring all the other subsidy that is paid? If not, it is at least due that these new-found and noisy enemies of subsidy explain their position.

I repeat that for years we have been paying without protest millions of dollars of subsidy for the benefit of railroad owned and controlled vessels without objection from the same gentlemen who are now crying out and making such patriotic protests the moment we propose to pay the same kind of a subsidy in the same way to the independent steamship lines that will become competitors of the transcontinental railroads and the ships owned by the railroads.

Is a subsidy to be condemned when paid to independent steamship lines and commended when paid to railroad-owned lines? Are we to have free tolls on all the waterways of the country where it will benefit the railroads, and not on those waterways where it will benefit independent companies?

At every point and at every turn in regard to the Panama Canal you meet the railroad influence. Who is it to-day that is crying subsidy? The attorneys of the transcontinental railroads, the very men that have all their lives favored and fought for special interests. Who else? The friends and champions of the Canadian Pacific Railroad. Who else? Those who are interested in the British owned and controlled Tehuantepec Railroad in Mexico. Who else? All those who have been flattered and influenced by the Carnegie Peace Foundation. Who else? All those who think it shows intellectual superiority to take sides against the United States in any controversy with Great Britain. Who else? Democratic officeholders who in fear and humiliation are looking for some excuse to give to the people for repudiating their platform and breaking their promises. These, and these only, are to-day shouting "subsidy."

DEMOCRATIC PLATFORM.

Does the exemption from tolls of ships in the coastwise trade passing through the canal constitute a subsidy? The Democratic platform says:

> We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.
>
> We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

Clearly, the intention of the language quoted from the Democratic platform was to give the impression that the exemption of the tolls was not a subsidy, for it declares against a subsidy and for the exemption of the tolls. If, then, the exemption of the tolls is a subsidy, the Democratic platform is both dishonest and hypocritical and purposely drawn to deceive the American people. If the Democratic Party believed that the exemption was a subsidy, then in its platform it deliberately sought to secure votes under false pretenses. If free tolls is a subsidy, then the Democratic Party stands before the world discredited and convicted of dishonesty and fraud.

Of all the weak, maudlin, discreditable explanations ever yet given for repudiating the Democratic platform, the weakest and most discreditable is the one put forth by some of those high in Democratic authority that the first part of the platform having declared against "subsidy," that part declaring for "free tolls" must be disregarded. That plank in the platform means either that the Democratic Party did not regard the exemption as a subsidy or that it was trying to deceive the people and to make them think it was not a subsidy in order to get the votes of both those who oppose the subsidy and those who favor a subsidy. Democrats who say that free tolls is a subsidy are trying to prove their virtue now by showing their duplicity and dishonesty at Baltimore.

DEMOCRATS AND SUBSIDY.

What is there in the record of the Democratic Party that shows its sincerity when they denounce subsidy? We pay millions of subsidy annually to help special interests and no Democrat opposes it. The Agricultural bill is a striking illustration. Here we pay millions of dollars of subsidy, and this subsidy always receives the enthusiastic support of the Democratic Party. We pay a subsidy of $63,000,000 a year directly to the magazines and other publications in this country. This is paid to a special interest. This is a gift from the Public Treasury to a special interest to make it profitable. In return for this enormous subsidy the Government receives nothing. No public service is even attempted to be performed in return for these millions paid to a special interest. A Republican President called the attention of the country to this immense subsidy and urged that it be no longer paid. The Democratic Party unanimously favored the paying of this subsidy then, and they favor it now. No word has come from a Democratic President denouncing this subsidy, although he denounces one, small and insignificant by comparison, that his platform specifically favored, and that he favored when he was a candidate, that is to be paid to the competitors of the transcontinental railroads to reduce the freight rates throughout the country.

The Democratic Party favors all the great subsidies that are paid to improve our rivers and harbors. The Democratic Party favors a subsidy to destroy the cotton-boll weevil. It favors a subsidy to kill the cattle tick. The Democratic Party favors any subsidy where all or a substantial part of it can be used in the South, and always has.

The Democratic Party favors paying millions of dollars subsidy to any and every industry, except to certain ships that are competitors of the railroads. It favors paying a subsidy to every coastwise vessel in the United States that is owned or controlled by a railroad. Why does the Democratic Party oppose this one subsidy paid to the independent shipping competitor of the railroads and favor all the others? For two reasons: First, because the railroads oppose this subsidy, therefore the Democratic Party opposes it; and, second, because no part of this subsidy can be directly expended in any Democratic congressional district.

I speak according to the record when I say that, with all the denunciation of subsidy by various Members of Congress of all parties in the last decade, never has any Member of Congress in either the House or the Senate—Democrat, Republican, or Bull Moose—ever opposed any subsidy that was to be expended in his own district. As defined by the votes and voice of every Member of Congress—Senator or Representative—a subsidy is "a wise and necessary expenditure of public money if I get it, and it is a graft paid to a special interest if you get it."

THE DEMOCRATIC SHIP SUBSIDY.

Is the Democratic Party sincere when it cries out against subsidy? The Underwood tariff law, recently written upon the statute books, contains a subsidy for ships. This is the most indefensible subsidy ever written on the statute books of a civilized nation. This subsidy will not cause a single American ship to be built. It will not cause a single American ship to make an additional voyage. This Democratic subsidy, passed by a Democratic Congress, approved by a Democratic President, actually pays more to a slow, antiquated tramp vessel for bringing a single case of champagne from Europe than it pays to a modern steamer to bring a cargo of rubber and coffee, worth millions of dollars, from South America. This Democratic subsidy law actually pays more to an old tramp vessel for bringing a single bottle of cheap perfume from Europe to this country than it pays to one of the mighty steamers on the Pacific to bring a cargo of 20,000 tons of tea and meat from the other side of the world to our shores. And yet in the face of this most discreditable of all subsidies the President and other Democratic leaders, seeking some way to cover up their platform repudiation, their betrayal of the people, their cowardly surrender to British influence and the transcontinental railroads, piously shudder at a subsidy to be given to the independent steamship lines of the country, the only competitors of the transcontinental railways that would pass through the Panama Canal. Never before in the history of American politics has there been so much sniveling hypocricy in high places as there is in the Democratic Party to-day.

WHO GETS THE TOLLS?

It is known by all men that the railroads did everything within their power to prevent the construction of the Panama Canal. They are doing everything within their power now to restrict its use as far as possible. They never work against their own interests.

If a ship in the coastwise trade pays tolls, it simply adds that much to the freight charges, and the consumer and the purchaser—the American people—pay it. But, say some of the so-called experts, the tolls will be so low that they will be no burden on commerce, and the shipowner alone will bear it. If that be true, then a tax is no burden. If $1.25 per ton is not a burden on commerce, will $2.50 per ton be? At just what point will the shipowner begin to place the burden on the consumer? Certainly it is axiomatic that all tolls are a burden on commerce. If not, then all the vessels upon all our waters and all

the railroads that span our country should pay tolls, for they alone would bear the burden. If this is true, then the vast problem of taxation is forever solved. Such economical nonsense does not deserve serious consideration. The experience of mankind demonstrates that every tax is a burden and every toll is a tax. The tax at the canal could be increased until it would as completely close the canal as if the giant locks were torn from their firm foundation.

But are the present charges so small as to constitute but little burden upon our domestic commerce? The toll charges on a thousand feet of lumber carried from Seattle to New York, if the present law is repealed, will be $1.50 per thousand. One dollar and fifty cents per thousand would be a large profit for the manufacturer of the lumber.

But the greatest economical fact is not the $1.50 per thousand paid upon the lumber that is carried through the canal, but this: A $1.50 will be added to every thousand feet that is carried by the railroads from Seattle to New York. The Panama Canal tolls will not only be added to the freight carried through the canal, but it will be added to every ton of freight that is carried by the railroads to competitive points. It was to escape this mighty tribute to the railroads that the demand for free tolls for American ships in the coastwise trade was made by the American people. Probably ten times as much freight will be carried to competitive points by the railroads as will be carried by coastwise vessels passing through the canal. Therefore every dollar that we would compel the ships to pay into the National Treasury under the delusion of helping to pay the expense of the canal we would compel the people to pay $10 into the treasury of the transcontinental railroads.

By the imposition of tolls on American coastwise trade we enable the railroads to add $60 per car for every carload of lumber or canned salmon or wheat or other freight that is carried from the Pacific to Atlantic markets. Is that an insignificant burden? By repealing the present canal-tolls law we will enable the railroads to charge $60 additional for every carload of steel or dry goods or furniture or other freight that they carry from the Atlantic to the Pacific coast. Is that a tax so small as to constitute no burden? It is this great increase of freight rates by the railroads that the imposition of the tolls will permit that is the most important commercial factor in this great question. By imposing tolls we pay a subsidy to the railroads ten times as great as the tolls themselves, and place an unjust burden upon all our citizens for the benefit of the railroads. Here you have the real reason why the railroads are opposed to a free canal for American ships.

It is not the treaty nor the national honor nor the desire for peace that has worked up the repeal sentiment in this country. It is the railroads. No protest was heard from any quarter against the proposal to pass our coastwise vessels through the Panama Canal free until we also included a provision that would prohibit railroad-owned vessels from passing through the canal.

The railroads own or control practically all of the vessels in the coastwise trade. As long as they were permitted to pass these vessels through the canal they were satisfied. They would simply still be doing what they had always done, be competing with themselves, as President Wilson said in his famous speech when a candidate approving free tolls for American ships. Of course, to this happy condition the railroads have no objection, but the moment the provision against railroad-owned ships went into the law trouble began. The Canadian Pacific Railway was hit by this provision. Immediately a delegation from Canada went to England to protest, and then for the first time, after 10 years of silent acquiescence on her part, England began talking about the violation of the Hay-Pauncefote treaty.

There never has been any real competition in this country between the water and rail transportation. The people believed that this "consummation so devoutly to be wished," for which they had worked so long and paid so much, would be a reality with the completion of the Panama Canal. But again they are to be betrayed. Again their hopes are shattered. Again the railroads have triumphed. You may look at the canal question from any angle, upon any phase of it, and always and ever it presents the same question, the railroads versus the people.

DEMOCRATIC PROMISES.

Never before in all the history of American politics is there to be found such brazen betrayal of party promises and party pledges as is now shown by the Democratic Party in regard to the Panama Canal tolls question. The Democratic platform at Baltimore says:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

There can be no mistake about that language. The only way to escape from it is to shamelessly repudiate it, as the Democrats have done. The President, when he was a candidate seeking votes, said of that plank in the platform, when speaking on August 16, 1912:

Now, there is another matter. You know, we are digging a tremendous ditch across the Isthmus of Panama. It is predicted by the engineers in charge of that colossal enterprise that we shall be able to open it to the ships of the world by the year 1915. What interest have you in opening it to the ships of the world?

One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports; to allow all the farmers on what I may, standing here, call this part of the continent to find an outlet at ports of the Gulf or the ports of the Atlantic seaboard and then have coastwise steamers carry their products down around through the canal and up the Pacific coast or down the coast of South America.

Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it had passed the House—provides for free toll for American ships through that canal, and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? [Applause.] We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

The President could see the sinister railroad influence then, when he was a candidate; why can he not see it now? When he exclaimed, "You see the object of that, don't you," it was received with applause. Evidently the audience to which he was speaking saw what the candidate for President then saw, that the object of giving American ships the right to pass through the Panama Canal without the payment of tolls was to get competition between these ships and the transcontinental railroads in order to reduce freight rates. You will notice that he said that what we desired was—

To be perfectly sure that you are going to get better rates around the canal than you would across the continent.

He did not then denounce that plank in the platform as a subsidy when he was seeking the votes of the people. He understood it perfectly then. What has come over the "spirit of his dreams"? Why does he denounce as a subsidy now what he commended then? In that same speech the President used the following language:

Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines, and who are not waiting to see whether they can catch votes with these promises before they determine whether they are going to act upon them or not.

They know the American people are now taking notice in a way in which they never took notice before, and gentlemen who talk one way and vote another are going to be retired to very quiet and private retreat.

If the plank in regard to free tolls in the Democratic platform was not used as "molasses to catch flies," what was it used for? If it was made to be kept, why has it been so quickly repudiated?

Suppose Candidate Wilson on that August day had taken the position he now takes, squarely repudiating his platform and his promises to the American people, would his utterances have been received with applause? Would he have ever been called President Wilson? One thing is certain, the chances were so great in taking the attitude that he now takes when he was a candidate that he did not dare to do it.

In the closing sentence the President warned those who did not keep their platform promises that the people would retire them to private life.

Mr. Bryan, not to be outdone by the candidate for President in denouncing those who do not keep faith with the American people by holding fast to platform promises, declared that "a man who violates the party platform is a criminal worse than the man who embezzles money."

Both these great Democrats and every Democrat in America subscribed to the final plank in the Democratic platform, which says:

Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign, and we invite the cooperation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country.

The Democratic Party has broken that promise. They have brazenly and openly repudiated that platform in their desire to do the bidding of the transcontinental railroads and to purchase the friendship of England. Yet, in the face of this perfidy and repudiation, they still claim to be serving the American people and still ask the confidence and support of the American people. No wonder that courageous and patriotic Democrats prefer honorable political death to such unspeakable degradation.

MAY MEAN WAR.

No nation ever added permanently to the peace of the world by cowardly and unjust surrender. The present law will create a feeling between the United States and Great Britain that will

grow more intense as the days go by. Every British vessel that goes through the canal will increase that irritation. Every time an American ship is required to stop and pay tolls it will add to the dissension. Every day that goes by the American people will become more impatient and resentful of this great wrong perpetrated upon them.

The present law will not be the end of the trouble; that will be just the beginning of the fight. The American people do not believe that the British demands are fair or just or entirely honest, and they are not going to surrender to them. Just as certain as the tides continue to ebb and flow, if Congress persists in conceding to British demands, just that certain is it going to lead to trouble. Let no one be misled in this matter. The American people own the canal; they have paid for it; they are responsible for it; and they are going to control it. The passage of this bill will delay, but it will not defeat, that purpose. The American people, if the present law is repealed, will demand an absolute abrogation of the Hay-Pauncefote treaty. It may lead to dissension and dispute and to serious consequence, but this will not turn the people from their purpose. Those who are to-day pleading the cause of Great Britain are not pleading for peace, but for war.

THE PRESIDENT'S ATTITUDE.

On the 5th of last March the President appeared before the Houses of Congress in joint session and pleaded for the repeal of the present law giving American ships in the coastwise trade the right to pass through the canal without the payment of tolls. That message consisted of just 13 sentences. In the last three and most important ones he said:

> We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity and for the redemption of every obligation without quibble or hesitation.
>
> I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

That is the most remarkable statement that was ever made by a President of the United States in a public document. It is remarkable in its declaration that we should do his will without raising the question whether we were "right or wrong." It is remarkable for the confession, "I do not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure." Congress was astonished and perplexed as these words came from the President. No explanation whatever was given of these "other matters of even greater delicacy and nearer consequence." No explanation of the facts were made. What these conditions were no one knew then and no one knows to-day.

Conceded that the President is a great man and his judgment has great weight, how much greater is he now than he was a little more than a year ago, when every Senator in his party upon roll call in the Senate that voted upon the proposition voted against the present attitude of the President? Who would have said a little more than a year ago that the judgment of Woodrow Wilson should outweigh that not only of any one man but of all men combined, and that that judgment should be accepted without question and regardless of whether we were acting "right or wrong"? A little over a year ago the judgment of Woodrow Wilson, the candidate, was squarely opposed to the judgment of President Wilson now.

Several months have gone by and none of the direful things predicted by him has happened. The people generally and Congress believed that there was some vigorous and threatening protest against this law being made by some foreign nation, and that the President could not, for policy's sake, give this information to the public. This is now demonstrated to be absolutely wrong. No other nation has made any objection to the law that he thought was vital to his foreign policy. Upon this fact there can be no question. Senator STONE is a Democrat and is chairman of the Committee on Foreign Affairs in the Senate. He is standing with the President upon this question. Yet, when speaking upon the floor of the Senate on May 5 last, Senator STONE said:

> No foreign Government is now asking us to repeal this law; no foreign Government has filed or presented any protest since its enactment.

No language could be plainer or more emphatic. No protests or objections have come from any foreign nation.

From whence came the influence that caused the President to so suddenly and emphatically reverse his attitude and yet refuse to give any reason for his actions? We do not know, but we do know that it must have come not from abroad but from home.

Was it the subtle influence of the great transcontinental railways that has caused the President to believe that international trouble lay ahead if we did not yield our position and permit the main benefits of the canal to go to other nations? We do not know.

Was it that the President was embarrassed by the brutal murder of Benton by the administration's pet assassin, the bloody-handed Villa, and wished to placate England? We do not know.

Was it that the President had seen an unfriendly shadow on the Pacific and in fear and dread was seeking to purchase British friendship? We do not know.

Was it to secure the influence of Great Britain in upholding our blundering Mexican policy? We do not know.

Was it that certain prominent men of that class of superior individuals, the "intellectually unintelligent," had persuaded the President that by rising above all selfish interests of his own country and taking this altruistic stand for all mankind that he would stand among the immortals? We do not know.

The President has insisted, and still insists, that his word be taken without explanation or question. He insists that his judgment shall stand unchallenged against the great majority of all the public men of all parties.

It may be said that the President could not perhaps well make public the real facts in a matter of this character. This may be true, but he could have communicated with the Senate and the House in executive session. If he were afraid of that procedure, he could have called into conference some of the leading men of both parties, and a word from them would have been accepted as justifying his course. If still fearful that he could not trust those of opposite political faith, he could have called in a few of the leading men of his own party, but even this he did not do. He trusted no man. He took no man into his confidence. Speaker CLARK, who in many respects occupies the second place in power and influence in this Nation, publicly stated that the President had given him no information as to the facts upon which he based his request. A word from Speaker CLARK would have given the President a solid vote in the House of Representatives and would have saved one of the most bitter political fights in the history of this country. It would have saved much criticism and much misunderstanding. The President owed this much to his party and to his friends, to say nothing of his duty to his country.

As the days go by, the American people with a feeling of sincere regret and humiliation are slowly being forced to the conclusion that the reason the President did not lay before Congress the facts upon which he based his action was because there were no facts to be given. More and more it is becoming the settled conviction of the American people that the dangerous condition to which the President alluded that so confounded him and filled him with dread and fear was at least very largely "psychological."

We do know that to follow the dictates of the President was in the interest of foreign countries and against the interests of our own country. We do know that to do his bidding was against the interests of the American people and in favor of the transcontinental railroads. To all these arguments and statements and to all requests by Congress for facts he has made but one reply—"Do as you are told."

The President can not complain whatever motive may be ascribed to him as influencing him in taking his present attitude. He can not complain if he is misrepresented. There is not now, and there never has been, any good reason why he should not tell the facts. Having failed to do this he should not complain if his motives are misunderstood.

Congress, cringing and cowardly, bowed to the will of the Executive. The power of patronage and the fear of political defeat has been irresistible to the majority of the Democratic Party. Only a few of the stronger, the real leaders of the Democratic Party, such as Speaker CLARK, UNDERWOOD, KITCHIN, DOREMUS, O'GORMAN, and CHAMBERLAIN were brave enough to stand against this force. All honor to these giants among men that prefer political deaths to such unspeakable degradation!

But I mistake greatly the temper of the American people if it be not the cowards instead of the brave that shall by public wrath be doomed to political oblivion.

They will stand helpless when the demand is made upon them to answer why they have surrendered their judgment, repudiated their platform, and betrayed their country's interests who can only answer, "He commanded it."

To those who have surrendered to the dictates of the President, "without raising the question whether we were right or wrong," I commend for their prayerful consideration the words uttered upon the floor of Congress by that consistent and peaceful patriot, William Jennings Bryan, when he exclaimed:

> To whom are we responsible? It is before the tribunal established by our constituencies, and before that tribunal only, that we must ap-

pear for judgment upon our actions here. When we each accepted a commission from 180,000 people we pledged ourselves to protect their rights from invasion and to reflect their wishes to the best of our ability, and we must stand defenseless before the bar if our only excuse is, "He recommended it."

THE EFFECT OF REPEAL ON THE PACIFIC COAST.

The Pacific coast will be more greatly injured by the repeal of the law giving American ships in the coastwise trade the right to pass through the Panama Canal free than any other part of the Nation. The Puget Sound country will be struck the heaviest blow of all. If this act of the present administration was to remain permanently upon the statute books, it would be absolutely fatal to the future greatness of Seattle. It would be the end of all our dreams of future commercial supremacy.

The repeal of the present law means an increase in the freight rates of $1.50 for every thousand feet of lumber sent from Seattle to the Atlantic coast through the canal. It means an increase of $1.50 in the freight rate on every thousand feet of lumber sent from Seattle to the Atlantic coast by rail. This $1.50 per thousand would start our mills running again at full capacity and bring a large measure of prosperity to the entire Puget Sound district.

Again, the repeal of the present law means that the P Sound shipper will have to pay $60 more for every carload of freight that he sends to the Atlantic coast; it means that every buyer in Seattle will have to pay $60 more on every carload of freight brought from the Atlantic coast; it means a like increase, in proportion to distance, in freight to all inland competitive points. The injury that this repeal will do to the prosperity and the development of the State of Washington no mind can measure.

But this increase in freight rates is not the only injury to Seattle nor the greatest danger. The really great markets that the Panama Canal will open up to the people of the Pacific coast is the eastern markets of our own country. The canal will be of little advantage to us in securing markets in other parts of the world. The British Columbia lumberman can charter a cheap foreign vessel to reach our eastern markets. The Washington lumberman can not. He can use only American vessels that have been built by American labor and are manned by sailors receiving by comparison high wages. This difference will be a handicap to the American lumberman so great that it can not be overcome. It will amount to approximately $2 per thousand feet. Every other American industry will be under a similar handicap. Our great markets of New York, Boston, Philadelphia, Baltimore, and other Atlantic cities will be largely taken from us by British Columbia.

Nor is this all. Vancouver is to become the great commercial city of the Pacific Northwest, and not Seattle, if American ships are to receive no advantage in the use of the Panama Canal. It would be a costly mistake for us in a spirit of misguided egotism or of local pride to deceive ourselves in this matter. The stubborn facts are against us. Trade knows little patriotism. Commerce is not largely controlled by sentiment.

Here is the situation: A builder in Spokane buys a thousand tons of structural steel from the east coast. If American ships could pass through the canal free, that steel would be brought to Seattle and then sent to Spokane, but if an American ship must pay the same as a foreign ship to pass through the canal that steel will be sent on a cheap foreign ship to Vancouver, and from Vancouver it will be sent to Spokane. Remember this can be done without the payment of a cent of duty. Again, the producer of eastern Washington, if he wishes to send his products to Atlantic Coast States, if the American ship has no advantage through the canal, will ship them to Vancouver—not to Seattle—and there they will go by a foreign cheap ship, with its foreign cheap crews, to its destination. These foreign cheap vessels can not come to Seattle, but the shipper, by going to Vancouver, can get every advantage of this foreign cheap tonnage. The freight rates between Spokane and Vancouver are exactly the same as the rates between Spokane and Seattle.

Many labor under the delusion that for a foreign ship coming with goods from an American port and taking these goods to a foreign port and then sending them back into this country by rail is either in violation of our navigation laws or that the goods would be subject to duty. Such is not the case. The trade between Spokane and New York through Vancouver, using a foreign vessel, is just as free as the trade between Spokane and New York through Seattle, using an American vessel. They are controlled by exactly the same rules and regulations.

The wayfaring man can see, must see, what the result will be. All the trade of the Pacific Northwest that will pass through the Panama Canal, except that along the water's edge of Puget Sound, will pass through Vancouver. Vancouver will be the place where rail and water traffic will meet. Vancouver, and not Seattle, will be the great commercial city of the North Pacific.

I have been criticized by some because of the severity of my denunciation of the repeal of the law favoring American ships. I admit the intensity of my feelings in this matter. I admit that I have a feeling of bitterness and resentment when I see my own country injured and ruined and the great benefit that is justly ours taken from us and given to British Columbia and to the transcontinental railroads because of the unsubstantial fears of a scholarly dreamer or to cover up our unparalleled blundering and stupidity in Mexico. I think the price is too great to pay for "watchful waiting" or for railroad influence or for British friendship.

For years we have waited and hoped and planned for the day when the Panama Canal would be completed. We confidently believed that this day would mark the beginning of our greatest prosperity. We believed that this day would assure the commercial supremacy of Seattle. But our dreams are shattered; our prospects are gone.

The Democratic Party alone is to blame. By false pretenses they have put us in the position in which we are to-day. We believed we could rely upon the Democratic Party when it solemnly wrote its promise into its national platform. We believed we could rely upon what Woodrow Wilson said when he was a candidate and seeking votes. We believed that we could rely upon the public promises made by William Jennings Bryan. We believed that we could rely upon the record that the Democratic Party had made in Congress. We believed that we could rely upon the pledges and promises made by the Democratic Members of the United States Senate and the House of Representatives. We believed that we could rely upon the assurances of various Democratic candidates throughout the Nation when they were seeking reelection. We did rely upon these promises. We did rely upon the assurances of the Democratic Party and its representatives. The people of the Pacific coast, believing these promises, spent millions of dollars in preparing for the opening of the Panama Canal and have contracted to spend many million dollars more. The Democratic Party has deceived, betrayed, and robbed the people of the Pacific coast. The attitude of this administration would indeed be the end of all our hopes, our prosperity would have received a deathblow, but for the fact that the people will at the first opportunity drive the Democratic Party from power. It brought ruin and poverty to its own country and rejoicing and prosperity only to our foreign competitors.

The fight has not ended. It is just begun. If the Republican Party carries the next Congress, as they probably will, I believe that they will immediately pass a bill exempting American shipping from the payment of tolls. If the Republican Party elects the next President, as it certainly will, I believe that it will at once write upon the statute books a law that will give every American ship the right to pass through the canal absolutely free. To this end and to this purpose I will strive and fight every day, until it is realized, as long as I remain in Congress.

In the success of the Republican Party lies the only hope of the Puget Sound country. Our future prosperity depends, as does that of the entire country, upon the success of that party. The Democratic Party has repudiated its platform, broken every pledge, been false to every promise and betrayed every trust, demonstrated its utter incapacity, discredited and humiliated us abroad, and brought disaster, uncertainty, depression, and poverty at home. It has learned nothing. It has forgotten nothing. It is still the Democratic Party.

THE LARGER QUESTION.

The Democratic Party in its platform, in the most emphatic and solemn manner, declared its position upon one of the greatest questions that has ever come before the American people—the right of this Government to control the canal that it owned and had constructed. The American people believed that promise, as they had a right to believe it. Under that promise the Democratic Party came into power. Through party alone is the only way yet known under our form of government whereby the people can express their will.

No one can certainly say that the Democratic Party would have succeeded in the last campaign if it had been known that it was going to reverse its position upon the Panama Canal question. If the Democratic Party can now repudiate the promises of their platform and the promises of their candidates who were elected upon that platform and live, then our form of government is a failure. If a party is not bound by its platform, or by the promises of candidates, then that is the end of political honesty. If there is no way that the people can know what a political party will do when they place it in power, then our

form of government is no longer one controlled by the people. This action of the Democratic Party places popular government on trial; it strikes at the very foundation of our institutions. If there is no party regard for promises made to get votes, if there is no party honesty, if there is no party integrity, if party promises and party pledges are made only to be repudiated and to secure power, then republican government must end. This is not a question of keeping faith with the other nations of the world; it is a question of far greater import—of keeping faith with the American people.

Stop the War—Prepare the Way for Italo-American Mediation—Union of White Race and Universal Peace.

EXTENSION OF REMARKS
OF
HON. FRANK O. SMITH,
OF MARYLAND.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 24, 1914.

On House joint resolution 373, introduced by Mr. SMITH of Maryland October 16, 1914.

"Whereas American mediation in the present war should be offered as soon as there is a fair prospect of its being accepted, and meantime every effort should be made to prepare the way for successful mediation; and

"Whereas the war is due to the uncompromising attitude of European nations on certain burning questions which divide them; and

"Whereas these questions can only be settled by mutual concessions on the principle of 'Do unto others as you would they should do unto you'; and

"Whereas the most persuasive and most inoffensive way to advocate mutual concessions is by example; and

"Whereas our mediation will become a mere formality unless we prove that we ourselves are willing to make concessions, to 'do unto others as we would they should do unto us'; and

"Whereas the narrow coast strip of southeastern Alaska, shutting off one-third of western Canada from free access to the Pacific, has for years been a source of irritation to the Canadians and is bound to become more and more irritating as population and commerce increase in the country behind it; and

"Whereas this situation bears a close resemblance to the burning questions which have caused the present war; and

"Whereas a unique opportunity is thus presented to the United States to set before the eyes of the world the shining example of a model concession to Canada and thus to prove the sincerity and earnestness of our mediation, to make it more effective and impressive and a source of immortal honor to our country: Therefore be it

"*Resolved, etc.*, That the President be, and he is hereby, requested to make an offer to the British and Canadian Governments to negotiate in regard to the transfer of southeastern Alaska to Canada by sale or exchange, or both."

Mr. SMITH of Maryland. Mr. Speaker, I wish to say a word regarding House joint resolution No. 373, requesting the President to make an offer to the British and Canadian Governments to negotiate regarding the transfer of southeastern Alaska to Canada by sale or exchange, or both. The purpose of the resolution, as stated in the preamble, is to set an example in the policy of mutual concessions between nations and thus to prepare the way for quick and effective mediation in the present war. The idea is to draw the beam out of our own eye, in the hope that our brothers in Europe may thereby be made to perceive the advantage of drawing the motes out of their eyes. Of course, we can not negotiate on the subject of Alaska while the war is going on; we can only offer to negotiate. The negotiation itself will have to be postponed till after the war.

THE ELOQUENCE OF CANNON.

You are aware that a resolution of this nature was introduced four times during the past two years—twice by Mr. STEPHENS of Texas and twice by myself. As explained by me in the CONGRESSIONAL RECORD of November 7 last, the resolution was intended to serve as an entering wedge to remove the causes that have led to this dreadful war. The few comments that were made indicated that neither the press nor the Members of Congress were at that time disposed to treat the matter seriously. Now that our minds have been awakened by the thunder of a thousand cannon, it is to be hoped that a renewed effort may aid at least in shortening the war. Hindsight, while generally clearer than foresight, is a good deal less useful, but still it is better than no sight.

OUR OWN FATE IS AT STAKE.

In ordinary times it is notoriously difficult to gain the public ear for a proposition which constitutes a new departure. But we are not living in ordinary times. We can not afford to be dozing now or to give a random, snapshot answer, when our answer may determine our safety or our ruin. The war which is now raging threatens to become the greatest calamity that ever befell not only Europe but also America. We must stop it at any cost, and if there is any means at our disposal that may strengthen our hands for that effort we must use it, not only for the sake of humanity, but principally to save our own skins.

UNION OF THE WHITE RACE OUR ONLY HOPE.

Why must we stop this war? Because the people who are killing and ruining each other are those on whom we have to rely for aid in the approaching struggle with Asia. Their resources are our resources, and in wasting them they are wasting our means of defense. In Asia there are 800,000,000 people, who demand the privilege of admission to all lands of the globe. These 800,000,000 are not united now, but their common demand for the privilege of admission is sure to unite them before long. For that matter, more than half of them are already united. It would be an idle boast, "the valor of ignorance," to say that we could resist 800,000,000 when they are armed at the same rate as Japan. The entire strength of the united white race will be needed to cope with this danger. Our foremost duty to ourselves, therefore, if we wish this Nation to remain a white Nation and to maintain the ideals of white civilization, is to work for the union of the white race. Our first line of defense is not on the Pacific coast, but on the frontiers of India and Siberia.

IF BRITAIN LOSES INDIA, WHITE SUPREMACY CEASES.

You can readily see what will happen if this sickening war is protracted. It must speedily reduce our prospective allies to a state of exhaustion. It is supposed to cost something like $50,000,000 a day. Germany is reported to be putting 6,000,000 soldiers in the field, 1 out of 11 of her population, leaving only the women, children, old men, and invalids at home. The other nations are doing approximately the same. What is to become of their industries, which are the source of their strength—that is to say, the source of our strength? At any moment we may expect the news of a life-and-death struggle between the British and German Navies, which will most likely cripple both. If the remnant of the British Navy is thereupon forced to confine itself to home waters, to protect the commerce upon which Britain depends for food, who will patrol the Indian Ocean and prevent unscrupulous dealers, yellow and white, from smuggling firearms into India? And when the 315,000,000 natives of India have got possession of, say, half a million rifles, perhaps a few cannon, how long will the 75,000 white troops be able to maintain the British rule? If Britain loses India, she can never regain it in the enfeebled condition in which a protracted European war would leave her. India, made rich by Britain, blest by her with peace for the first time in history, endowed by her with railways, canals, telegraphs, and great educational institutions, will at once join her force to that of the Mongolians, not only in ousting the white man from Asia but in demanding free access to all lands, especially the lands of high wages—Australia, New Zealand, Canada, and the United States. France will lose Indo-China, Holland will lose her East Indian possessions, Russia will lose Siberia, and then the united Asiatics will number not eight hundred but one thousand millions, able to build ten war ships to every one of ours. In a word, we must stop this war at all costs, and at once; and if it requires extraordinary measures, we must wake up and use them. The feeling between our parent nations in Europe is even now too bitter to admit of their early union; we must not allow it to become still further embittered by additional mutual injury; we must, if possible, show them how the bitterness may be allayed. An excess of lemon juice calls for an extra quantity of sugar.

AMERICAN NEUTRALITY.

It is idle at this moment to inquire who is responsible for this catastrophe. We can not look behind the diplomatic curtain. When all the facts are known, if they ever become known, they will most likely be found totally different from what is now rashly surmised. Such being the case, it is foolish on the part of Americans to take sides one way or another, to lay the blame on this or that nation. It is worse than foolish, it is pernicious, for it renders our mediation more difficult. Our vital interests require us to offer that mediation as soon as there is the slightest prospect of success, and meantime to use every means to predispose the warring nations to accept mediation.

THE DEVILISH WORK OF THE AUTOMATIC NO-SAYERS.

That is the purpose of my resolution—to prepare the way for early and effective mediation. You are, of course, aware that this war is not the outcome of a sudden burst of rage, but represents the explosion of forces which have for years been accumulating under pressure. The cause of this pressure is well known; it is the iron shirt of habit, the inertia of accomplished facts, the obstinacy inherent in those unwieldly human conglomerates called nations, which causes them to refuse to

make the slightest concession to the demand of a neighboring nation, even when that demand is most reasonable and equitable. Nations professing to be Christian have refused to obey the fundamental law of Christianity: "Do unto others as you would they should do unto you." A number of burning questions, dividing the nations of Europe, have been allowed to remain unquenched, till they have burst into a general conflagration. No matter how peace is made, it will not be secure unless the nations are willing to make mutual concessions in regard to these burning questions. We are told that this war was inevitable. That is a quotation from the dictionary of superstition.

The war could easily have been avoided if a few prominent men had had the courage to brave the sneers and insults of the rowdies and fling themselves resolutely into the fray in behalf of these mutual concessions. Physical courage seems to be plentiful as mud; moral courage, rare as gold. We wish to see a permanent settlement, as the indispensable condition of that union of the white race on which depends our hope of future safety. We can not tell the European nations what mutual concessions they should make, for we can not afford to pose as instructors, presuming, at a distance of 3,000 miles, to solve problems in which we have never been practically concerned. But we can do something far better; we can preach the doctrine of mutual concessions by example, and thus furnish palpable proof of the sincerity and earnestness of our mediation. Actions speak louder than words. If we wish to exhort other people to be reasonable, we must first be reasonable ourselves.

PEOPLE WHO LIVE IN GLASS HOUSES.

Let us confess that we, too, have been unreasonable toward one of our neighbors—Canada. We, too, have allowed our mental machinery to be clogged by the inertia of a wrongly accomplished fact; we, too, have not been energetic enough to unbutton the iron shirt of habit. We have been deaf to the complaints of the Canadians, just as European nations have been deaf to one another's complaints. The question of the Alaska Panhandle is a burning question to Canada, although we have ignored it. Any one that has eyes in his head can see at a glance what a nuisance it must be to a young and vigorous nation to have one-third of her western provinces and territories shut off from free access to the Pacific by a coast strip 536 miles long in a straight line and in some places only 8 miles wide. In a few years the country behind that coast strip will have several hundred thousand inhabitants. Settlers are now pouring in at the rate of 40,000 a year, about half of them being Americans.

Their commerce will naturally seek the nearest outlet to the sea. Imagine their feelings, even of the American settlers, when they find that they can not get their goods to and from the sea except by passing them in bond through a barbed-wire fence of customhouses strung along a zigzag line for 760 miles, almost everywhere in sight of the sea. What would be our feelings if a Canadian panhandle 536 miles long, 8 to 20 miles wide, stretched from eastern Maine down to Atlantic City, if all the ports on that coast, Portland, Boston, Providence, Newport, New York, Jersey City, were Canadian cities, deriving their wealth from the American country behind them, yet contributing not a cent toward American taxes, if not a pound of freight could be sent from the interior to the sea for export, except in bond? What would be the feelings of the people of Augusta, Me., or Worcester, Mass., on reading in some Canadian paper this brilliant advice: If you do not like to cross Canadian territory to get to the sea, all you have to do is to go to Philadelphia! That advice was actually given to the Canadians by an American paper: If the people of Yukon Territory and northern British Columbia do not like to cross American territory to get to the sea, all they have to do is to go to Prince Rupert. How brilliant! How gentlemanly! We, too, profess to be a Christian nation, yet we, too, have refused to obey the fundamental rule of Christianity, which, for that matter, is also the fundamental law in the gentleman's code—do unto others as you would they should do unto you.

THE BEAM IN OUR OWN EYE.

If I dared specify some of the burning questions that have brought about the present war, you would see at once that they are exactly of the same nature as this burning question between us and Canada. This question has been urged on the attention of the American public for nearly five years, but has not hitherto been treated seriously, for the reason, perhaps, that moral courage is not much more plentiful in this country than in Europe. Everybody admitted that the Alaska Panhandle is a nuisance to the Canadians, but the usual comment was that "the United States is not in the selling or swapping business." That, of course, is no argument at all, but simply a display of the iron shirt of habit, an outcrop of the same unholy, pernicious, brutal spirit of obstinacy and thick-skinned callousness that has opposed all mutual concessions among European nations or even the mere discussion of these concessions, and has thus brought about the present dreadful catastrophe. The dominant note in the American press at this moment is one of breathless astonishment that 10,000,000 men should be shooting at each other for no earthly reason that the average American mind can discover. How did it come about? Let me tell you how it came about. To all their neighbors' pleadings for concessions the European nations have steadily replied, year after year: "No! We are not in the selling or swapping business, and we don't propose to discuss the subject." That is exactly the reply which some of our brilliant fellow citizens make to the suggestion of a concession to Canada. If, in offering mediation, we wish to approach our excited brothers with a clear conscience, if we wish to advocate by example those mutual concessions which we dare not openly specify, for fear of seeming presumptuous, we can not refuse to make this model concession to Canada, which we would have made long ago if we had given the matter serious thought, if we had not been too busy with other things. We should be guilty of a piece of glaring and brazen hypocrisy if, while entreating our brothers to be reasonable toward their neighbors, we refused to be reasonable toward our neighbor. No one ever suggested that we donate this panhandle to Canada; the only thing proposed was that we exchange it for an equivalent. Very likely we can get something for it that would be far more useful to us. The thrifty men in this country are decidedly in the selling and swapping business whenever they find that they can thereby add to their possessions. If you had a chance to buy a gold watch for a dollar, you would be a fool if you hesitated to surrender your dollar. The following equivalents for the Panhandle have been suggested:

POSSIBLE EQUIVALENTS FOR ALASKA PANHANDLE.

First. A sum of money. A Canadian capitalist is said to have remarked that "if Uncle Sam will let us have this panhandle for $50,000,000, we can raise the money right here in Vancouver." Fifty million dollars would be a magnificent endowment for a national university.

Second. British Honduras, which might be offered to Mexico in exchange for Lower California, including the important naval base of Magdalena Bay, and enough of Sonora to give Arizona a port on the Gulf of California.

Third. A strip of Yukon Territory to enable us to build a much-needed all-American railway from Haines to Kennicott Mines and Tanana River, Alaska, which would not be blocked by snow in winter.

Fourth. The repeal of the Hay-Pauncefote treaty; that is to say, absolute control of the Panama Canal. Even those of our citizens who say that we have absolute control now would doubtless be glad to have it in black and white.

Fifth. The immediate construction of a railway connecting the United States with Alaska. The strategic importance of such a railway was pointed out by Representative ALBERT JOHNSON in the CONGRESSIONAL RECORD of September 10, 1913. As you are aware, Sir Richard McBride, prime minister of British Columbia, expressed the opinion that the transportation of American troops over that railway in case of necessity might be arranged for by treaty. In this way the railway would protect not only Alaska but our entire Pacific coast. Branches would, of course, be built from the main line to all the ports of the panhandle, causing these ports to develop in a few years into important cities, which would mean a fortune to every owner of real estate in those ports.

ALL GAIN AND NO LOSS.

At the same time we should lose nothing, for we could doubtless retain every advantage we now enjoy through the possession of the panhandle. On this point a member of the Canadian Parliament is reported to have made this statement:

> If you are willing to let us have this piece of land, you can name any conditions, and we will agree to everything. If you wish free trade with the panhandle for a certain number of years, we will let you have it as long as you like. If you wish preferential treatment for your citizens in the matter of franchises and concessions in the panhandle, we will agree to that. Of course, all American citizens residing in the panhandle will have the option of retaining their American citizenship.

But this is a matter which need not be discussed now. The all-important object to-day is to stop the war as soon as possible; to make our mediation effective; to take away every possible ground for the suspicion that it is a mere formality. Actions speak louder than words.

WHAT WOULD A GENTLEMAN DO?

One brilliant remark sometimes made on this subject is this: "If the Canadians want this Panhandle, it is their business to come to us and ask for it." Doubtless the people who talk that

way would be highly offended if some one questioned whether they were gentlemen; yet if they reflected a moment they would perceive that they are advocating the very thing which the gentleman scrupulously avoids. Knowing how unpleasant it is to be forced to complain, the gentleman does not wait till his neighbor is reduced to that extremity. As soon as he perceives that he is subjecting his neighbor to a nuisance which can be removed without inconvenience to anyone, he goes to him and apologizes for his thoughtlessness in having allowed the nuisance to continue so long. We are gathered here to look after the rights of our fellow citizens. Their foremost right is the right to be ladies and gentlemen not only individually but collectively. To assume that the American people would prefer to wait till Canada complains would be a mortal insult, for it would be equivalent to saying that our fellow citizens are not ladies and gentlemen. The only reason why they have not yet made the model concession to Canada is because the matter has not been sufficiently brought to their attention.

THE MAGIC OF EXAMPLE.

Imagine the impression which the offer of the Alaskan Panhandle would make in Canada and Britain. These are the very countries where our mediation is most likely to be welcomed and to find the strongest support. They will welcome it with tenfold eagerness and consider it with tenfold attention when it is preluded by such a concession, giving tangible proof of our earnestness and an example in the policy of settling international disputes on the basis of the gentleman's code. Britain engaged in this war with the utmost reluctance. Though she must of course fight with all her might so long as she is in, she would like nothing better than to be out. She knows that victory would be almost as disastrous to her as defeat, for when Germany is prostrate neither Britain nor France will have any force to oppose to Russia's dictation, except by imploring Japan to help them and paying her a good price, Manchuria surely, and possibly eastern Siberia, or by begging Germany's forgiveness and asking her to spend her remaining strength in behalf of those that crushed her. Numerous voices in Britain are asking whether it is good policy to kill your best friend first and then to resurrect him. Moreover, Britain knows that her slender garrisons in India, Egypt, and South Africa are sitting on volcanoes, the caps of which may be blown off at any moment. She knows that she could not reinforce these garrisons if her main force were facing huge armies on European battlefields and if her navy by that time were crippled. Lord Kitchener has been in India, Egypt, and South Africa. He knows how deep is the discontent in those three countries and how instantly the white garrisons and the white colonists would be massacred if ever the natives got the idea that the Motherland could send no help. For that very reason it is highly improbable that Britain will send more than 200,000 men against the Germans.

ITALO-AMERICAN MEDIATION.

If Italy maintains her neutrality and thus keeps her military strength intact while the fighting nations are wasting theirs, a day will soon come when Italy and the United States can jointly offer their mediation. Italy and Britain combined will then be practically in a position to compel the combatants to agree to a conference. If meantime we place before the eyes of the world the shining example of a model concession to Canada, there is good reason to hope that the parties to the conference may be willing to make those mutual concessions that are needed to give permanence to the work of the conference and thus prepare the way for that union of the white race which is our only chance of salvation. Would not our permanent security be an ample equivalent for the Alaska Panhandle?

MAKE THE OFFER NOW; NEGOTIATE LATER.

As already noted, the negotiations regarding the panhandle could not be well conducted while the war is going on. They will have to be postponed till peace is restored. All that is needed now is that we make the offer; that we show our willingness to negotiate on this subject. That offer in itself will constitute the model concession. Our brothers in Europe will be more willing to draw the motes from their eyes when they see us preparing to draw the beam from our own eye. Actions speak louder than words. If we intend to ask our kindred to be reasonable, we must make up our minds to be reasonable ourselves.

DELAY MIGHT BE FATAL.

Our mediation ought to be offered at the earliest possible moment, as soon as there is the slightest prospect of success, for, as I said, we can not afford to let our white kindred, our natural allies, ruin each other; we can not afford to let them waste the resources which are ours as well as theirs, for they constitute the silent reserve whose mere existence affords us the best protection against Asia. Their cannon are our cannon, their battleships are our battleships, their money is our money. We can not afford to sit idle while France is devastated, stricken with paralysis from which she could not recover for many years, leaving French Indo-China an easy prey to the Mongolians. We can not afford to wait till Kiaochau is taken and another blow dealt to the prestige of the white race. We are told that this war will not end till one side is prostrated. That would be a disaster to us, and it would be a disaster to the victors, for the cost of the victory would immeasurably exceed the value of any advantage they might derive from it. Some people seem to take pleasure in the thought that the strongest white nation, the most highly educated nation, is to be crushed by a combination of other white nations. That would be the most atrocious form of race suicide. From all accounts it seems that neither side wanted war, but that they blundered into it from mutual suspicion and bluff, just as we blundered into our Civil War. If neither side wanted war, why should it continue?

ANGLO-GERMAN FRATRICIDE.

In particular we have the most urgent motive to see Britain extricated from this horrible and unnatural fight against her white kindred, the world's schoolmasters, whose universities are the Meccas of all students, especially Russians. You know how horrible it seemed to us during our Civil War to be forced to fire at our own fellow citizens. I am sure every British soldier has somewhat the same feeling when firing at German soldiers, defenders of the land which was the original home of Englishmen and Anglo-Americans, the land which for hundreds of years has been England's constant ally, and with which she has never before been at war. It is nauseating to hear the German armies referred to as "hordes," when everybody knows that there is not an illiterate among them, which is more than can be said of their opponents. Some phrase maker the other day called Germany "a menace to civilization." How can the mainspring of the watch be a menace to the watch? All the dispatches are filled with accounts of the incredible bravery of the German soldiers. It seems to me that every Englishman must by this time be proud to think that he is a kinsman of these brave people. Many an Englishman must be saying to himself, "Can it be that the cause which inspires such devotion is a bad cause? Would these highly intelligent people fight so heroically if their aim were mere wanton aggression? Are they not perhaps sincere in saying that they are simply fighting for independence, and not merely for their own, but also for England's independence? Can it be that England is making war on her best friend? Would it be an honor for England to take part in crushing such a brave nation, the land of books, the land of universities, England's own mother? Is it not an everlasting pity that this magnificent courage is displayed against England instead of for her? What could be better for England than an alliance with this marvelously efficient nation? After all, neither England, nor any nation would hesitate to disregard a scrap of paper if she saw no other means of escape from ruin. In 1807, in a far less desperate situation, England did not hesitate to attack Denmark, a neutral nation, without warning, to bombard Copenhagen, and carry off the Danish fleet."

INTERNATIONAL EXECUTIVE POWER.

An Anglo-American alliance, which has long been urged by many earnest people on both sides, is impossible in the face of the solid opposition of the German-Americans. Now, it seemed highly probable only four months ago that Britain and Germany would form an alliance. That would have led almost inevitably to the Anglo-American alliance, the virtual reunion of the two fragments of the English-speaking nation. The German-Americans would have been foremost in demanding it as their only means of reunion with the Fatherland, lending to it the immense advantage of American support. A compromise between France and Germany would have followed—some of the wisest and most prominent people in Britain were working for it with might and main as the essential condition of a durable Anglo-German understanding—and thus the four most enlightened nations—Britain, France, Germany, and the United States—would have been combined into that international executive power advocated both by Mr. Carnegie and by Col. Roosevelt, a power strong enough to keep the globe at peace forever; for, once united, the four nations would be kept forever united by the immense advantage of union. One-tenth of their present armaments would suffice to accomplish this object, and no nation would welcome that reduction of military expenditure more eagerly than Germany. In fact, it seems impossible to imagine how eternal peace could be secured in any other way than through an international executive power consisting of the four freest, strongest, most enlightened nations. That dream has been shattered for the present, but who would have the heart to

say that it has been shattered forever? If we can revive it by means of the proposed concession to Canada, would not that achievement alone be worth a thousand Panhandles? As for Anglo-American reunion, its advocates ought to see that the German-Americans will become its inexorable opponents if Germany is crushed by Britain's aid.

FIGHT YOUR ENEMIES, NOT YOUR FRIENDS.

Britain can not withdraw from the war except by bringing it to a close, but we know that she would like nothing better than to bring it to an honorable close at once, without further bloodshed, and that she would be eternally grateful to us for any assistance we could lend her in that effort. It is essential to us that Britain should be free once more to employ her full force for the protection of her colonies, for Britain's danger in India is our danger. It is equally essential to us that Russia should not exhaust her strength in the gruesome and not very promising effort to crush her white brothers, her own teachers, the land of universities, but that she should concentrate all her powers on her essential task, to strengthen the frontier of Siberia, our own first line of defense.

THE FICTION OF GERMAN MILITARISM.

We are told that Germany will not accept mediation unless she is either completely crushed or completely victorious, and that in the latter case her demands will be exorbitant. I believe, on the contrary, that Germany, even if completely victorious, will surprise the world by her moderation. All she asks is "a place in the sun," a permanent position abreast, not ahead, of the other great nations. Her "grasping" character is best illustrated by the fact that she has only 1.7 square miles of colonial land to every 100 souls of her home population, while Russia has 10 square miles; France, 12; Belgium, 12; Holland, 13; Spain, 26; Britain, 37; Portugal, 69, counting both present and former colonies. Who has done the grasping? The bigger the beam in a man's eye the more he seems to be shocked at the mote in his brother's eye.

Evidently if Germany does not acquire additional colonies, she can not remain a great power. She will soon be at the mercy of her neighbors. This is ample explanation of her so-called militarism, which, if you will calmly consider it, is simply imposed on her by the inexorable necessity of self-defense. All you have to do is to open a book on statistics and you will find that Germany's expenditure for war preparation is a good deal less, all things considered, than that of the other great nations. Her military efficiency is simply part of her all-around efficiency. Why should a nation be punished for being efficient? The mythical character of the prevalent belief in German militarism is strikingly illustrated by a letter signed "E. G. S." in the New York Evening Post of September 7:

KRIEGSHERR NOT WAR LORD.

The phrase in traditional German "Der oberste Kriegsherr" is ancient, much older than William I or Frederick the Great, for that matter. Every sovereign and autonomous state has an "oberster Kriegsherr," as George V in England, Nicholas II in Russia, or Woodrow Wilson in these our United States. The term means merely "chief commander of the forces.' The superlative in the adjective is not absolute, of course, but relative; in the given country all of it a current and proper expression. But some 20 years ago, not so very long after the accession of the present Emperor of Germany, some smart aleck conceived it would be supremely funny and grotesque to take the "oberster Kriegsherr," dress it up in a literal extravaganza version, and so bestow upon our generation the "supreme war lord," which has been a mighty ally for all those who detested "Prussian militarism," so called. The injury which this winged word, caricature though it be, has done to the peace of the world and as a means to unbalance the sentiments of millions ignorant of the German idiom is simply ineffable.

According to the immortal Barnum, the American people like to be humbugged. A great many of them have once more been humbugged to their hearts' content by a phrase.

THE ELITE HAS THE BEST RIGHT TO EXPAND.

A member of the Canadian Parliament recently said: "The German farms in Pennsylvania are the finest in the United States, and the German farms in Ontario are the finest in Canada." It does seem cruel that the country which furnishes the best colonists should have practically no colonies of its own (home land 208,780 square miles, colonies 1,128,640 square miles), but be compelled to send its emigrants to foreign countries to strengthen them in the competition with the Fatherland. Her neighbors tell her that she ought to be resigned to the decree of fate; that she has come too late, because there are no more lands to be occupied; yet even while preaching this gospel of resignation they continue to add extensive areas to their already overgrown colonial empires. Shall the land of universities be called "grasping, arrogant, impudent, overbearing" because she tries to glean the few crumbs left after the banquet?

If it be true that there exists a compact among certain nations to prevent Germany from gleaning these crumbs, it would be an atrocious piece of ingratitude on the part of the pupils toward the teacher, a crime against eugenics. Our own consuls, as well as the British consuls, tell us that Tsingtau, which the Japanese are now trying to take away from Germany, has under German rule become the model city of the Far East, the favorite resort of Britons and Americans, a blessing to the natives far and wide. All students of municipal institutions go to the German cities as the classic models, where neither graft, nor bossism, nor rings exist, but everything is clean, honest, scientific, efficient, up to date. Can you imagine anything more preposterous, more heinous, more insane than that the very people who are trying to imitate these institutions should band together to prevent the expansion of the system which produces such institutions, nay, to crush that system in its own home? The essential agency in human progress has been the consolidation of small tribes into great nations, able to concentrate their force on the achievement of common objects. What would this country be if instead of one great nation it contained 48 little nations? What would the various parts of the British Empire be if they were independent? What would France be if Normandy, Brittany, Burgundy, Provence were separate nations? Nothing could be more conducive to human progress than the consolidation of the remaining small nations of the Old World into a great empire, under the leadership of the most highly educated, most scientific, most laborious, most systematic nation, with local home rule, of course. The so-called "sacred independence" of small States, the pet kitten of the phrase makers, is nothing but a relic of barbarism, which can not resist the stream of evolution. It is a platitude to say that technical rights often stand in the way of moral rights, and thus become the seeds of cataclysms.

TAXATION WITHOUT REPRESENTATION.

The interests of the entire white race, in the struggle to maintain its supremacy, clearly require that the power of the strongest white nation be enlisted to its fullest extent by allowing her to acquire an adequate stake in the patrimony to be defended; and if there is nothing left but the Near East, the interests of the white race clearly require that the protectorate of the Near East be conceded to Germany. In fact, what could be better for any backward country than to be taken under the guardianship of Germany and benefit by her administration, confessedly the most efficient in the world? Some people have been virtually saying to Germany: "It is your duty as a white nation to join us in defending our possessions, but we can not allow you to acquire any possessions of your own, because we intend to take everything ourselves. You are the strongest nation now, but we intend to keep you from growing, while we continue growing ourselves till we have you at our mercy. It is your duty to send your soldiers, if necessary, to fight for Russia in Manchuria, for Britain in India, but all the fruits of your exertions are to be ours, and you shall have no reward except the satisfaction of having done your duty." In other words, the world's teacher is to be the unpaid drudge of her pupils; the nation best qualified to have a voice in shaping the world's destiny is told that she must confine herself to humble requests. If Germany is afflicted with "militarism," as the phrase makers would have us believe, has she not ample motive for it? The logical way to "crush" that militarism is to remove its cause; to allow Germany to acquire enough land to assure her future as a great power. In Germany, as in all countries, there are, of course, plenty of fire eaters, who want armaments simply for the purpose of intimidation and aggression; but they would quickly be silenced by the sober sense of the taxpayers when these find that they are no longer compelled to put their hands in their pockets in order to assure their country's future. German militarism is simply a part of European militarism, which is the necessary consequence of the ungentlemanly, un-Christian, inhuman doctrine of "No concessions!" If we wish to see that militarism crushed, let us set the example in the policy of mutual concessions.

THE OTHER GREAT NATIONS HAVE ENOUGH LAND.

Now, Czar Nicholas I declared more than 50 years ago that "Russia has enough land; she does not care to acquire more, but only to develop what she has." That statement would seem to be even more correct to-day, when Russia owns 9,783,586 square miles (including last year's acquisition, the 912,000 square miles of outer Mongolia), assuring her position as a great power forever, if she will but do her share in uniting the white race and in strengthening the frontier of Siberia. The United States owns only 3,743,318 square miles, yet President Wilson was right in saying that no responsible person in this

country wants to acquire another inch of territory, for, although our area is but little more than one-third that of Russia, we, too, feel our position as a great power forever secure—if we can keep this country white. Last year Mr. Asquith proclaimed a similar self-denying ordinance for the British Empire (area, 13,220,000 square miles), and he hinted in fairly plain terms that Germany is welcome to take any land that may still be in need of a strong civilized master. In return for that declaration Germany had practically agreed to a limitation of armaments on the basis of British naval supremacy, and British public opinion was beginning to give credence to the ceaseless assurances of German statesmen that Germany never dreamed either of invading Britain or annexing the smallest British colony. As a result of these mutual explanations and concessions an Anglo-German alliance seemed imminent only four months ago. So close were we to eternal peace! It is a sad commentary on human nature that two nations which only four months ago were tossing compliments to and fro should now be spitting venom at each other. One of the minor evils of war is that it opens every foul mouth and closes many a clean mouth.

GERMAN VERSION OF CATASTROPHE.

At this point it may be well, in the interest of impartiality, to quote the German account of the origin of the war. Commenting on the recent Russian slogan "The way to Constantinople passes through Berlin," the Germans allege that the real cause of the Russian mobilization was the rapid drift of Britain and Germany toward an alliance, and the efforts made by British statesmen to bring about a compromise between France and Germany, which would have isolated Russia, blocked her path to world dominion, and, in particular, balked her millennial ambition to own Constantinople—a Greek city, 300 miles from Russia, the occupation of which would necessarily involve the annexation of Roumania, Bulgaria, and Asia Minor, perhaps Servia and Greece, and would place both Germany and Britain at the mercy of Russia. To avoid such a check, which would have disgraced the Russian Government in the eyes of its subjects and thus have afforded the revolutionists their long-desired opportunity, prompt action was necessary before Britain and Germany were fully cured of their mutual distrust. Having to choose between revolution on the one hand and new popularity and world dominion on the other, the Czar and his advisers chose the latter and mobilized, expecting, most likely, to achieve their object without war, simply through the exhibition of overwhelming force, soon to become still more overwhelming through the virtual annexation of the Balkan Peninsula. They probably calculated that Germany, even though aware that her future as a great nation was at stake, could not expose her immense industrial and commercial interests to the shock of war, and hence would not dare make good her protest without Britain's support, which, it was correctly surmised, Britain would not be ready to lend, through fear of breaking up the laboriously constructed triple entente before the ripening Anglo-German alliance had developed into a dependable fact. The Germans seem to have taken it for granted that in this matter Britain would necessarily side with them or at least remain neutral while they pulled her chestnuts out of the fire, and they can not understand why she should punish them for defending her vital interests. Whether this intricate web of motives had any real existence or is the product of the German imagination, it is, of course, impossible to say; but in view of the general tendency to lay the blame on Germany, it seems a matter of simple justice to listen to her excuse.

ANGLO-GERMAN ALLIANCE—THE KAISER'S HOBBY.

At any rate the whole world knows that union with Britain, as the prelude to European union, to ward off the yellow peril, has been the Kaiser's constant theme for 20 years, ever since he wrote: "Völker Europas, wahret eure höchsten Güter!" Not long ago he said: "The day may come when Britain will be glad that Germany has a navy, when they fight side by side in the great questions of the future." I believe that he is as ready to-day as he was four months ago to enter into that most natural, God-ordained alliance with Britain, which, as the first step toward the union of the four great free nations, would at once bestow eternal peace on the world.

BRITAIN THE UMPIRE.

Britain has now the same magnificent opportunity by which she profited so wisely and so brilliantly in 1815. Having fought France for 20 years and taken the leading part in her overthrow, Britain saved her from mutilation. At the congress of Vienna some of the powers insisted that France must be so reduced in size that she could never become dangerous again. Britain protested that to dismember so glorious a nation would be not only a crime but a folly, for the fragments would forever be trying to get together again, and Europe would have no rest till they were reunited. As a result, France was left intact within the boundaries that she had before the revolution, and Britain's reward was a long period of good feeling between the two countries, of the greatest profit to both. In the present war Britain has already accomplished her main purpose. Her intervention has saved France from being overwhelmed, which would have enabled Germany to hurl her full strength against Russia. Britain can now earn the lasting friendship of both France and Germany by mediating between them. For the past four years the wisest men in England have urged France and Germany to settle their burning question in the only way in which it can be permanently settled—by compromise. That was the most statesmanlike, the most urgently needful work ever undertaken by British statesmen, and it is more needful now than ever. Let Britain insist that whatever be the outcome of the war there shall be no mutilation on either side, no new burning question substituted for the old, but that the old one be settled for good and all—by compromise. In that way the Anglo-Franco-German alliance so long and so devoutly prayed for by every friend of humanity may shortly become an accomplished fact. It would at once have the tacit adherence, soon perhaps the formal adherence, of the United States, and then the international executive power would be complete.

THE SINISTER POWER OF THE AUTOMATIC NO-SAYERS.

The situation recalls a passage from Benjamin Franklin's autobiography. In 1754 he drew up a plan for the union of Britain's American colonies, with a view to the better support of the mother country. Had this plan been adopted there would have been no Revolution; the United States would to-day be British territory, its 100,000,000 inhabitants loyal British subjects, like the Canadians, Australians, New Zealanders; world-wide peace, under Anglo-Saxon supervision, would have become an established fact 50 years ago; there would have been no navy but the Anglo-Saxon navy; Anglo-Saxon supremacy would by this time be accepted throughout the world as one of the immutable laws of the universe. The "practical men" in the British cabinet thought the plan "too democratic," while the "practical men" in the colonial assemblies saw in it "too much prerogative." Thereupon Franklin, pondering over the terrible responsibility of those who rejected his advice, remarks with tragic solemnity:

> History is full of the errors of states and princes. Those who govern, having much business on their hands, do not generally like to take the trouble of considering and carrying into execution new projects. The best public measures are, therefore, seldom adopted from previous wisdom, but forced by the occasion.

In fact, the union of the American colonies, planned by Franklin's "previous wisdom" for the better support of the mother country, was "forced by the occasion" 20 years later through the tempest of the Revolution against the mother country.

A GRAND OPPORTUNITY LOST.

We are "those who govern," and some of us are sadly aware of "having much business on their hands." Are we sure that this circumstance has never prevented us from governing with "previous wisdom"? The dangerous character of the Alaska Panhandle as a breeder of irritation between us and Canada was forcibly brought to public attention during the seven years' controversy which was terminated by the London award on October 20, 1903, just 11 years ago. The proposition to exchange the Panhandle for an equivalent has been discussed in the press during the past five years, particular stress being laid on the value which that transaction would have in setting the example of those mutual concessions which are needed to solve the burning questions that keep the white nations at discord. Had we made the model concession to Canada there is reason to think that the movement for the union of the four great free nations into an international executive power, stimulated by our example, would by this time be so far advanced that the war would have been impossible. We were too busy with "more important matters." Now the mutual concessions are being "forced by the occasion" through a wild cyclone of destruction and agony which threatens to put an end to the supremacy of the white race. Instead of the useful concessions a number of harmful ones will probably be extorted. New fuel will be stored up for the next conflagration, till Asia is ready to overwhelm us all.

DO THE NEXT BEST THING.

We did not have enough "previous wisdom" to adopt "the best public measure"; let us at least gather what wisdom we can from the pangs of a neglected opportunity. Having failed to prevent the war, let us at least do the next best thing—stop

the war as quickly as possible. It is probably true that none of the warring nations would accept our mediation now. There is thus good reason why the mediation itself should be delayed till we feel fairly sure that it will be welcomed; but there is no reason whatever why we should delay a moment to set the example which is to lend weight to our mediation. Even at best it will take some time for the news of our example to circulate in Europe and make the desired impression; and meantime the horrible slaughter goes on. I request therefore that this resolution, designed to prepare the way for early mediation, receive early attention.

SUMMARY.

In conclusion let me present the argument in a nutshell. Sensible people, wishing to remove an effect, try to remove the cause. The man who has a thorn in his thumb will waste his time if he tries to ease the pain with bandages and plasters; the only cure is to draw out the thorn. So long as the nations of Europe are divided by burning questions you will waste your time if you merely discourse on the beauties of peace; the only cure for the war peril is to solve the burning questions. If we were to hint to the European nations what mutual concessions they should make on these burning questions, some of our quick-spoken brothers on the other side of the water would gleefully tell us to mind our business. Happily we need not say a word about it. By making a model concession to Canada we can inculcate the policy of mutual concessions far more effectively and yet make it impossible for the most carping critic to accuse us of meddling.

If a Canadian panhandle extended along our coast to Atlantic City, we should long ago have found the situation intolerable and we should have been furious if the Canadians had waited in dull, boorish silence till we were forced to complain. Now, the fundamental law of Christianity, as well as of the gentleman's code, is the Golden Rule: "Do unto others as you would they should do unto you." Whoever refuses to obey that law is neither a Christian nor a gentleman, however loudly he may claim both titles. I prefer to think that the great majority of our fellow citizens are both Christians and gentlemen.

GIVE THE CELTS THEIR DUE.

I should like to stop at this point, but in the interest of accuracy I feel compelled to add an explanation. The terms "Anglo-Saxon," "Anglo-German," "Anglo-American," in the way they are commonly used, are untrue and unjust, since everybody knows that the United Kingdom is half Celtic, and that the armies which won her victories for the last 100 years consisted mostly of Irishmen, Welshmen, and Scotch Highlanders. Some years ago Mr. Carnegie suggested that this well-known truth be acknowledged by substituting the euphonious and singularly appropriate name "Celtanglia" for the clumsy term, "The United Kingdom of Great Britain and Ireland." How handy it would be to call Englishmen, Scotchmen, Welshmen, Manxmen, Irishmen by the common name of "Celtanglians" instead of the monstrous name "Unitedkingdomofgreatbritainandirelanders!"

The leading men in the British Empire—Celtanglian Empire, I mean to say—Asquith, Grey, Lloyd-George, Churchill—are Celts. They could not do anything more just, more graceful, more statesmanlike, more progressive, more conducive to reconciliation between the English and the Irish and Irish-Americans than to adopt a name which would tell the truth. That inexpensive little act would do more to consolidate the Empire than the dreadfully expensive measures they are now adopting. It would be one of the most effective means to promote Anglo-American reunion. At the same time the fact that the United Kingdom is only half Germanic does not make the present war less fratricidal, for Celts and Germans are brothers, members of the same Aryan family. And since I am adding this postscript in the interest of accuracy, and since there is so much talk nowadays about scraps of paper, it may not be amiss to recall a certain scrap of paper signed on October 3, 1691, just 223 years ago, which was torn up not from dire necessity, but apparently from the convenient assumption that a contract made with Catholics was not binding. I refer, of course, to the scrap of paper associated with the name of Limerick. However, since that mistake has been almost completely mended, it ought not to stand in the way of brotherly feeling, if Britons will but treat their Irish brothers as equals and not ask them to turn against their other white brothers. Remembering how heartily German-Americans and Irish-Americans have fraternized of late, every Irishman must grow sick to think that some of his kindred in the British Army are to-day shooting at the Germans. I am sure every Irishman will do what he can to stop that wretched business.

Cotton.

EXTENSION OF REMARKS
OF
HON. SAMUEL M. TAYLOR,
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 24, 1914.

Mr. TAYLOR of Arkansas. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a short resolution of citizens of my district touching pending legislation on the cotton situation.

The resolution is as follows:

LONOKE, ARK., *October 21, 1914.*

To the Hon. SAM M. TAYLOR, *Washington, D. C.:*

Whereas about 500 cotton-growing citizens of Lonoke County, at the courthouse assembled; and

Whereas a resolution was offered by one of those present asking the chairman to appoint a committee of five, which was unanimously adopted by the convention, to draw up resolution asking the Representatives in Congress to urge the passage of the cotton relief bill of $240,000,000 now pending before the House for the cotton-growing States of the South; Now, therefore, be it

Resolved, That we, the committee appointed by the chairman, respectfully request of you as our Representative in Congress assembled to do all that is in your power to urge the passage of the above bill.

W. K. OLDHAM,
J. W. COOK,
W. E. GLOVER,
L. L. BELL,
C. W. TURNER,
Committee.

General Coal, Oil, and Gas Leasing Bill.

SPEECH
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 12, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 16136) to authorize exploration for and disposition of coal, phosphate, oil, gas, potassium, or sodium.

Mr. RAKER. Mr. Chairman and gentlemen of the committee, this bill is a companion bill, in a way, of legislation for the disposition and use of part of the public domain. For the last 16 years there has been a want of development, there has been a want of legislation, and some legislation that possibly prevented development. In the last two years there has been a bill to extend the rights of the homesteader and desert-land claimants so that they might use the land. Within the last few months we have passed what is known as the reclamation-extension bill. This House has passed the Alaskan coal bill, so that great Territory might be opened up. Within the last few months this House has passed what is known as the Adamson dam bill and also the Ferris water-power bill to relieve the conditions as they were then in existence. There has been much other legislation in regard to the public domain having for its object and purpose its proper utilization. Much of the public domain has been held and is at present being held in reserve, being withdrawn from settlement by homesteaders, from use by desert-land claimants. Much mineral land has been tied up so that it could not be used, prospected, or developed. Much coal land has been in the same way—millions of acres—and the same way with oil lands and with the phosphate, sodium, and other lands, with the idea that reservation means conservation.

There seems to be an idea that if you prevent the taking of Government land or the use by anybody for anybody for any time you are conserving the rights of the present generation and looking out for those that may come in the second, third, and fourth and many generations beyond instead of providing proper conditions for those who are here as well as looking out reasonably, as we ought, for the future. But when you talk conservation it seems to apply only to Government lands, when, as a matter of fact, as it is understood in the East and as it is practiced, it is conserving everything that has been going to waste—the failure to use that part of the coal that has been put on the dumps and burned; timber that has been wasted and destroyed and could have been manufactured and put into a proper use.

The same way with the water that has been going to waste for years in these old settled States. The people are coming to realize now that they can use those streams in every endeavor and effort of human life and even in material things. They realize that that power hitherto has been squandered and not properly used. The use of those streams—the use of every bit of them—means conservation.

When I use that word "conservation" a great many people think that because the Government has some public domain, has some public lands—think that because there are some oil wells and there is some oil belonging to the Government, as well as coal and phosphate and other products that may be valuable—you are conserving it if you prevent its use. There is no question but what there ought to be every effort made to give the consumer cheap products of all kinds—coal, oil, lumber, and every other thing that comes from the soil. You ought to regulate the laws so that he shall have to work only a reasonable length of time, so that he will get the very best results from his efforts. The laws ought to be so drawn that he will have an equal opportunity with every other man, and a few should not be allowed to take and hold land, whether it is in a public-land State or in a State where practically all the public domain has been taken; and to admit that you must use the sovereign power of the Government as a whip hand, to say that a man shall only work eight hours a day, to say that he shall only dispose of his coal or his oil in a certain way, and that he shall only sell it under certain conditions and under certain circumstances, and that he must not combine with anyone to sell or handle or work that coal, is an admission of inefficiency in legislation and of a lack of proper laws to control the output of oil and the output of coal. If you admit it can not be done by proper legislation you will have to admit that all the Eastern and Southern States, where there is coal and oil and gas, can not be regulated, because that land for many, many years has been in private ownership.

In the same way the water powers over which the streams flow are in private ownership; and to admit that you have to go to the Government's sovereign power to regulate all these matters simply as they apply to the West is an admission of weakness that this Congress and no other governmental body or the State legislature or the National Government ought to admit, and, as a matter of fact, none does admit it. The Government could not admit it and still maintain its efficiency as a Government as it ought to be maintained. But the sentiment has grown so strong and there has been so much said about the development of the West that many believe honestly and candidly that the public domain, having been held and being held as it is by the Government, should be administered by the Government in such a way as that its citizens might make the best use of it and have it go into private ownership, and then regulate its control, its disposition, and regulate the products that come from it—regulate it so that those who sell the oil and the coal and the gas and the phosphate shall not oppress the consumer and shall not maintain monopolies on it. That is all that could be asked.

But the West believes that there is an opportunity in sight for the development, for the opening up of its resources; and therefore, for one, I was in favor of passing the Alaskan coal bill, and instead of tying up those resources there, of opening them up, so that the people can use them and get the benefit of them to-day.

The same way with the water-power bill. Our public domain ought to be used, and used legitimately, and it should not be in the hands of a few men. When men have spent from $100,000 to $200,000 or $500,000 in a legitimate enterprise, after having carried their machinery and their outfits miles and miles over mountain trails in wagons and then on horseback or on mule-back, they ought to be encouraged, to the end that they might develop the power and light the surrounding cities and open up the mines and develop them and save the forests that are on the mountain sides, and instead of neglecting them, develop electricity, in order that you may light the city and furnish power for the mine and light your mine and develop it. Because a stream happens to run across a small tract of land, a quarter of a mile, absolutely worthless, upon the side of a hill covered with rocks and sagebrush, no use could be made of it, and it has been permitted under the laws to be absolutely held out and thus prevent development.

We believe that this pending legislation ought to pass; and while we have to take a lease, it is better than want of development. We believe that that country will develop; that men with brains and intelligence and money, with friends behind them, will insist upon using the water power on those sites and pay a reasonable price for them, and that in the long run the country will develop.

The same way in regard to the coal lands. It is better to have a lease and try it and permit it to be opened and permit regulations to be placed upon it, as is done by this bill—regulations which are right and proper and ought to be put into effect by every law beyond all question. Thereby we shall get some use. Instead of being a dog in the manger, and saying, "This is public domain, and therefore it ought not be be used, and ought not to be handled," we propose to go out upon the public domain and put part of it in use. That is conservation. To go out and develop electricity from the streams and generate electricity to run machinery and furnish light. That is conservation and development of the West.

In the same way it is proposed to use these coal lands that have been lying idle, and the same way in regard to the oil. This bill does not apply, as a matter of fact, to the great oil fields of California, because those known oil fields are practically all claimed by private individuals.

Mr. STEPHENS of Texas. Mr. Chairman, will the gentleman yield there?

Mr. RAKER. I do.

Mr. STEPHENS of Texas. Does this apply also to forest reservations in the West, of which you have a great many?

Mr. RAKER. It does. It sweeps the whole thing, and it does not allow the land to be withdrawn for forests—land that is valuable for coal and oil and other purposes. It takes it all in and permits it, under this bill, to be used.

Mr. STEPHENS of Texas. Does it apply to Indian reservations or Indian lands?

Mr. LENROOT. Not unless they become public lands of the United States.

Mr. RAKER. I think we changed the other bill, and we shall have to change this one in the same way.

Mr. STEPHENS of Texas. Is not the gentleman in favor of applying this law to the Indian reservations and Indian lands?

Mr. RAKER. Why, certainly; yes.

Mr. STEPHENS of Texas. Is there any reason why it should not be so applied?

Mr. RAKER. There can not be any reason on earth, and the water-power bill applied to Indian reservations, and was so intended, and my understanding is that this applies to all except a few designated spots.

Mr. LENROOT. Will the gentleman yield?

Mr. RAKER. I yield to the gentleman from Wisconsin.

Mr. LENROOT. As both bills left the committee they applied only to the public lands of the United States, and the Indian reservations are not public lands of the United States.

Mr. STEPHENS of Texas. I propose at the proper time to offer an amendment putting the Indian reservations under the operation of this law.

Mr. RAKER. That was discussed; and my recollection is that the way the bill came from the committee it did include Indian lands. The chairman of the Committee on the Public Lands wanted it to apply to Indian lands and thought it ought to apply to them. Then you segregated a few particular tracts, so that the bill did not apply to them. Now, this bill ought to apply to all the lands of the United States.

Mr. STEPHENS of Texas. I shall offer amendments to make it include Indian lands.

Mr. RAKER. Let me read the bill:

That deposits of coal, phosphate, oil, gas, potassium, or sodium owned by the United States, including those in national forests, but excluding those in national parks, military or other reservations—

It excludes Indian lands at present.

Mr. STEPHENS of Texas. I propose to include them by an amendment which I shall offer.

Mr. RAKER. The idea is that in order to have the bill workable all the lands ought to be included; and I will say to the gentleman from Texas that there is a growing sentiment, a strong feeling in the West, as is shown by letters from individuals and the expressions of organizations, that the Indian lands, reserved or in use, that have oil, coal, phosphate, and other minerals in them ought to be used to-day, to the end that the land may be developed and the Indians get something to maintain them and help them along, and that it will build up the community surrounding the Indians in the same way. That is the way I feel about it, and if that provision is not included in the bill, I feel that it ought to be included.

In regard to the oil lands in California, all the known fields practically are under claim, those that are reserved and those that are not reserved, known as the naval reserve. The committee before reporting this bill reported a bill known as the urgency bill, for those who were practically prohibited from selling their oil, in order that they might dispose of it.

The second bill is known as the permanent lease bill, which was reported by the Committee on the Public Lands (H. R.

15661), which bill and the report upon it I will insert in my remarks. The bill is as follows:

A bill (H. R. 15661) authorizing the Secretary of the Interior to lease to the occupants thereof certain unpatented lands on which oil or gas has been discovered.

Be it enacted, etc., That upon relinquishment or surrender to the United States, within six months from the date of this act, by any locator or his successors in interest of his or their claim to any unpatented oil or gas lands included in an order of withdrawal, upon which oil or gas had been discovered, was being produced, or upon which drilling operations were in actual progress January 1, 1914, and the claim to which land was initiated prior to July 3, 1910, the Secretary of the Interior may in his discretion lease on such reasonable terms and conditions as he may prescribe to such locator or his successors in interest the said lands so relinquished, not exceeding, however, the maximum area of 640 acres to any one person, association, or corporation, said leases to be conditioned upon the payment by the lessee of a royalty of not exceeding one-eighth of the oil or gas extracted or produced from the leased premises or the proceeds thereof, each lease to be for a period of 20 years, with the preferential right in the lessee to renew the same for succeeding periods of 10 years, upon such reasonable terms and conditions as may be prescribed by the Secretary of the Interior.

SEC. 2. That the Secretary of the Interior is hereby authorized to perform any and all acts, and make such rules and regulations as he may deem necessary and proper for the purpose of carrying the provisions of this act into full force and effect, and all leases or assignments of leases shall be subject to such rules and regulations, and the failure of any lessee or of his successor or successors to comply with the terms and conditions of the lease shall work a forfeiture of the same, to be declared by a court of competent jurisdiction.

The idea was that that bill would be passed and disposed of before the general leasing bill was acted upon, to the end that those who had filings upon oil lands in California and were actually developing those lands might, if they so desired, relinquish their claims and go under leases.

I want to say that practically no man appeared before the committee in regard to coal. It seems to be a kind of general concession that coal lands ought to be leased. That is the way it seems to me now.

The greater part of the hearings revolved around the question of oil and gas, and it is my recollection, from being present at the hearings and from reading them since, that there was an unanimous sentiment among all the interests that appeared that the Government ought to enter upon a leasing system so far as oil lands are concerned, disposing of those that have claims upon them now, permitting them to release if they desire and accept leases, and that they will then be protected, and all the future development of gas and oil will be protected. In the bill it is provided that if it is in an unknown field, a certain distance from a known field, after discovering oil they will receive out of the original application 640 acres and obtain a patent to it, and the Government will get the balance, to lease or dispose of as it sees fit. If it is within the 10-mile limit the man will get a lease or a permit for 640 acres, and if he discovers oil he will then get a patent to 160 acres.

Mr. STEPHENS of Texas. Will the gentleman yield?

Mr. RAKER. I yield to the gentleman from Texas.

Mr. STEPHENS of Texas. Is it not a fact that under the present law, in the way it is administered, the lands containing oil are taken up under some kind of a fiction of law as placer claims, and that the claimants are endeavoring to evade the law by holding as placer claims claims that are not placer and that have no gold whatever in them, but which contain oil, coal, and other minerals?

Mr. RAKER. The placer claims have been held applicable to oil lands. The placer-claim law permitted eight individuals to join and file upon 160 acres of land, and repeat it as often as they wanted to, so long as they developed their filings in succession and complied with the law; but there were many cases where two or three men handled the concern and used the names of their friends or of dummies to make up the other six. They would keep repeating that until they had obtained large tracts of land without any intent of all eight to comply with the law. They permitted this placer-claim law to apply to oil lands. Two or three men would use the names of their friends and others and then get an assignment of their claims or practically get a retransfer, and a few men in that way would be able to handle large tracts of land; whereas if each had legitimately and honestly been a locater and complied with the law a patent would have issued to all eight, each having his proportion; and if the law had been complied with and carried out, and wells actually drilled upon each tract, there would have been no detriment to the Government or to the locality or to the individual, because it has been demonstrated in the oil fields of California, as in the placer and in the lode mining claims of the West, that as much money has been put into mining claims as ever has been taken out. But it was the use of dummies, some few fraudulent, but many of them honestly used. A man would use the name of his daughter, his wife, his son, or others, and they would get a patent to a tract of land.

Lately the department has held that that was a dummy entry, after it had been in practice many years. Now, this especial general-relief bill reported by the committee permits those who have their claims thus obtained or their assignees to relinquish the entire claim and obtain a lease from the Government not exceeding 640 acres. That will protect the Government and protect the individual. The California people are satisfied with that course.

Mr. STEPHENS of Texas. Will the gentleman yield?

Mr. RAKER. Yes.

Mr. STEPHENS of Texas. Is it not a fact that the term "placer" applied only to gold originally, but by some fiction they afterwards included in it oil and even town sites? And is it not a fact that some towns are established and located on mining claims, and are held in that way?

Mr. RAKER. I will concede that originally it was intended to apply to placer gold and that they afterwards interpreted it to apply to oil as a mineral. I do not know of any place where they have taken a town by a placer claim, because anybody in that western country can honestly and legitimately take a placer claim and get gold out of it. The only question is whether you want to work it. But it is only applied improperly to oil claims and has been used there legitimately and all participated in it, and if all received benefit from it there would be no question. But that is all past and gone. The people appeared before our committee and wanted relief, and the Government ought to give them relief. There should be development.

Mr. STEPHENS of Texas. Will the gentleman again yield?

Mr. RAKER. Certainly.

Mr. STEPHENS of Texas. Is the gentleman aware that in many portions of the West, where stock raising and especially sheep raising is the main industry, springs have been located as a mining claim and a number of springs, covering 10 or 20 miles of service, will be held under mining claims?

Mr. RAKER. I have been over the mining territory, as perhaps no other man has been, and I must say that I have never heard yet of a spring being located as a placer claim and held without being worked.

Mr. STEPHENS of Texas. A mining claim.

Mr. RAKER. Or a mining claim.

Mr. STEPHENS of Texas. Usually it is a lode claim.

Mr. RAKER. That is under a different law.

Mr. STEPHENS of Texas. All it requires is the digging of a hole 10 feet deep.

Mr. RAKER. You must find the lode, and it must be of a merchantable quality and value, so as to produce gold or other mineral. You have to stake your claim on the ground, and you can only get a claim not exceeding 1,500 feet long and 300 feet wide on each side of the lode, and you have to do the assessment work to the amount of $100 each year and maintain it, and then pay $2.50 per acre when you get your patent.

Mr. STEPHENS of Texas. Yes; but can not they make it 1,500 feet, so as to cover the springs?

Mr. RAKER. I never heard of a lode-mining claim being located in a spring as a mining claim.

Mr. STEPHENS of Texas. Has the gentleman ever been in Arizona or New Mexico?

Mr. RAKER. Yes; I have been in Arizona and New Mexico and old Mexico. I have not been in Guam or Tutuila. I have missed those two. The idea that there have been great frauds in mining and the development of the country is a great myth. There have been some mistakes, I know. I do not know of a higher class of citizenship in the United States than these miners and their families. There has been no class of citizens that has done more to relieve the country in time of stress and need than the miners. According to the report from the Geological Survey, issued within the last two weeks, there is not an enterprise to-day that has advanced so much, that has spent energy and exertion better to the interests of this country that silver and precious metals might be produced than has this mining industry. God speed their efforts in every line that their work may continue! They have been the salvation of the country three times in its distress, and we believe again at this time they are going to be its savior. In every legitimate enterprise in the West the farmer and the miner and the sheepmen and the cattlemen and the oilmen and the men that labor ought to be given an opportunity to develop it, and not preserve it and tie it up. I admit that there are places that ought to be reserved, and those are the natural wonders of the great West that ought to be preserved and made natural parks, so that every man, woman, and child in the United States may go and see the wonders in their primitive state. The Government can do well to develop them.

One more thing and I am through. The question of the proceeds of these leasings is of vital importance. I shall not go into it. As I view it, very few have given the subject thought as to where the money should go. The bill provides that it shall go to the reclamation fund, and after being used once, one-half to the State and one-half to the general fund. Everybody that has observed the development of large States knows that a community is developed because of the mines. The taxation of these mines ought to go to these localities to develop. I believe candidly that wherever and however this proposition works it is going to be an advantage and a great change from what we have had, and if there are any imperfections in it Congress can correct it and place it so that every gallon of oil and every bit of coal will be used.

Mr. STEPHENS of Texas. Mr. Chairman, will the gentleman yield?

Mr. RAKER. Yes.

Mr. STEPHENS of Texas. What is to be done with the revenue derived from this conservation idea under this bill?

Mr. RAKER. Under this bill, as in the other bill, it is used once for the reclamation fund, and one-half of it thereafter having been used once goes into the State treasury and one-half to the general fund of the Treasury of the United States. I thank you, gentlemen.

The Scarcity of Cattle.

EXTENSION OF REMARKS

OF

HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 24, 1914.

Mr. RAKER. Mr. Speaker, under permission given me to extend my remarks on the question of the scarcity of cattle in the United States I am inserting an article by S. A. Baldus, which is as follows:

IS THERE AN ALARMING SCARCITY OF CATTLE?

1. THE PACKERS' CASE STATED.

All kinds of meats are to-day approximately 100 per cent higher in price to the consumer than they were 15 or 20 years ago. Why? The packers say it is because there is a scarcity of cattle. Not only this, but they tell us the situation is most alarming, and that, consequently, the prices are going still higher, and that if the shortage continues the American public will within 10 years have to choose between eating horse flesh or paying $1 a pound for porterhouse steak.

Against the packers' statement that there is an alarming scarcity I enter an absolute denial. There is no scarcity of cattle. The per capita supply is greater than formerly and more than normal. But before proving my contention let us hear the packers' side of the case.

J. A. Spoor, chairman of the board of directors of the Union Stock Yards and Transit & Chicago Junction Railroad, in an article published in the Chicago Record-Herald January 1, 1913, said, among other things: "There is a world shortage of live stock, especially cattle. The populations of all civilizations are growing much faster than the general meat food supply," etc.

Here's an extract from an editorial entitled "Supply and Demand," recently published in the National Provisioner, which is the official organ of the American Meat Packers' Association: "Meat prices are high—almost abnormal—and the public has been taught to blame the meat trade for it. This belief persists, despite the dawning consciousness in the public mind that there is a world shortage of meat. * * * Meat will be cheaper when we raise more of it," etc.

In August, 1913, the United Master Butchers of America held their twenty-eighth annual convention in Boston. President John T. Russell, of Chicago, delivered an address. Here are a few sentences culled from it: "The latest statistics show that we have in the United States about one-third of a beef steer per capita—deducting the breeding cattle it will be considerably less per capita—to provide for the population. * * * Consumption has overtaken production in the race, and in less than 10 or 12 years meats will not only be a luxury but a matter of history," etc.

In September, 1913, the Eighth Annual Convention of the American Meat Packers' Association was held in Chicago. The opening report of the executive committee speaks of the "crisis confronting packer, producer, and consumer." The following extracts are taken from the National Provisioner, September 27, 1913—the meat packers' official organ: "The American meat-packing house situation and that of consumers of meat for production in this country are both of them more precarious than at any other time in our history. * * * President Mischoff puts it picturesquely in his opening address when he says, referring to past periods of meat plentifulness, 'Those conditions of abundance have now utterly changed, and the surplus of cattle this Nation boasted of 15 or 20 years ago has been wiped out, and in its stead there is the gaunt specter of a beef famine staring us in the face'; and he added: 'Should this percentage of decrease—in our beef and cattle supply—continue until 1923, porterhouse at a dollar a pound retail will be cheap.'"

This keynote of a present crisis and a pending calamity at the meat packers' convention developed into a veritable diapason; at least it was struck by every speaker in the convention, some going so far as to predict that the day is not far distant when the people of the United States will be compelled to eat horseflesh.

But the biggest lesson of the meat packers' convention, as far as the public is concerned, and which, more than anything else said by any speaker, was calculated to again impress the public mind with the gravity of the situation and the seriousness of the crisis was the resolution passed on the last day, by virtue of which the meat packers "resolved" to spend $500,000 at the rate of $100,000 a year to revive the "languishing" cattle industry. This "news" item was flashed across the country; scarcely a newspaper reader that did not see it—scarcely a reader that was not impressed as the meat packers desired.

I could quote from hundreds of addresses, newspaper interviews, statistical items, and special articles, etc., to show by what astute methods the public mind has been cudgeled into the belief that there is a scarcity of cattle. Probably the most effective means of "officially" impressing the public with the seriousness of the shortage of cattle situation is the publication of interviews with or statements by the heads or employees of Government bureaus or departments. The Bureau of Animal Industry especially has been assiduous in spreading the "scarcity" propaganda. Officials and attachés of this bureau are frequent contributors to the National Provisioner, official organ of the American Meat Packers' Association. As an example: In the issue of November 22, 1913, there is an article by B. H. Rawl, Chief of Dairy Division, United States Bureau of Animal Industry, entitled "Farmers can furnish ample meat supply, but they must be shown how to produce at a profit," in which all the platitudinous utterances concerning the "scarcity" of cattle situation are repeated.

In this same issue of the National Provisioner we are told editorially that "Secretary Houston has taken steps to study the beef-production problem. He understands the need to increase the beef supply and keep prices from soaring to the point when a steak will be a luxury."

In an article entitled "Marked decline in beef production—Rise in prices natural result of shortage," published in the Missouri and Kansas Farmer of November 1, 1913, James M. Pickens, of the Bureau of Animal Industry, is quoted as follows: "The high cost of meat is a serious reality, and it is now obvious that the rise in prices in recent years is the material result of a shortage in production."

About a year ago Dr. A. D. Melvin, of the Bureau of Animal Industry, was sent to South America "to investigate the slaughtering and meat-preserving processes in vogue in the packing plants." He was quoted in the New York Commercial as having said before sailing: "We no longer have the former abundant supply of cattle raised chiefly on the free range. The range is being put up and fenced off into farms or devoted to sheep grazing. In addition, there is a great increase in the price of corn and feed, which have made cattle feeding a risky and expensive undertaking. Estimates by one Bureau of Statistics show that in the last six years the number of beef cattle in the United States has fallen from 51,566,000 to 36,080,000, a decrease of 15,500,000, or 30 per cent. * * * The home demand for meat, on the other hand, has been increasing along with the population, and according to the census we have 29,000,000 more people to feed than we had 20 years ago. Americans are great meat eaters," etc.

Who, after reading almost daily statements by so-called authorities, specialists, and experts—statements and prophecies—repeated in varying forms and under various guises over and over again, would not get the impression that there is indeed an alarming scarcity of cattle? And who so bold as to deny the truth of the pessimistic utterances of authorities, specialists, and experts, especially since the statistics seem to confirm them?

There is a class of men in this world who, as Artemus Ward has said, "know so many things that ain't so." The packers, their allies and cohorts, belong to this class. I know of no publicity campaign that has been so successfully carried on as this one of the packers to persuade the public mind into the belief that there is an alarming scarcity of cattle. Against all their claims, contentions, and predictions I place this simple statement: There is no scarcity of cattle and certainly no cause for alarm; no reason why the prices of meat should be as high as they are; and certainly no justification for still higher prices. And these things I will prove in subsequent articles.

2. WHEN DID THE "SCARCITY" BEGIN?

The packers have said that there is an alarming scarcity of cattle, and I assert just as positively that there is no scarcity and certainly no cause for alarm. The packers are pessimists; I'm an optimist. That is the difference. They have assiduously used every method, employed every means, and overlooked not a single opportunity to foster their pessimistic propaganda. Hercules labored no harder to clean the Augean stables than I shall labor to shoot light through their gloomy claims and predictions.

If the packers are so cocksure that there is an alarming scarcity of cattle, surely it is pardonable to ask them:

When did the scarcity begin? When did it assume alarming proportions? When did the supply cease to be adequate? When did it fall below normal?

These are certainly fair questions. The packers can not object to them. The statistics they quote do not show that there is an alarming situation. I have carefully examined and correlated all available data on the subject and have been unable to find the beginning of the scarcity. On the contrary, my computations, based on Government statistics and the packers' own reports, show that far from a shortage the per capita supply of cattle is greater than in former years—more than adequate, and certainly not below normal.

The statistics show that in 1870 the supply of cattle was 23,820,608; the population was 35,558,371. Consequently, a per capita supply of 0.66, or 3.30 head per family of five persons.

In 1909, or 40 years later, the supply of cattle was 71,099,000; the population was 90,556,521. Consequently, a per capita supply of 0.78, or 3.90 head per family.

But I do not consider it either fair or scientific to make comparisons of two separate census years. I hold that conclusions based on such a comparison are, to say the least, misleading, if not dishonest. Yet it is by doing this very thing that the packers have arrived at their erroneous conclusion that there is a scarcity of cattle; and I can't make myself believe that they are so unsophisticated.

I do not consider it fair to compute increase or decrease in production by comparing either census years or single years. Such comparisons prove nothing; they are worthless. There is a better way in which to obtain an approximate understanding as to the status of the cattle industry, and that is to compare periods of years. Let's try it and see what the result will be.

Let us divided the 40 years from 1870 to 1909 into decades, then make our computation.

From 1870 to 1879 the yearly average number of cattle was 27,872,790; average population, 45,737. Consequently, the per capita supply was 0.64, or 3.20 head per family

From 1880 to 1889 the yearly average number of cattle was 42,947,951; average population, 55,606,574. Consequently, the per capita supply was 0.77, or 3.85 head per family.

From 1890 to 1899 the yearly average number of cattle was 50,471,687; average population, 68,390,375. Consequently, the per capita supply was 0.73, or 3.65 head per family.

From 1900 to 1909 the yearly average number of cattle was 64,197,947; average population, 83,275,548. Consequently, the per capita supply was 0.77, or 3.85 head per family.

In the light of these conditions I am impatient for the information as to when the scarcity of cattle began. Certainly not prior to 1909. Yet the calamity cry about "scarcity" is older than that, and the high prices of meats, owing presumably to the "scarcity," began before 1909.

While it is very important that we determine once and for all just when the "scarcity" began, we must not, in our eagerness to prove that there is no scarcity, ignore the fact that the statistics show a considerable falling off of cattle within recent years. Granted. But this falling off does not prove that there is a "scarcity" of cattle. Let us take the last 13 years (from 1900 to 1912, inclusive); let's divide them into periods of 5, 5, and 3 years. By doing this we obtain the following results:

	Cattle, average per year.	Population, average per year.	Head, per capita.	Head, per family.
1900–1904	50,094,928	79,330,573	0.632	3.160
1905–1909	68,600,085	87,320,533	.785	3.925
1910–1912	62,513,667	93,792,509	.666	3.330

Alas and alack! Do not these results verify the packers' claim that there is an alarming scarcity of cattle? No; and again, no! They prove nothing of the kind. On the contrary, they show that there was a considerable increase in the period 1905–1909; and that this period of excessive production was followed by a necessary decline, thus bringing us nearer to a normal basis again.

That is the lesson the above figures emphasize. Let there be no talk of a shortage, for there is none. And please observe also that the per capita supply for the three years from 1910 to 1912 was greater than for the five years from 1900 to 1904. Consequently there is little justification for the calamity howl of the packers at the present day.

The packers, however, have read their jeremiads around the statistics showing a decline within the past few years, and like "Rachel weeping for her children," refuse to be comforted. It is for this reason that I will bring to their attention a most important fact.

Let them remember that cattle production jumped from 43,902,414 in 1900 to 62,333,870 in 1901—an enormous increase of nearly 19,000,000 head in a single year. For the next few years the stock on hand at the end of the year, as the statistics show, hovered around 61,000,000, increasing to 66,861,522 in 1906; and again increasing to 72,533,997 in 1907.

Consequently there were three enormous increases in the decade 1900 to 1909; the first in 1901, an increase of 18,431,356 head over the preceding year; the second in 1906, an increase of 5,619,615 head over the preceding year; the third in 1907, an increase of 5,672,474 head over the preceding year.

These three tremendous increases gave to the country an abnormally large supply of cattle. Decline was bound to follow. To attach undue importance to it is wicked. To cry over the decline and entirely ignore the three great increases above noted is worse than wicked. Balance the former increases against any present decline and you can not by any legitimate method of computation read into the results that there is a "scarcity" of cattle.

3. THE GROWTH OF THE MEAT-PACKING INDUSTRY.

The growth of the slaughtering and meat packing industry is the best proof that there is no scarcity of cattle. In the preceding article I asked, "When did the scarcity of cattle begin? And when did the cattle situation become alarming?" etc. To some these questions may have seemed irrelevant and asked for no definite purpose. Those who formed this impression are wrong, as this article will show. They will also see why it is important for the packers, who have so zealously labored to inform the whole world that there is an alarming scarcity of cattle, to give a fairly good answer. It is clear that they had not made their pessimistic discovery of a cattle scarcity by 1902; for in the packers' trial held in Chicago about three years ago it was shown that three of the Chicago packers had entered into a contract May 31, 1902, "for the formation of a $500,000,000 company to buy all smaller packing companies." (The deal was not consummated.)

Moreover, it is clear that they were not aware that there was a scarcity of cattle by 1907, for in that year, as shown at the packers' trial, a combination of Chicago packers whose legitimate assets liberally estimated by themselves were said to be worth $182,000,000 attempted to raise their capitalization to a total of $773,000,000, an increase of over a half billion dollars. (This scheme also failed of consummation.)

It is difficult to understand what species of business sagacity could have suggested so enormous an increase of capitalization in order to gain control of an industry which we are told by those engaged in it is languishing on account of scarcity of raw material.

That there was no scarcity of cattle as late as 1909 is clear from a comparison between 1904 and 1909, published in the Abstract of the Thirteenth Census (1910), showing the growth of the packing industry, from which I will take the following as having a direct bearing on the subject under discussion:

In 1904 there were 1,221 slaughtering and meat packing establishments; in 1909 there were 1,641; an increase of 34.4 per cent.

In 1904 there were 88,819 persons engaged in the industry; in 1909 there were 108,716; an increase of 22.4 per cent.

In 1904 there were 12,090 salaried employees in the industry; in 1909 there were 17,329; an increase of 43.3 per cent.

In 1904 the average number of wage earners was 75,399; in 1909 the average number was 89,728; an increase of 19 per cent.

In 1904 the primary horsepower of the industry was 119,311; in 1909 it was 209,707; an increase of 74.9 per cent.

But it would not be fair to the packers to give only Government figures. For this reason let us take the packers' own reports as published in the Price Current Annual of 1913, and which show the growth of the slaughtering and packing industry. Thus we learn that the total number of cattle slaughtered at four western centers, viz, Chicago, Kansas City, St. Louis, and Omaha, rose from a total of 2,362,000 head in 1888 to 4,292,000 in 1912, an increase of nearly 82 per cent. (The increase in the population for the same period was less than 60 per cent.)

From further statistics in the Price Current Annual we can trace the increase in the slaughtering of the four western centers:

	Chicago.	Kansas City.	St. Louis.	Omaha.
In 1888	1,643,000	374,000	211,000	134,000
In 1912	1,681,000	1,069,000	963,000	599,000
Increase, per cent	2.26	185.82	356.39	347.01

The increase in the wholesale slaughter and packing of cattle is furthermore emphasized when we consider that according to the statistics in the Price Current Annual the number of cattle slaughtered during the past 25 years in the four western centers total an annual average of 3,448,100 head for the decade from 1888 to 1897, an annual average of 4,451,800 for the decade from 1898 to 1907, and an annual average of 4,527,800 for the five years 1908 to 1912, inclusive—a steady and progressive increase in each period.

Remember, please, that these averages cover only the four cities above specified. In other words, they do not include the slaughter in the allied wholesale slaughtering and packing establishments throughout the United States, the extent of which may be judged from the statistics for 1909—the only year for which complete data are available—and according to which 8,114,640 head of cattle and 2,504,728 calves were slaughtered by the wholesale packers and slaughterers in 1909.

Thus from governmental sources as well as from a computation of the packers' own statistics we learn that the scarcity of cattle is purely hypothetical. The steady and progressive growth of the slaughtering and meat-packing industry accurately reflects the steady and progressive increase in cattle production.

4. WHAT IS NORMAL PRODUCTION?

Here are the statistics upon which the packers have based their statement concerning an alarming scarcity of cattle:

1900	43,903,414
1901	62,333,870
1902	61,424,599
1903	61,764,433
1904	61,049,315
1905	61,241,907
1906	66,881,522
1907	72,533,996
1908	71,267,000
1909	71,099,000
1910	69,080,000
1911	60,502,000
1912	57,959,000

Please note again, as previously pointed out, that there were three great increases from 1900 to 1907. Please observe, too, that the year 1907 was the year of maximum production. See what a tremendous leap from 43,903,414 head of cattle in 1900 to 72,533,996 in 1907, an increase of nearly 29,000,000 head in seven years. If there were another such enormous numerical increase in the following eight years, the resulting overproduction would paralyze the industry. But because there is no such increase in sight, because, on the other hand, there is observable a gradual decline from the high figure reached in 1907 to the more normal basis of former years, the packers have turned prophets of evil days to come.

Some statisticians, not content with the showing made by the above statistics, make a distinction between steers and milch cows. Thus Mr. John T. Russell, of Chicago, president of the United Master Butchers of America, and whom I quoted in my first article, emphasized that "the latest statistics show that we have only about one-third of a beef steer per capita to provide for the population." Of course Mr. Russell was very careful not to say anything about the species of cattle that can not be classed as "steers." It may be chivalry that prompts Mr. Russell and other packer statisticians to hesitate admitting that female cattle is brought to the shambles; nevertheless it is obviously unfair not to include milch cows when discussing the visible cattle or meat supply, since every milch cow, unless she dies of old age, is finally converted into meat and sold over the counter at fancy prices to the consumer.

There is no excuse for separating the steers from the milch cows unless the statistician desires to put the worst possible interpretation upon the situation.

This brings us to the question, What is normal production? If the packers know or pretend to know, we are interested to hear their answer. In the meantime the absence of any authoritative statement with regard to this point leaves us free to base our computations on the figures at hand.

In 1870 the cattle production, based on the Government statistics alone, gave us 0.66 per capita, or 3.10 head per family. Let us compare this with the per capita and per family production in a few of the years given above:

	Head per capita.	Head per family.
1900	0.579	2.895
1904	.740	3.700
1907	.830	4.150
1909	.785	3.925
1910	.749	3.745
1912	.607	3.035

Now, as a matter of fact, the per capita and per family production is considerably greater than here indicated. The statistics given in the beginning of this article, and upon which the packers principally base their claims that there is a scarcity of cattle, do not represent the total supply of cattle. They merely show what is left after the year's slaughtering has been deducted. They show "stock on hand" on January 1 of each year. Remember that! It is very important.

Consequently if one is truly desirous to discover what the actual cattle production is per capita or per family, it is necessary to add to the "stock on hand" January 1 of a given year the number of cattle killed in the preceding 12 calendar months. The results thus obtained

will show a remarkably healthy situation in the cattle industry even at the present time.

Let us take one year. The most complete statistics ever gathered by the Government were for the year 1909. During that year the slaughter of cattle and calves was 20,183,447. Add to this the stock on hand December 31, 1909, or, as the statistics put it, January 1, 1910, and we have the enormous total of 89,263,447; in other words, the per capita supply for 1909 was 0.985, or 4.925—nearly 5 head—per family.

This, it would seem, is large enough production. Indeed, it may be seriously questioned whether it is desirable to materially increase the present output. What reasons can be advanced for a larger production, and who would benefit thereby? The producer would not benefit, for there would be no increase in cattle prices for him. The consumer certainly would not benefit, for the whole history of meat prices during the past 15 years emphasizes this one point: That the larger the production of cattle the higher the prices of meats to the consumer.

Briefly, then, the claim that there is a scarcity of cattle is pure fabrication, a prodigious fiction compiled from a single set of incomplete—I had almost said irrelevant—figures, the most damnable statistical lie of the twentieth century, and when employed to explain why prices of meats are high it becomes the grossest economic falsehood ever foisted on a supposedly intelligent people.

5. INCREASE IN CATTLE PRODUCTION GREATER THAN INCREASE IN POPULATION.

While the emphasis is laid on the scarcity of cattle situation, some more or less ingenious arguments have been advanced to bolster up the contention. Chief among these is the claim that during the past census decade the population has increased 21 per cent while cattle production has declined about 32 per cent. This would indeed be alarming if it were true, but the situation is saved by the fact that it is not true. Like the rumor concerning Mark Twain's death, there is here gross exaggeration. One part of the statement is true—the population of the United States has increased by 21 per cent.

But the cattle situation can not be computed by comparing the "stock on hand" in 1900 with the "stock on hand" 10 years later. If John Smith went into business in 1907 with a capital of $100,000, built and equipped his plant, established a profitable business, and his 1910 inventory reveals that he has only $75,000 in bank—that is, $25,000 less than he began with—does he conclude that he is bankrupt or that his affairs are in an alarming condition? Yet this is precisely what we are doing when we cry calamity, because there were fewer cattle in 1910 than in 1907.

To say that the population in the last 10 years has increased 21 per cent and the supply of cattle has declined 32 per cent is the flimsiest kind of statistical lie. It is so childish, so absurdly grotesque, that I marvel it has not been exposed before now. But it seems to have escaped detection. "Expert" statisticians have not put their finger on this inherent weakness in the packers' jeremiad. So-called authorities seem to have deemed it beneath their notice. Statistical "specialists" have ignored it. And yet the absurdity of the statement is so palpable, so gross, so rank, that it is difficult for me to believe that it was either ignorantly or innocently overlooked. The lie has done its unholy work long enough; it deserves to die an ignominious death.

The decline in cattle production began in 1907. Prior to that time the supply of cattle rose steadily until it reached its maximum in 1907. Hence the decline was only 3 years old in 1910. But the decline is only apparent, not real, for, as a matter of fact, the yearly average for the three years, 1908–1910, was greater than for the three preceding years. Here are the figures:

	Average.
1905–1907	66,885,808
1908–1910	70,482,000

Now, as a matter of fact, in the whole history of cattle production increase in production has been almost uniformly greater than the increase in population. Thus, for example, the increase in cattle production from 1870 to 1909 was 198.40 per cent, while the increase in population for the same period was only 154.66 per cent. But, as stated before, it is unscientific to make comparisons between census years or single years.

In a previous article I divided the 40 years from 1870 to 1909 into decades, which is altogether a more scientific comparison. Here are the results:

	Cattle increase.	Population increase.
	Per cent.	*Per cent.*
1870–1889	54.1	30.1
1890–1899	17.4	22.8
1900–1909	27.2	12.2
Cumulative increase	98.7	65.1

From this we glean the information that with the exception of the decade 1890–1899, during which the percentage of increase for cattle was 5.2 per cent less than the percentage of increase for population (and which was more than regained the following decade), the increase in cattle production was greater than the increase in population.

Now let us institute comparison for the last two census decades:

	Cattle.	
	Yearly average.	Increase.
		Per cent.
1891–1900	48,787,049	.....
1901–1910	65,645,574	34.93

	Population.	
	Yearly average.	Increase.
		Per cent.
1891–1900	69,695,058	.....
1901–1910	84,893,542	21.79

Ponder on these results; they are obtained in the only way I deem legitimate. They not only disprove that there has been a decrease of 32 per cent during the past 10 years, they prove, on the contrary, that there was an increase of nearly 35 per cent in cattle production over the preceding decade. And more than that, that the increase in production was greater than the increase in population.

You may recall that in the first article of this series I quoted from an interview that Dr. A. D. Melvin, of the Bureau of Animal Industry, gave to the New York Commercial just about a year ago. In this interview appears the following remarkable statement:

"Estimates by one bureau of statistics show that in the last six years the number of beef cattle in the United States has fallen from 51,566,000 to 36,030,000, a decrease of 15,500,000, or 30 per cent."

In the above figures Dr. Melvin did not include milch cows, taking cognizance only of what are designated in the statistics as "other cattle." He also makes his comparison of other cattle than milch cows between the year of greatest production, viz, 1907 and 1913, the year of least production, which is obviously unfair and unscientific.

But even taking "other cattle" than milch cows into consideration, Dr. Melvin is by no means justified in giving the pessimistic interpretation contained in the reported interview. For as a matter of fact the yearly average of "other cattle" for the six-year period 1902–1907 was 45,881,600, while for the six-year period 1908–1913 it was 44,950,000, which would show only a slight decrease for the latter period. But this decrease is more than offset by the increase in "milch cows," comparative averages of which are as follows:

For the six-year period 1902–1907, a yearly average of 18,259,362.

For the six-year period 1908–1913, a yearly average of 21,122,333.

Here are the rock-bottom facts concerning the total cattle situation for the six-year period mentioned by Dr. Melvin as compared with the six-year period preceding it:

All cattle, yearly average.

1902–1907	64,145,962
1908–1913	64,405,666

Certainly it disproves Dr. Melvin's claim that there has been a decrease of 30 per cent in the last six years.

6. THE PASSING OF THE RANGE NO CALAMITY.

We have seen that there is no reason whatever for saying that cattle production has declined 32 per cent during the past 10 years. No such phenomenon has taken place and there is nothing in the present cattle situation to cause either gloom or apprehension. The statistics when fairly analyzed prove this beyond the shadow of a doubt.

But there is, as is well known, a group of individuals who for reasons best known to themselves, deem it desirable to cover the brightest canvas with black daubs. They can't be happy unless they are miserable.

On a par with the flimsy statistical lie that cattle production has declined 32 per cent is the shallow "argument" that the free range has disappeared—and that this fact is in a large measure responsible for the present "scarcity" of cattle. Gallons of tears have been shed by packer statisticians over the passing of the range. Why not also lament the passing of the prairie schooner? Why not weep over the disappearance of the stagecoach?

It is quite true that the free ranges have given way to farms; but that is progress, not retrogression. As Dr. Melvin expressed it a year ago: "The range is being put up and fenced off into farms." This change in conditions has affected the cattle situation, indeed; but for the better. If you don't believe it, examine the statistics, which show conclusively that the per capita or aggregate production has been greater since the passing of the range. There are, indeed, fewer ranges and fewer ranchmen, but the number of farms and cattle producers has increased considerably. Raising cattle for the market is no longer the specialized industry of a few thousand; it is to-day the regular pursuit of millions. And the change from several thousands ranchmen to several million cattle raisers, far from having a depressing effect upon the industry, has been stimulating, as the statistics will amply prove. Remember that the maximum production was reached in 1907, at a time when the free ranges might be said to have been pretty well broken up.

The claim that the cattle industry languished as the ranges began to disappear has not even the merit of being a clever statistical lie; it is so stupid an argument, so crude a deception as to be scarcely worthy of serious consideration. Yet it has been employed so frequently and unblushingly by so-called authorities that it deserves to be nailed just as a common lie. The simple truth is that as the ranges began to disappear the cattle industry began to flourish. I do not ask you to accept my word for it—just see for yourself; examine the statistics.

With greater show of logic the packers and other parties interested in maintaining the impression that "the gaunt specter of a beef famine is staring us in the face" might attempt to explain that the prices of meats are high because cattle fed on land worth a few dollars per acre can be sold cheaper than cattle raised on land valued at $150 to $250 an acre.

The weakness of such an explanation would, of course, be that the consumer is paying just as much of an increase for meat that is produced on the high-priced farm as for meats produced on the cheaper land. The consumer does not know, and he is not told, whether the meat he consumes was range fed or farm fed.

Moreover (and it is a singular thing, too), according to the statistics given in the Yearbook of the Department of Agriculture (p. 682, table 146), cattle coming from the range States—that is, from States where land is comparatively cheap—is valued higher than cattle coming from farm States, where land values are high, to prove which I have selected a few from the complete list given in the Yearbook of the Department of Agriculture. Just take a glance at them and draw your own conclusion:

The average price (January 1, 1912) per head for cattle in Wyoming is given as $38.80; Montana, $38.40; Colorado, $34.10; Nevada, $33.30; Oregon, $32. In the States where land is valued from $100 to $250 an acre: The average price in Iowa was $33; Illinois, $31.50; Indiana, $30.10; Ohio, $29.80; Wisconsin, $21.70. The average price for Texas cattle is given as $22.60. The number of head of cattle in the above States on January 1, 1912, was as follows: Wyoming, 506,000; Montana, 717,000; Colorado, 921,000; Nevada, 433,000; Oregon, 452,000; Iowa, 2,607,000; Illinois, 1,228,000; Indiana, 686,000; Ohio, 814,000; Wisconsin, 1,135,000; Texas, 5,022,000.

Whether this difference in the average price for range and farm fed cattle is to be accounted for by a difference in weight or quality, or both, does not concern us at the present moment. It is quite possible that Wyoming is furnishing a better grade and a heavier weight of cattle than Wisconsin, but that is not the point under discussion. We are dealing at present with numbers only and with the very important fact that the passing of the range has, indeed, affected the cattle situation, but decidedly for the better. All statistics bearing on this point prove this over and over again.

Thus, one after another, the "arguments" that generally accompany the claim that there is an alarming scarcity of cattle and which are given as ancillary reasons for the high prices of all meats fall to the ground.

7. ARE WE KILLING TOO MANY CALVES?

In the effort of the packers and interested parties to prove that there is a shortage of cattle, in their endeavor to explain why the prices of meats are high, and their attempt to justify a still further increase in meat prices, much emphasis is placed on the slaughter of calves. We are told that we eat too much veal. Mr. Spoor, previously quoted, declared that "the slaughter of calves increased 600 per cent in the last 10 years." Others more conservative place the increase in calf slaughter anywhere from 100 to 400 per cent.

Neither Mr. Spoor nor any of the writers who have touched upon the item of calf slaughter advance any figures to prove that there has been a great percentage of increase in calf slaughter. They content themselves with simply making the statement; to adduce proof seems beneath them. There are no separate statistics on the total calf slaughter for the United States; if the packers have such statistics they have not been made public; they do not even appear in the Price Current Annual. The only data we have concerning calf slaughter are those for federally inspected cattle at the principal packing plants. These would seem to indicate that there is a falling off rather than an increase in calf slaughter. Thus in 1909 the packers killed 2,504,728 calves; in 1911 only 2,219,908.

In the absence of complete and authentic statistics on the subject we may seriously question not only the accuracy but also the trustworthiness of the computation and deductions of the persons who claim that the calf slaughter has increased anywhere from 100 to 600 per cent. There are so many things that seem to give the lie to the cry about enormous calf slaughter.

In the first place, if the calf slaughter were abnormally high, the decline in cattle production would be greater than it is; whereas, as a matter of fact, milch cows are more numerous than formerly. In the second place, an increase in the number of calves slaughtered does not necessarily raise the percentage of slaughter, for it must be remembered we are raising considerably more cattle than we did 10 or 15 years ago; consequently we can, without disturbing the equilibrium or the proportion, kill considersbly more calves.

The few known facts about calf slaughter lead me to believe that it is not excessive and not disproportionate. The only year for which reliable statistics concerning total calf slaughter are available are for the year 1909. The total slaughter of calves in 1909 was 6,500,562. Of this number only 2,504,728, or 38.53 per cent of the total, were killed by the wholesale slaughterers or packers (44.07 per cent was retail and commercial slaughter and 17.40 per cent was farm slaughter).

The total number of calves born during 1909 was 18,164,447. Consequently we might say that approximately for every calf killed two were kept alive. I am not aware that this is an alarming proportion. Please observe that the wholesale packers alone have been aggressive in pointing out that we are slaughtering too many calves; yet how can they logically do this, considering that in 1909 their killing amounted to only one calf out of every eight or nine born. Of the total number of calves killed in 1909 the wholesale slaughterers and packers killed only 38.53 per cent, yet they are doing 100 per cent of the calamity howling concerning the slaughter of calves.

It may not be uninteresting to note here that Representative FRED H. BRITTEN, of Chicago, on September 8, 1913, introduced a bill in Congress seeking to prohibit "the killing and interstate shipment for slaughter of beef cattle under 2 years of age." Congressman BRITTEN had prepared a lengthy speech on the subject, which gave him a splendid opportunity to repeat all the statements and statistics to again prove to the public that there is an alarming scarcity of cattle, and that if it continues porterhouse steak will cost $1 a pound by 1923.

Nothing came of the bill, but some of Mr. BRITTEN'S pessimistic utterances were published in the daily press. Here are a few:

"The beef supply of the future is being so alarmingly curtailed as to become a distinct menace. * * * The number of calves slaughtered has increased 100 per cent in the last 10 years. There were 51,500,000 head of cattle in this country January 1, 1907, while at the beginning of the present year there were but 36,000,000. In these figures it is easy to see the effect the enormous slaughter of calves has had upon the beef industry of the United States," etc.

If we are killing so many more calves than formerly, an excessive number, this should have the effect of considerably lowering the price of veal, but no such phenomenon is observable.

If the packers are really worried about any excessive calf slaughter, they have the remedy in their own hands. Let them offer the producer 2 cents a pound for calves and fix the price of veal at $2 a pound. This will effectually stop calf slaughter and veal consumption.

8. THE DECLINE IN CATTLE AND MEAT EXPORTS.

Beyond a doubt there has been a marked decrease in our cattle and meat exports within recent years, but not owing to any scarcity of cattle. There are other causes that have produced this result; scarcity of cattle is not one of them. In corroboration of my contention I point to the statistics. These show conclusively that production and exports are unrelated. Thus, for example:

In 1900, when our cattle numbered 43,903,414 head, we exported 397,286 head of cattle and 434,258,032 pounds of canned, fresh, salted, pickled, and other cured beef meats.

Whereas in 1907 (the year of biggest production), when our cattle numbered 72,533,996 head, we exported only 423,051 head of cattle and 361,159,919 pounds of beef meats.

In other words, in the year of smallest production our volume of export of both cattle and beef meats was not only as great but proportionally greater than in the year of maximum production, proving conclusively that there is no relation whatever between production and exports. If you care to go over the whole list of statistics, not only for cattle and meats, but for all food products, and compare them year for year, you will find this fact illustrated over and over again.

Consequently to attempt to explain the decline in our cattle and meat exportations to the somewhat smaller volume of production of the past few years is illogical, unfair, and unscientific.

But has the decline in our exports of cattle and beef meats been really so tremendous? Let us institute an inquiry. The statistics show that the average number of head of cattle exported annually, when computed in periods of 5 years for the last 25 years, was as follows:

Cattle exported.

1886–1890	144,934
1891–1895	349,476
1896–1900	398,136
1901–1905	483,099
1906–1910	340,694

A moment's study of these figures will show that our cattle exports were greater for 1901–1905 than during the next five years, although the aggregate cattle production was greater during the latter period.

The average number of pounds of canned, fresh, salted, pickled, and other cured beef meats exported during the last 16 years, computed in periods of four years, yield the following yearly average:

	Pounds.
1897–1900	393,169,228
1901–1904	419,787,332
1905–1908	351,649,523
1909–1912	107,189,665

In connection with these results it is to be observed here that if the volume of exports is dependent upon volume of production the maximum limit would have been reached between 1905 and 1908, but such was obviously not the case.

The figures for beef meats exported during the last four years, 1909–1912, certainly show a marked decline. But as stated before, it can not be explained by a decrease in the volume of cattle production. We must look for the underlying causes elsewhere, and we need not search long to find them. I will state the two principal causes for the decline:

1. Consumption of meats abroad has fallen off considerably.
2. The foreign supply is obtained elsewhere.

In reference to the first cause: For nearly every country our consuls report that, "the laboring classes have to abstain from all but the cheapest kind of food." An examination of the Daily Consular and Trade Reports for 1913 will most emphatically establish the fact that meat eating in all the foreign countries has greatly declined.

Thus from the Daily Consular and Trade Reports of March 5, 1913 (No. 52, p. 1112), we learn that in England "the advance in retail prices of food continued throughout the year, and the index number for the year was 5.1 per cent higher than for 1911, being the greatest increase in any year since statistics on the subject have been kept. There was an increase in the prices of 1912 of 14.9 per cent as compared with 1900," etc.

From the Daily Consular and Trade Reports of June 18, 1913 (No. 141, p. 1428), we learn that in Germany "an advance in the prices of meat made itself keenly felt. Pork attained the highest average recorded in four years, and beef, veal, and mutton were all more costly than in 1911. Meat prices reached such a level around the middle of the year that the fear was seriously entertained that the masses could not provide themselves with sufficient nutrition, and the Government was moved to a relief measure by which the larger cities were permitted to import foreign meats under reduced import duties," etc.

Under these world-wide conditions so unfavorable to an expansion of trade, the falling off of our exports (meats as well as other products) is not anomalous, for the volume of exports necessarily contracts in the same proportion that the power of the people to purchase diminishes.

In reference to the second cause: Foreign countries importing cattle and meats are drawing their supply from other sources, notably South America. In this connection I desire to call attention to a few statistics concerning Argentine cattle and meats given in Price Current Annual for 1914. From these we learn that the slaughtering of cows, steers, and calves was as follows (the figures for calves are for 1911; no figures for 1912 are given):

	Cows.	Steers.	Calves.
1904	359,367	988,811	108,454
1912	1,155,985	2,225,497	340,158

Please note the tremendous increase.

Argentine exports of live cattle increased from 129,275 head in 1904 to 261,416 head in 1912. Exports of beef increased from 215,489,000 pounds in 1904 to 755,849,315 pounds in 1912. Draw your own conclusions.

Moreover, the zenith of our export trade for cattle meats, as well as other articles of food and merchandise, must be reached some time. There is a limit beyond which we can not go. Our exports can not expand indefinitely; they can not increase at a fixed percentage year after year. That is quite clear.

Whatever interpretation you may read into the item "exports of cattle and beef meats," one thing is quite certain, that you can not explain the observable falling off in volume by saying that there is a scarcity of cattle. All known statistics show the futility of any such attempt.

9. JUST A FEW WORDS ABOUT MEAT PRICES.

Not one of the several "arguments" advanced to prove that there is a scarcity of cattle is sound. I have shown that the average per capita cattle production is not only as great as ever but greater, and that the supply is altogether normal. I have shown that the increase in production has been greater than the increase in population. I have shown that the much-lamented passing of the range has affected the aggregate cattle situation for better, not for worse. I have shown the growth in the slaughtering and meat-packing industry and that the percentage of growth has been greater than the percentage of increase in population. I hold that we are not killing an undue proportion of calves, and that the decline in our cattle and beef exports can be explained by perfectly natural causes—causes that have nothing whatever to do with the fabled cattle shortage. In short, there is no "gaunt specter of a beef famine staring us in the face."

In view of all these things, the consumer may well ask, "Then why are meat prices so high?"

In answer one and only one legitimate explanation can be offered, and that is that the packers are paying a higher price for cattle now than in former years. And this, indeed, was the reason given for the advance in meat prices until some one discovered that there was an alarming "scarcity" of cattle. Then the old explanation was dropped. It was high time, too, for the farmer was beginning to get on his ear; was getting tired of being blamed for the outrageously high meat prices.

There is no doubt whatever that stock raisers are receiving better prices than they did, say, 15 years ago; and, indeed, I believe that the packers are quite willing to pay a better price. Why shouldn't they, since the increase comes not out of their pocket but out of the purse of the consumer? If the packers had not been willing to pay higher prices for the cattle—scarcity or no scarcity—they could not have raised the prices of meats. The farmer—that is, the producer—would have been the first to protest against an increase of prices in which he did not share, and the consumer would have put the entire blame on the packers; and the packers would have been unable to put up a plausible defense.

How much more are the packers paying for cattle than in former years? What are the average prices paid for cattle? Let us not guess or theorize on this very important point, for we have the packers' own reports to settle this question authoritatively.

You will find them in the Price Current Annual for 1914, on page 11, where the "yearly average prices at Chicago of native beef steers, fat cows, and heifers per hundred pounds, as stated by Drover's Journal," are given:

	Steers.	Cows.
1901	$5.25	$4.05
1902	6.20	4.70
1903	4.80	3.95
1904	4.95	3.55
1905	5.05	3.65
1906	5.30	3.70
1907	5.80	3.85
1908	6.10	4.10
1909	6.35	4.25
1910	6.80	4.60
1911	6.40	4.35
1912	8.40	5.25
1913	8.25	6.10
Average	6.11	4.31

Let these figures speak for themselves. I will not make any further comment on them than to say that they prove beyond a doubt that a higher price is being paid for the various kinds of cattle. Of course, if we could know just why the average price of steers jumped 2 whole cents in one year, i. e., from $6.40 per hundred pounds in 1911 to $8.40 in 1912, it would no doubt be illuminating. But this knowledge is not essential to our inquiry. The big fact is that there has been an increase of several cents per pound. Let us liberally say that cattle prices have advanced an average of 2½ cents a pound.

But the increase to the consumer has been from three to eight times 2½ cents per pound—that is to say, there has been, as every consumer knows, an increase of from 8 to 20 cents a pound for beef meats.

Why? I neither know nor can I understand why there should be so tremendous a difference between the increase in prices of cattle and the increase in the prices of meats. It is a mystery not exactly unfathomable, but beyond the comprehension of the average man and woman.

The packers claim that there is no profit in meats—that if it were not for the by-products they would have to go out of business. One can not help but wonder how the butchers of 30 or 40 or 50 years ago—in the days when no by-products were utilized and the prices of meats only about half of what they are to-day—managed to exist.

One of the Chicago packing firms inserts a 4-line weekly advertisement in the dailies of the country informing the readers what the average price of beef netted them.

Thus in a recent item we are told that the sales of beef—domestic—in Chicago for the week ending June 27 averaged 11.67 cents per pound.

These articles must not be construed as an attack on the packers. The whole purpose of this series is to discover the truth and find the remedy. But since the packers are the big controlling force of both the cattle and meat situation we must turn to them for explanation and relief.

I have recently examined thousands of invoices of several retail meat dealers for a period covering 10 years and found that the wholesale prices of beef rose gradually—one-eight or a quarter of a cent at a time—from $4.75 per hundred pounds to $14.50 per hundred pounds. This rise of nearly 10 cents per pound in prices asked of the retail dealer can not be satisfactorily explained. Certainly it is not justified by any advance in the price of cattle.

Remember that the average increase in the price of cattle has been less than 3 cents per pound. This constitutes an increase of, let us say liberally, 100 per cent over former cattle prices. The wholesale price of beef has advanced from 6 to 10 cents per pound; let us say, in round numbers, that the retail dealer is paying 100 per cent more for meats than in former times—in reality he is paying at present approximately 200 per cent higher prices. Now, it is not unnatural that the retail dealer under the circumstances has raised his prices to the consumer 100 per cent. In other words, the consumer is compelled to pay at least three separate 100 per cent increases—and this is the real explanation why the prices of meats are so high. The high prices the retail dealers are charging are the direct result of the considerably higher prices demanded by the wholesale dealers.

It is clear that a tremendous mistake in arithmetic has been made by packers and retail dealers, and the packers are to blame. It must be remembered that the cry "scarcity of cattle" was raised and given world-wide currency by the packers. The organized packers, not the retail meat dealers, are predicting that in another 10 years "porterhouse steak at a dollar a pound retail will be cheap."

The crux of the whole matter is that the maximum slaughter per capita of cattle and calves, as well as other animals, measured by the consumer's ability to purchase volume was reached a dozen or so years ago. Under prevailing conditions of limited incomes that are not likely to become enlarged materially the former maximum consumption can not be maintained, and certainly not increased. Hence the necessity for higher prices in order to maintain and increase the former volume of profits.

10. THE LAW OF SUPPLY AND DEMAND AND THE CONSUMER.

There is a wonderful and mysterious law in economics called the law of supply and demand, whose special function seems to be to give a series of jolts to the consumer. Personally, I hold that "there ain't no such thing" as a "law" of supply and demand; but for the purpose of this article I will accept it as popularly employed, insisting only that it is not of divine origin.

The law of supply and demand can not be urged in explanation of the high prices. As far as the cattle and meat situation is concerned, there is not only one "law" of supply and demand, but two:

1. The "law" of supply and demand as regards the quantity of cattle raised on the farms and ranges.

2. The "law" of supply and demand as regards the quantity of cattle offered in the market.

From the joint operation of these two "laws" there is no escape for the consumer; they are the millstones between which the contents of his purse are being ground to powder. Let us take a look at the operation of these two "laws."

The supply of cattle on the farms and ranges, we have been told rather insistently within recent years, is insufficient for the national requirements. Of course it isn't, but we have been told this so often that millions of people believe it; or, at least, they can not refute it, and so they have accepted it as the complete explanation as to why the prices of all kinds of meats are so high.

We have seen in a previous article that the packers are paying an average of less than 3 cents a pound more for cattle than in former years. This increase, however, as the statistics amply show, was not the result of any dearth in the supply of cattle. As a matter of fact, the increase in prices for cattle began at a time when cattle production was decidedly on the increase. If, for example, the price of cattle were regulated by the supply on the farms and ranges, the price should have been lowest in 1907.

A careful analysis of data pertaining to cattle production and prices paid in the market demonstrates that there is absolutely no connection between the price of cattle and the visible supply. Consequently, the law of supply and demand can not be urged in explanation of the higher prices. Did anyone notice that meat prices were low in 1907—the year of greatest production?

And is anyone so unsophisticated as to imagine that even though the supply of cattle on the farms and ranges were excessive, let us say double the present amount, that he could escape the operation of the second law, viz, supply and demand in the market?

If you have ever studied the cattle market reports in your daily paper you must have observed this one thing, that the maximum or minimum market price for cattle is not based upon the supply on the farms and ranges, but upon the quantity offered in the market. This quantity can be, and indeed is, regulated. But let us ignore this for the present, and say that it fluctuates naturally from day to day. Thus there are times when for uncontrollable reasons, such as drought in one or the other State, the amount of cattle offered considerably enlarges the market supply. Then, too, weather conditions and other considerations sometimes naturally increase or lessen the so-called normal offerings.

Market prices fluctuate indeed, but not markedly. The fluctuation seems to be from 10 cents to 75 cents per hundred above or below the fixed standard market price. Anyone of several natural or artificial causes can produce either a fall or rise in quotations. The thing to be emphasized here is that a rise in price generally applies to only a comparatively small quantity of the better grades of cattle; it does not include all grades of cattle. In other words, quality rather than supply is the fundamental factor employed to produce mercurial quotations in the market. And it is this somewhat higher price paid for a small quantity of better quality that still further increases the price for all meats. The "law" of supply and demand has nothing whatever to do with it.

Now, the question is this: Why should the consumer be penalized because on four or five days in a given month the market offerings happen to be slightly below what is considered normal? Why should the whole Nation be made to pay a penalty all through the year because there are 40 or 50 days in a year when a perfectly natural market condition prevails in five or six cities? And why should the whole 100 per cent of the population be penalized for the full 100 per cent of meats, although the packers handle annually only about 50 per cent of the country's cattle slaughtering? Why? That is the question.

The answer is simple enough. The market prices of cattle, as well as the prices of meat, are arbitrarily fixed regardless of supply of cattle on the farms or ranges or that offered in the market.

The additional increase that the packers are paying for cattle over prices of a decade or two ago was not, as previously seen, forced by any condition in the cattle situation on the farms and ranges. Consequently it must be considered more in the nature of a voluntary offering, a highly profitable investment for the packers. As a result of this increase in cattle prices, the packers have been enabled to do some wonderful things. Not only have they conciliated the cattle raiser, and incidentally silenced the complaining consumer by repeatedly telling him of this increase; what is more important here is that they have created a situation that is equivalent to a practical cornering of the Nation's cattle supply. I will state my point as briefly as possible.

We have seen that the wholesale packers handle less than 50 per cent of the annual slaughter of cattle and calves. Yet they dominate the entire cattle and meat situation, practically dictating the prices for the full 100 per cent, and all by the simple process of paying a few cents more than formerly for cattle. As a result they have, in effect, a perpetual, nation-wide option on all the cattle in the country. The local butcher—and I am now referring in particular to the still fairly numerous butchers in the small towns—can obtain only what the cattle producer is willing to let him have, and that at the prices quoted in the Chicago market, or, all things considered, at prices equally favorable to the producer.

Hence we find the local butcher in the rather awkward position of being surrounded by ample supply, yet compelled to pay prices fixed by persons who can not possibly be interested in him or his welfare. Consequently it is not on account of scarcity of cattle or limited supply that the local butcher is finding it increasingly more difficult, not only to purchase his necessary supply but also to cope with existing conditions. Add to this the fact that he can not, like his competitor—the big packer—utilize the waste, and it is not difficult to foresee that the small butcher will in course of time entirely disappear from the field and that the big packers will naturally dominate the entire situation.

I am not projecting a vision; I am telling of events now actually transpiring, events as I had opportunity to observe them in a half a dozen States. I estimate that the work of crowding out the local butcher will be completed by A. D. 1923. This, you will recall, is the year when we have been told that "porterhouse will cost $1 a pound retail."

The "law" of supply and demand. What a wonderful, mysterious "law." It is the dust thrown into the eyes of the consumer. It is the cloak under which a multitude of sins is committed.

11. THE LESSON OF 1909.

The Bureau of Animal Industry, in its twenty-eighth report, says: "The data gathered in connection with the last decennial census (1910) make it possible for the first time to present complete statistics of a year's slaughter and consumption of food animals in the United States, based on definite information."

The data are for the year 1909. The report is most interesting and illuminating. From it we glean some valuable information bearing on the cattle and beef-meat situation. Thus we learn that the total num-

ber of head of cattle slaughtered in 1909 in the United States was 13,628,875, divided as follows:

	Head of cattle.
Wholesale slaughter and packing	8,114,640
Retail and commercial slaughter	4,159,375
Farm slaughter	1,408,640

Consequently wholesale slaughter and packing was 59.31 per cent; retail and commercial slaughter, 30.40 per cent; and farm slaughter, 10.29 per cent.

	Calves.
Wholesale slaughter and packing	2,504,728
Retail and commercial slaughter	2,864,234
Farm slaughter	1,131,600

Consequently wholesale slaughter and packing of calves was 38.53 per cent; retail and commercial slaughter, 44.07 per cent; farm slaughter, 17.40 per cent.

It will, no doubt, surprise some to learn that the wholesale packers kill less that 60 per cent of the cattle and less than 39 per cent of the calves, or less than 50 per cent of a year's total slaughter of cattle and calves.

The report for 1909, when analyzed, permits of some most interesting correlations of statistics and some most conclusive deductions.

Thus, when we remember that the number of cattle and calves alive and on foot January 1, 1909, was 71,099,000, and that the year's slaughter of cattle and calves totaled 20,183,447, leaving a balance alive and on foot at the end of the year of 50,915,553, we observe that we kept alive about 2½ head for every head killed—this is, of course, exclusive of births. And the question arises: Is this a disastrous proportion? Let those who feel competent to do so answer.

And when we remember that the number of cattle and calves alive and on foot January 1, 1910, was not 50,915,553, as above indicated, but 69,080,000, as the published statistics show, we can readily compute that 18,164,447 calves were born during the year 1909. From this we derive the great satisfaction of knowing that the total visible supply of cattle and calves for the year 1909 was not 71,099,000 head but 89,263,447 head, yielding an actual supply of 0.985 head per capita, or 4.925 per family.

The slaughter was 0.223 head per capita, or 1.115 per family.

Is that an alarming situation? Who will answer this question in the affirmative?

It is at this point that I desire to reiterate how tremendously fallacious and altogether misleading it is to estimate the cattle situation from the single item "stock on hand." I protest most emphatically: It is not fair. And the proper governmental authorities should call a halt. No true estimate of the actual cattle situation can be obtained from the statistics showing the number of cattle on foot January 1 of the various years. Any calculations based on them are bound to be misleading. But, worst of all, the public is paying a tremendous price for these deliberate miscalculations.

It is rather singular that from the same set of statistics from which the packers' Jeremiahs have figured that there is an alarming scarcity of cattle, I have been able to compute that there is a healthy abundance. True, the old proverb tells us, "As the statist thinks the bell clinks"; and we know that there are those who, for what reason I do not care to analyze at this moment, are desirous to give the worst possible interpretation of the cattle situation. But the time has come when such raw methods at statistical perversion must cease.

Carlyle has reminded us that "a judicious man looks at statistics not to gain knowledge, but so as not to have ignorance foisted on him." Ignorance, nay, worse than ignorance, has been assiduously foisted upon us. The average man and woman has not the time to inquire deeply into the subject, nor have they the statistics at hand that would enable them to discover the truth for themselves. For this reason I have gone to the trouble of examining, computing, comparing, correlating the various sets of statistics bearing on the cattle and meat situation, and the results are herewith given in the hope that the information will help the Nation to thrust off the load of "ignorance" that has been foisted upon it on account of the preposterous claim that there is a sarcity of cattle and that "the gaunt specter of a beef famine is staring us in the face."

12. THE NECESSARY DECLINE IN MEAT CONSUMPTION.

It can not be established by any legitimate process of computation that there is an alarming scarcity, or even a scarcity, of cattle in this country. On the contrary, all the various sets of statistics, considered separately or correlated, proclaim that the supply of cattle is not only adequate and normal but even greater than in former decades.

'But let us by a tremendous stretch of the imagination assume for a moment that there is a scarcity of cattle—a decided shortage and an alarming decline in production. This condition would be more than offset by the fact that the high cost of living has cut the ability to purchase volume practically in half. The dollar of to-day purchases only about half the quantity of meat that it could purchase 15 years ago.

In a general way the meat consumers in the United States may broadly be divided into two classes: 1. Those who eat as much meat as formerly, paying double the former prices for the same quantity. 2. Those who spend as much as formerly, receiving only half the former quantity for their money.

Here are a few simple statistics that will help us to better comprehend the situation:

The population of the United States in round numbers is 100,000,000.

There are approximately 20,000,000 families.

Over 50 per cent of the families have an income of less than $500 a year.

Less than 3 per cent of the families have an income in excess of $2,000 a year.

The balance have an income between $500 and $2,000.

The average income per family in the United States is $800. (This is inclusive of all increases in wages and salaries up to date.)

Statistics recently published by the Department of Labor show that the retail prices of meats were higher in 1913 than at any other time during the last 23 years. On August 15, 1913, prices as compared with the average cost between 1890 and 1900 show the following increases for a few items of meat: Bacon increased 139 per cent; pork chops, 124 per cent; round steak, 108.4 per cent; smoked ham, 92 per cent; sirloin steak, 79.3 per cent; rib roast, 76.5 per cent; lard, 69.8 per cent. The general average of increase for all meat would probably exceed 100 per cent.

With these data before you it is not difficult to understand that the average family, or rather the aggregate people, can not purchase as much quantity as in former years. Their ability to purchase a maximum quantity was reached a dozen or so year ago. Their limited and inelastic income precludes the possibility of purchasing as great a quantity as formerly. The per capita consumption of meats has necessarily declined not on account of any scarcity of cattle but on account of prohibitive prices.

Hitherto in these articles I have confined myself exclusively to a consideration of the cattle and beef meats situation. It becomes necessary, however at this moment to depart a moment from this rule. The twenty-eighth annual report informs us that the per capita consumption (or rather slaughter) of all kinds of meats in 1909 was as follows:

Per capita consumption, or rather slaughter, of all kinds of meats in 1909.

	Pounds.
Beef	80.34
Veal	7.54
Pork	67.61
Sheep	6.58
Goat	.13
Total	162.20
Lard	10.06

Since we may approximately figure five persons to a family, we obtain the following results per family: Beef, 401.70 pounds; veal, 37.70 pounds; pork, 338.05 pounds; mutton, 32.90 pounds; goat meat, 0.65 pounds; total, 813 pounds. Lard, 50.30 pounds.

It will not be difficult for each family to determine whether or not the constituent members consume their full per capita quota. Let them remember, however, that poultry, fowl, fish, game, etc., are not included in the above 813 pounds.

Those "expert" statisticians, who by basing their calculation on the "stock on hand" item have erroneously computed that the number of beef cattle has decreased by 32 per cent in the last decade, lay great stress on the fact that in the same period the population has increased 21 per cent. But they fail to add that most of the increase was the result of immigration and births among the poorer class—the class that, as far as I have been able to discover, does not, for obvious reasons, consume its per capita allotment of meats. (Immigration during the decade of 1900 to 1909 was 8,204,879 persons—over one-half of the increase of population in that decade.)

In a small way I recently collected data concerning per capita meat consumption. I have reports from 20 different States covering about 400 families whose annual incomes range from $8 to $30 a week. I requested each family to keep account of prices, quantity, and kinds of meat consumed in a calendar month. The information thus obtained corroborated the views I had previously held, that the actual per capita consumption in the average family falls considerably below the per capita allotment as reported by the Government figures for 1907. While I do not consider my private statistics as scientifically conclusive or as applicable to the whole population; nevertheless I believe that the results shown hold good for all the families having an income of less than $1,500 a year. In the private statistics I have computed, the per capita consumption of meats is a trifle less than 10 pounds a month, or about 120 pounds a year, hence about 210 pounds less per family than the statistical quota.

But if any be tempted to treat the statistics I have gathered, or my computations and deductions therefrom, with contempt, I refer them to an investigation made by the Government some years ago to ascertain the "Conditions of living among the poor." The result of this investigation was published in the bulletin of the Bureau of Labor—No. 64, May 10, 1906, pages 593 to 698.

The investigation included 19 families composed of 123 persons. Incomes ranged from $7 a week to $3 a day. In five weeks these 19 families purchased $142.42 worth of meats. According to the quota of the Twenty-eighth Annual Report of the Bureau of Animal Industry they were entitled to 26,923 pounds for the year. Draw your own conclusions.

13. SOME THINGS THAT MUST BE EXPLAINED.

It is rather remarkable that the packer prophets of evil days to come are at the present time confining their jeremiads exclusively to the shortage of cattle situation. But this supposed cattle shortage does not explain the excessively high prices of pork, mutton—in fact, all kinds of meat. Surely they do not pretend that there is also a scarcity of hogs and sheep.

Ham and bacon are more expensive than spring chicken or turkey. Think of it, the retail price of ham and bacon 35 cents a pound!

Pigs' feet (perhaps my taste is plebian, but I'm fond of pigs' feet if properly cooked and pickled), 75 cents per dozen, and not so much as a vestige of the shank. And yet 15 or 20 years ago I bought them for 20 cents a dozen, and a fair portion of the shank. Why this tremendous advance? Explain it if you can. I can't.

Perhaps a little incident from life will throw a ray of light on the situation. I have traveled through several of the Western States a half a dozen times within the past six or eight years and have many friends among the farmers and cattle raisers and dealers. A stockman told me the following:

"A few years ago the hog market was flooded; the packers had bought and killed an excessive quantity. Their cellars were full; large quantities had to be temporarily stored in sheds and even on the pavement. (This, of course, was in winter.) I had eight or nine carloads of hogs to sell. I went to one of the packers and offered him the lot.

"'Don't want them,' he said. 'Have so much meat on hand I can't take care of any more.'

"I wanted to get rid of them; I needed the money; the packer knew it. He offered me 4½ cents for the lot; fine hogs they were, too. I sold them at that price.

"I have a large family and always butcher three or four hogs a season, but I concluded that under the circumstances it would be cheaper to buy pork than to kill my usual quota. After I had unloaded my hogs I went to the office to get my money.

"'What will you charge me for a hundred pounds of bacon?' I asked of the same man to whom I had sold the hogs.

"'Well, we are a little short on bacon just now. I couldn't let you have it for less than 22 cents a pound.'"

Is any comment needed?

Beyond a doubt, provable by an avalanche of data and statistics, the hogs and sheep situation is even more satisfactory than the cattle situation. At any rate, there is no "scarcity" of either. Then, why are prices so high A patient and long-suffering public is hungry for a satisfactory answer. Who will give it?

I have studiously avoided touching points in these articles, not immediately connected with the cattle and beef meat situation, but it seems desirable at this moment to mention a few allied points that will help us to obtain a focus on the crux of the situation.

The National Provisioner, in its recent editorial entitled "Supply and demand," said, among other things: "The packer, visualized to the newspaper-reading public as the 'infamous Beef Trust,' is made to bear the burden of odium for the heavy tax on the meat-eater's pocketbook. If meat is a luxury now, what would it be without the economies and advantages of the modern packing house? The average diet would be sowbelly and salt beef."

When I was a boy there were no "modern packing houses." The small butcher was a fixed institution in the community in which I lived. But I don't remember ever to have eaten what the National Provisioner disparagingly calls "sowbelly" or "salt beef." If we have other meats than these two elemental varieties, they are not the invention of the modern packing house. But that is not the point I wish to discuss. I wish merely to say that the "economies and advantages of the modern packing house" have not accrued to the benefit of the consumer's purse.

Two or three decades ago the average price for cattle—to say nothing of hogs and sheep at this time—was 2½ to 3 cents less than at present. In those days beef meats were sold for one-half the prices charged at the present day; in other words, the dollar that will buy three pounds of a certain kind of meat bought six pounds then. And in those days, be it remembered, there was much waste—by-products were practically unknown. How do you explain the tremendous advance in meat prices over the prices of 20 or 30 years ago?

The "economies" of the modern packing house have been a rather costly item as far as the consumer is concerned. The utilization of what was formerly wasted alone could have offset the necessity for raising the price of meat on account of the 2½ to 3 cent advance in the price of cattle. These are some things that need a lot of explaining.

The packers are on record as saying that they make absolutely no profit on their meats, that all their profits are derived from their by-products. This claim is really too disingenuous to merit lengthy comment. But if the small butcher of three or four decades ago, killing 10 or 12 hogs or 3 or 4 head of cattle and several calves, a week, and using none of the by-products, could sell his meats at half the present prices and yet make a profit sufficient to raise his family decently and lay aside a few dollars against the proverbial rainy day, then the vaunted "economies" of the "modern packing house," with its improved methods and supposed greater efficiency, deserve to be called by some other and a harsher name.

I have no desire to embarrass the men who own and control our modern packing houses, but when I remember that the consumer is being put to the necessity of reaching deeper and deeper into his purse for the meats he purchases, I feel that these gentlemen could explain many things concerning which they have hitherto preserved a rather stoical silence. The list of questions to which a speedy and effective answer is desired is daily growing longer.

14. THE SITUATION REVIEWED.

In my discussion of the cattle and beef-meat situation I have touched only the high spots, studiously avoiding everything not immediately relevant to the questions involved. Had I attempted to treat the subject in its entirety, overlooking nothing, however seemingly trivial, it would have required a vast array of statistics, and the series would have extended over a period of months. I feel, however, that I have given you a fairly complete compendium of the situation and enough data and statistics to enable you to make intelligent comparisons. A brief review of the principal points treated will help you to fix them firmly in your mind.

Those who claim that there is an alarming scarcity of cattle have not proven it. The statistics they have used in the attempt are incomplete and distorted. The method they have employed is both unfair and unscientific.

If there is an alarming scarcity of cattle, we have a right to ask, When did the "scarcity" begin? And it is important that this question be definitely answered. One thing is established beyond doubt, and that is that meat prices ascended as our cattle supply increased.

If the present supply is insufficient, when did it cease to be adequate; when did production fall below normal? Unless this question can be answered authoritatively, it is clear that no one has a right to say that there is an alarming scarcity of cattle. If there is a scarcity of cattle, how can the increase in the slaughtering industry be explained? If there is a scarcity of raw material, how can the increase in equipment, with the resultant "greater efficiency," be explained?

The ancillary "arguments" generally accompanying the claim that there is an alarming scarcity of cattle are unsound.

1. The increase in cattle production has been almost universally greater than the increase in population. The statistics, fairly computed, prove this beyond peradventure of a doubt.

2. The passing of the range has not been disastrous to the cattle industry, for the statistics show that as the ranges began to disappear the farms increased cattle production. The few thousand ranchmen raising cattle on a fairly huge scale were followed by a million producers on a small scale, the aggregate production became larger.

3. It can not be proven that we are killing too many calves. The present ratio is one killed out of three born. There is no way in which it can be estimated whether this proportion is injurious to the cattle industry, since no comparisons with definite statistics are possible. Numerically we are perhaps killing more calves than formerly; quite naturally, for we are raising more cattle; but it can not be proved that there has been an increase either in the percentage of calf slaughter or in the ratio to cattle slaughter. Furthermore, the considerably greater number of milch cows would seem to argue an increase in births of calves, consequently an increase in cattle production. Fewer calves were killed in 1911 than in 1909. The packers kill only one out of every eight or nine calves born in a year.

4. The decline in cattle and meat exports proves nothing as regards cattle or meat production and exports. As our cattle production increased our volume of exports of cattle and meats decreased. The decline in exports can easily be explained by the fact that decline in consumption is world-wide.

A still more significant factor explaining the falling off of cattle and meat exports is the growth of both industries in South America. The American consumer is not benefited in the slightest degree by a large volume of exports; on the contrary, he is penalized, for every pound of meat exported is withdrawn from the home market, and consequently reduces the supply and increases the prices of meats.

The simple truth is that there is no scarcity. The calamitous cry of the packers is based entirely on the statistics for "stock on hand" at the end of the year after the year's slaughter has been deducted. These statistics do not give a fair idea of the actual cattle supply, and it is not permissible to employ them for the purpose of proving a scarcity. But if they are employed to show that there has been a decline it is dishonest not to emphasize the fact that the decline necessarily followed the year of maximum production in 1907. It is dishonest, too, not to emphasize the fact that cattle production jumped from 43,903,414 head in 1900 to 72,533,996 head in 1907, a tremendous increase of nearly 29,000,000 head, or an average increase of over 4,000,000 head a year. As a bit of interesting cattle history at this point let it be remembered that the increase in cattle production rose from 23,820,608 in 1870 to 54,067,590 in 1892, and that the average increase for these 22 years was only 1,375,000 a year, or about one-third as great as for the 7 years from 1900 to 1907. Only one who is a deliberate pessimist, or something worse, can read calamity into the cattle situation as shown by the statistics pertaining to "stock on hand." The decline observable is bringing us nearer to a normal basis of supply—that is all that the "decline" signifies.

The only complete statistics we have for the calf and cattle slaughter and meat production are for the year 1909. The total cattle supply in that year was equivalent to nearly 1 head per capita, or nearly 5 head per family. The total slaughter of the country was only about one-fourth of the year's supply—certainly a healthy situation; certainly nothing to be alarmed about.

There is no reason whatever for the prevailing high prices of meats. The packers' declaration that prices will go still higher can not be justified; their prediction that the maximum retail price will be reached by 1923 is a prophecy of evil intent, nothing more.

The packers are paying an average increase of less than 3 cents a pound for the better grades of cattle, but the prices for all grades of meats have advanced from 8 to 20 cents a pound to the consumer. Why? God and the packers know, but nobody else. Not a single reason or argument can be advanced in justification. It is significant, though, that while the wholesale packers slaughter less than 50 per cent of calves and cattle, they have been doing 100 per cent of the calamity howling.

But even granting for a moment that there is an alarming scarcity of cattle—which is absurd—this "scarcity" would be more than offset by the fact that the purchasing power of the dollar has been practically cut in half as regards meats. The per family quota of meats for 1909 was 831 pounds. This does not include poultry, fowl, or fish. There are no doubt some families who consume more than their quota, but by far the vast majority are consuming less; a conclusion not at all exaggerated when we consider that one-half of the families in the United States must necessarily live on less than $500 a year and that the average income for all the families in the United States is $800 a year. I assert that both here and abroad meat consumption is steadily falling off and is bound to contract still further as prices ascend.

Scarcity of cattle? Those who say this can not prove it. But, taking them at their word, let us devise a remedy—an effective and a saving remedy.

15. A SIMPLE AND EFFECTIVE REMEDY.

The cattle situation is most satisfactory, but the beef-meat situation is not. However, we will meet the packer pessimists on their own ground. If they prefer to take a gloomy view of conditions as they are, we shall be put to the necessity of giving some kind of relief, applying, as it were, a remedy to help them out of their dilemma.

Importation of beef from Argentina has proven ineffective, thus verifying the packers' predictions that meat importations will not lower the prices of meats. Almost before the first shipment of beef was received in the United States the National Provisioner, official organ of the American Meat Packers' Association, declared that there will be no reduction in meat prices as a result of increased volume of meat importation. And this declaration is repeated almost weekly with every new cargo received. Nor is this at all strange when we reflect that our own packers control the foreign cattle and meat situation, as far as the United States is concerned, as the following item, taken from the Price Current, November 20, 1913, plainly shows:

"Sulzburger & Sons, it is reported, have made arrangements to build a packing house in Brazil and another plant in Uruguay. With the entrance of this company in the South American field, three of the big American packers will be operating there, Swift and Armour already having plants in Argentina."

If the wholesale packers were to quit exporting cattle and beef meats—that is, sending them out of the country—together with the importations from South America, it would certainly help to relieve the situation of scarcity of cattle and meat supply which they tell us exists. But it is certain that my proposal to stop exporting will not be favorably received by them. Personally I would rather sell to the American people than to any other nation on earth. If I would seek foreign markets at all, it would be only to enable me to increase my output and my profits. But if the supply of raw material were curtailed alarmingly my patriotism would suggest that I serve my countrymen first, and the foreign market could go hang.

I am groping to find a remedy, and if the packers will tell me authoritatively just how serious is the present scarcity of cattle situation, if they will tell me how much of an increase in cattle production is necessary before what they consider a normal supply is attained, and if they will assure me that the prices of meats will go down to the prices of two or three decades ago, I'll promise them that I will find a remedy that is a remedy, a remedy that I believe the American people will willingly cooperate to carry to a successful termination.

I anticipate their answer. Nay, I quote their answer, for they seem to have the uncanny faculty of answering questions before they are put, of solving difficulties before they are encountered—their answer has already been given. It is this, that "no matter how much cattle we may raise prices of meats will never be materially lowered."

Prices of cattle have advanced less than an average of 3 cents a pound during the last 15 years, while prices of meats have advanced from 8 to 20 cents a pound. However, if the supply of cattle were to become excessive—so large as to bring down the market price 3 cents a pound—the consumer has already been repeatedly informed that there would be no appreciable reduction in meat prices.

And the reason for this fixity of prices is not far to seek. We are told that it is because the price of corn—grain and cereals—is higher than in former years. But let us not forget that the prices of grains and cereals are, as is pretty generally known, arbitrarily fixed not on the farms but in the Chicago Board of Trade, not by the producers but by nonproducers, practically the same group of men that arbitrarily fixes the price of cattle and the prices of meats. Consequently it is not difficult to understand that no matter how large the supply of cattle and no matter how abundant the crops, the prices of meats will not be lessened much—will remain, even under the most favorable conditions, practically as high as they are now.

On July 9 the morning papers of the country published the governmental crop report for 1914, showing an increase of 13.6 per cent over the grain harvest of 1913. One of the Chicago evening papers of the same date contained statements from several Chicago packers that, notwithstanding this fact, the price of beef meats will be raised. Here

are a few of their frank statements. They are interesting if not consoling:

One says: "The price of meat will undoubtedly rise soon; the 16-cent price to the butcher will be reached if the present supply keeps up. There is an extreme shortage of cattle."

Another declared: "The prices will rise, which is only natural under the present circumstances. Cattle are scarce. * * * The dry summer experienced out West last year is really the chief cause."

Still another said: "The people are eating just as much as they have been, while the supply has diminished considerably. Naturally, when the demand is greater than the supply, the prices are bound to rise."

And so forth.

The packers' pessimism continues undiminished. Well, then, what is the remedy? It is very simple; it entails no hardship on anyone, requiring only a slight personal sacrifice on the part of the average consumer. During recent years protests have been made in various sections of the country against the high cost of living, especially against the ascending prices of meats. These protests generally took the form of abstaining entirely from meats. Such campaigns are short lived, futile, and ineffective. I will counsel no such course. My remedy is simpler. Briefly put, it is this:

Let every family compute how much meat it is consuming at the present time. This ascertained, let it cut down its purchase by one-half, pursuing the course of buying the same quantity of meat as formerly for a meal, but reducing the number of days on which meat is eaten. Thus a family eating meat seven days a week would hereafter eat meat on alternate days, etc.

The remedy is so obvious and pertinent as to require no further elucidation at my hands. It is the only remedy that will effectively lower the price of all kinds of meat. It will force the "gaunt specter of a beef famine" to a precipitate flight. Moreover, the effects will be salutary to the consumer and his purse. But, above all, since we are told that there is an alarming scarcity of cattle, it would within a surprisingly short time give to the country a more than adequate supply of cattle, and consequently considerably lower prices of meats. It is a rational solution for what the packers would have us believe is a desperate situation.

A Holy Cause.

SPEECH

OF

HON. MANUEL L. QUEZON,

OF THE PHILIPPINE ISLANDS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 28, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands and to provide a more autonomous government in those islands.

Mr. QUEZON. Mr. Chairman, I shall not now discuss the merits of the pending bill except perhaps incidentally, and only as such discussion may be required for the proper understanding of what I intend to say. I wish to address myself to some of the remarks just made by the gentleman from Minnesota [Mr. MILLER] in his elaborate and eloquent speech, which I could not fail to admire, however much I might disagree with him.

The gentleman from Minnesota [Mr. MILLER] said that the Filipino people are against this bill, so much so that at a great meeting held in Manila at the instance of friends of Speaker Osmeña, my colleague [Mr. EARNSHAW], and myself, for the purpose of indorsing Mr. EARNSHAW's work and mine as Resident Commissioners, there was almost a riot because the immense majority of the people gathered at that meeting insisted that in the resolution or vote of confidence presented there a provision be included instructing the Resident Commissioners to urge the Congress to set a fixed date at which independence should be granted. To an accompaniment of cheers, says the gentleman from Minnesota, this last provision was attached to and became a part of the resolution as finally adopted by the meeting. My friend from Minnesota read to us some newspaper accounts of that meeting, as well as some comments referring to this bill as affecting or surely to affect the future of the political party to which I am proud to belong. Among these comments I particularly noticed the prediction that the absence from the bill of a fixed date for the granting of independence will prove to be but the death sentence of the Nationalist Party—my party.

Mr. Chairman, I thank my friend from Minnesota [Mr. MILLER] for the courteous expression of his hope that that prediction might not prove true. I want to tell the gentleman, however—and this comes from the very bottom of my heart—that if the enactment of this bill, meaning as it will the authoritative recognition of the inherent right of the Filipino people to be independent and the solemn declaration that they shall be granted that independence, that thereafter the Filipino people shall have the power, as it is their right, to say what must and what must not be done in their country; that the happy end of a foreign oligarchical government in the Philippines shall arrive; that the Filipinos shall no longer be considered the least and the last factor in the counsels of the government of the Philippine Islands, even ignored by those who are but their guests; in other words, that they shall be foreigners no more in their own land. If, I say, the enactment of this bill and its conversion into law, with all and more than all this wealth of significance, shall prove to be the death sentence of the Nationalist Party—much as I love my party, to which I have belonged ever since it was founded; much as I care for the political fortune of my comrades, many of whom are the dearest friends I have; much as I love myself, who would go down into oblivion together with both my party and my comrades—I emphatically say, let that death come when it will. I welcome it. For, over and above my party, over and above my comrades, over and above myself, I love my people, their welfare and their rights. [Applause on the Democratic side.]

Ah, Mr. Chairman, I have already staked too much in this noble task to which I have consecrated my life to permit myself to hesitate as to my course, now that the goal is within sight, whether for partisan or for other selfish considerations. I took the field when little more than a mere boy, suffering hunger, fatigue, and every kind of privation, and exposing myself in many a battle; I have been for six months walled in as a prisoner of war; I have been for a long time a sick man as a result of the miserable life I led in the mountains during those years that I was a soldier. All these hardships and dangers I have gladly gone through that I might see my fatherland the arbiter of its own destinies. And when I failed to accomplish my aim through that means, I have carried on my campaign in this country with tongue and pen; and now, when the great onward step toward the realization of my ambition is to be taken, should I be so cowardly, so faint-hearted, so false to myself as to withdraw for party's sake? No, never!

Mr. Chairman, the work wherein I am engaged, together with the membership of my party, is not a political affair. To the rank and file of my party, to its leaders—and in speaking of these leaders I can not refrain from mentioning by name the foremost of them all, the patriotic, the industrious, the brilliant man to whom more than to anyone else the Nationalist Party owes its success, Speaker Osmeña, of the assembly—to them and to me this work is not a political enterprise, in the common sense of that term. It is a patriotic undertaking, that affects our national honor, our national rights—indeed, our very national life. It is the question of all questions. It is a cause—a great, holy cause. [Applause.]

Mr. Chairman, must we go down to defeat? Must we go out of office? If we must, so as to secure at this time more governmental powers and more liberty for our people than they now enjoy, then we shall willingly go down to defeat, we shall gladly go out of office. Must the party which alone stood by the people through thick and thin, in the hours of trial, of tribulation, of danger, be rent asunder? If it must be so, that we may obtain a solemn promise that the ideal for which that party is fighting—the independence of the Philippines—shall be realized, then let that party be destroyed. After all, when this bill shall have been passed, the Filipino people can well afford to dispense with the services of the Nationalist Party, because while independence will not yet have been granted, its consummation will nevertheless have been assured. It would only be a matter of time and dependent solely upon the Filipino people themselves. After this bill shall have been passed, it would be an easy, perhaps, a profitable, effort to bring about the actual declaration of Philippine independence. Thereafter, men of proven patriotism, who could be induced neither by fear nor cupidity to betray the legacy of our martyrs, will not be needed. Others who in easy and comfortable times respond to the call of their country may then serve the public need as well.

Mr. Chairman, the allurements of public office are not so strong as to be irresistible. Men can live without being listed on a pay roll. In fact, many a time those who have some capacity and some desire to work would be better off both economically and otherwise if engaged in private pursuits, and that is the truth.

The Nationalist Party does not care for power or for offices, as is evidenced by the fact that many of its members would not take, in the beginning of American occupation, positions offered to them by the American Government. The Nationalist Party has entered the political arena for a purpose nobler and higher than that of gaining power and drawing salaries for its members. It is in the political arena because at one time—in days that tried men's souls—there was offered to the world the sad but not unprecedented spectacle of a handful of Filipinos filling the Government positions in the islands who joined our adversaries in the claim that independence was neither wanted by the Filipino people nor should be granted them, because they were incapable of governing them-

selves. Squarely and fearlessly to face this untrue and unjust proposition, the Nationalist Party came into existence. It went before the people with the cause of immediate independence as its standard, so that the Filipino electorate might at the polls choose whether the lives of those who died that their country might live should have been wasted. It sought for its members the elective offices of the Philippine Government so that it might show through them the capacity of the people for self-government. Thus to secure these offices was for that party a necessary means to a noble end. The Filipino people in every popular election spoke their mind and their feeling. Theirs was the ideal of the Nationalist Party. This question decided, the party labored for the realization of that ideal. Its members when in office gave eloquent testimony of the capacity of the Filipino people. In the municipal and provincial governments they proved to be equal to their tasks. In the Philippine Assembly first, and later in the Philippine Commission, they demonstrated by their wisdom, by their devotion to duty, by their unselfishness, that the Filipino people actually are capable of governing themselves; and while this demonstration was thus being made, the party, through its own memorials, through assembly resolutions adopted by the votes of Nationalist members, and through the personal representations of the Nationalist Resident Commissioner, urged the Congress of the United States to grant the Philippine Islands immediate independence.

The Nationalist Party has kept faith with the people; it has done its duty and its best to promote their cause. And it is now discharging that duty and doing its best to promote that cause by indorsing this bill.

Mr. Chairman, I wish I could have been spared the necessity of singling out any one political party in the Philippine Islands upon the floor of this House. I am here, though a Nationalist, as the representative of all the Filipino people. It has been my honor to receive the unanimous vote of the members of the Philippine Assembly regardless of their political affiliations, and in return for that honor I have invariably represented the interests of my people at large, and never, since I have been Resident Commissioner, have I ever done or said anything in this country for the advancement of the interests of my party. The remarks of the gentleman from Minnesota [Mr. MILLER], however, have compelled me to defend my comrades and associates, as it was my obvious duty to do so, because they have been very loyal to their constituency. Sir, without fear of successful contradiction, I say here that the Nationalist Party in the Philippine Islands has been the faithful guardian of the ideals of our people, and the loyal advocate of their rights.

Mr. Chairman, it is true that the meeting alluded to by my friend from Minnesota did take place in Manila, and that thousands of people participated in that meeting. It is also true that the sentiment of the majority in that meeting was very strong against this bill. I have given my word, and I am now redeeming it, that I should inform the Congress as to their desire that a fixed date for independence be set in this bill. But this is all I am ready to do in deference to them. I shall not oppose this bill. I should have preferred the former Jones bill and the Filipino people would have preferred that bill. There was not a single dissenting vote among them when that bill was introduced. I did everything in my power to have that bill reintroduced and enacted. I did more than that—I submitted to some of the powers that be the proposal that Speaker Osmeña, in consultation with the leaders of our party, both in and out the assembly, had in mind as the best measure for Philippine independence. I could do no more. Is it desired that, having failed in that effort, I should, rather than accept this bill, suffer the old order of things to continue in the islands, so that if another President of the United States should be elected and be deemed best to do so he could reappoint a majority of Americans in the Philippine Commission? Is it desired that, rather than accept this bill, I should allow the Philippine Commission to continue in existence, with the exclusive power of governing one portion of the archipelago and with the right to dispose, of its own free will, of the funds raised from the Filipino people for that portion of the country under its exclusive jurisdiction? Is it desired that, unable to get a promise of independence, with a fixed date, I should let the Congress of the United States stand absolutely noncommittal on this most vital question affecting the future of my people? No; I could not do that. I will not do that. I should betray the confidence of my constituency. I should fail in my grave task. I should not discharge an imperative duty. Moreover, I should be a traitor were I to follow such a course; and rather than do any of these things I should tear to pieces my commission; I should resign and go home and with a conscience free of remorse retire to my native village.

Mr. Chairman, were it true that the majority of the Filipino people were against this bill, I, as their representative, could not, and I should not, have advocated this bill. But I am so convinced that its enactment into law is to the interests of my fatherland that sooner than obey a mandate of my constituency to oppose the bill, when my firm conviction is contrary to their wishes, I should have given them the opportunity of sending here another Commissioner. I would not have misrepresented them by favoring what they did not want. I shall never be untrue to them; but neither shall I ever be untrue to myself, happen what may. The fact, however, is that the immense majority of the Filipino people are for this bill. They have taken the sensible and patriotic view that, since the former Jones bill could not be enacted, it would have been the height of folly, it would be a useless, stupid kind of suicide, to defeat this bill. So they have instructed me to support this bill. They have instructed me to do all I can to have it passed. They have instructed me not to spare any effort to secure its speedy enactment. Two hundred and forty-seven municipal councils, four assemblies of municipal presidents, eight provincial boards, seventy mass meetings, and the executive national committee of the Nationalist Party, which is the majority party in the Philippines, have all indorsed this bill, while only the meeting in Manila and two or three municipal councils are against it. In compliance with these instructions, therefore, quite as truly as in accord with my own conviction, I shall support this bill.

Mr. Chairman, the gentleman from Minnesota [Mr. MILLER] said that he believes I have kept faith with my people, but that he knows that the Democratic Party has not kept faith with me. If I may say so myself, I will tell the gentleman that I did keep faith with my people. Since I first came to the United States as a Resident Commissioner, with the mandate that I work for the immediate independence of the Philippine Islands, I have done everything in my power to discharge that duty. With my hand upon my heart I feel that I can lift my head and say I have done my best as God gave me the light to see it. [Applause on the Democratic side.] But while the gentleman's belief about me is true, I am not prepared to admit that what he says he knows about the Democratic Party's not keeping faith with me is also true.

The CHAIRMAN. The time of the gentleman has expired.

Mr. QUEZON. May I have three minutes additional?

Mr. JONES. I yield the gentleman three minutes more.

Mr. QUEZON. Mr. Chairman, I am not a Democrat nor a Republican, nor even a Progressive. The Filipinos take no sides in your partisan differences. My words, therefore, on behalf of the Democratic Party, which, I am sure, the party does not need, are not dictated by a partisan motive. The Democratic Party has kept faith, and is keeping faith, with the Filipino people.

Both the administration at Washington and in the islands, as well as the Congress, are entitled to the good will and the gratitude of the Filipino people. In so far as the administration is concerned, I can say this: President Wilson had not been fully six months in the White House when he appointed as Governor General for the Philippine Islands a man so sympathetic with the ideals of my people and so deeply interested in their advancement and welfare that he is now idolized by them. President Wilson had not been a full seven months in the White House when he announced in an unmistakable way to the Filipino people, in a message delivered to them by his appointee, the new Governor General, his policy as regards the Philippines. In that message the President made the promise that as a first step toward the performance of his policy he would place in the hands of Filipinos by the exercise of his executive power of appointment the control of the upper house of the Philippine Legislature, thus giving the people of the islands all the legislative power vested in their government. Hardly one month had elapsed since that promise was made when President Wilson appointed a majority of Filipinos in the Philippine Commission. If we bear in mind the very serious and delicate questions, both foreign and domestic, that the President had to meet immediately upon his assumption of office, we shall have to admit that he has exceeded what reasonably could have been expected from him under ordinary circumstances.

And it is not the President alone who has thus acted toward the Filipino people so justly and with such a manifest regard for their interests. The men under him, through whom his announced policy is being carried out, are acting toward the Filipino people as does the President. The Secretary of War, Hon. Lindley M. Garrison, in everything he says and does shows that to him the Philippine question is a moral, not a partisan, question, and it is with the highest of motives that he deals with every phase of that question that goes to him for solution.

Gov. Gen. Harrison, the representative of this administration and of the American people as well in the Philippine

Islands, has already done too much to promote our ideals and our welfare to need any comment.

As to the Congress, we have now here, pending before the House and brought forward with a special rule, this bill—a bill that the gentleman from Iowa [Mr. TOWNER], the ranking member of the minority in the Committee on Insular Affairs, denounces as a partisan measure, because it has a preamble which is a copy of the Philippine plank of the Democratic platform. If we remember that this is only the first regular session of the first Congress Democratic in both branches, and if we further remember that there were many important measures that had to be speedily passed, as demanded by the American people, and others still pending that also require prompt attention, the leaders of the Democratic Party in Congress may properly say that they are promptly redeeming the preelection promises of their party. This bill is, indeed, under the circumstances a strenuous effort to comply in a timely way with the Philippine plank of the Democratic platform. And while I am speaking of the Congress, it is my pleasure and my duty to give public testimony of the sincere affection and love that every Filipino—man, woman, and child—has for the chairman of the Committee on Insular Affairs, the gentleman from Virginia, Hon. WILLIAM ATKINSON JONES. Mr. Chairman, the gentleman from Virginia has served on the Committee on Insular Affairs continuously since that committee was organized, and during all that time, first as the ranking minority member of that committee and now as its chairman, he has unflinchingly stood by the rights of the Filipino people and defended their interests both in and out of season. Every municipality and Province of the Philippines records in its archives a resolution of thanks, of love, for Mr. JONES, and Mr. JONES deserves it. I have seen him working hard on his former bill. I have seen him this very year, when he knew that he could not secure the passage of that bill, drafting the present bill, ill as he was, and doing everything he could to urge it to an early consideration. Mr. JONES has indeed endangered his own health to redeem the pledges of his party in the interest of the Filipino people. And I should say, in passing, that the mere fact that he has introduced this bill instead of his former bill, when I know that he has not changed his opinion about the points at issue, is the conclusive proof that this bill is the best measure we can obtain at this time, that it has genuine intrinsic merit, and that we should accept it. And it is really so, for this bill is a long step in the right direction. Needless it is to say that the majority members of the Insular Committee, in particular the distinguished gentleman from Tennessee [Mr. GARRETT], have all actively helped their chairman.

Mr. Chairman, I am not singing the glories of this Democratic administration and of this Democratic Congress for the benefit of Democratic candidates. My words on this occasion shall not be printed in the CONGRESSIONAL RECORD until perhaps a few days prior to your elections. Indeed, I do not believe my words could change, in any event, even a single vote. Neither have I spoken for the purpose of gaining favor with the party in power. I expect nothing, I want nothing for myself, from the administration. I deem it my duty to make these statements because it is to the interest of the Filipino people themselves as much as to that of the Government of the United States that the people of the islands shall not lose their faith in your administration and in your Congress. Mr. Chairman, I know that it is a part of the political game to claim for oneself all the credit and to blame one's opponents for all the evil in the world, and it is but natural that in the midst of an electoral campaign the speakers on each side of this House should throw stones at one another on every occasion that may arise. But, if I may be permitted to advance a suggestion, let me say, Mr. Chairman, that the Philippine bill is not the proper opportunity for making these campaign speeches. Every speaker should bear in mind that there are two main parties to this question—the American Government and people on the one hand, and the Filipino people on the other. What you say about yourselves works. It will be taken seriously there; very seriously, indeed.

The CHAIRMAN. The time of the gentleman from the Philippines has expired.

Mr. QUEZON. I would like one minute more.

Mr. JONES. I yield the gentleman one minute more.

Mr. QUEZON. If you should unguardedly say something about your parties, your administration, and your Congress that would create distrust, lack of confidence, on the part of the Filipino people in your Government and your people, your already difficult problem in the Philippines will be made insoluble. Mr. Chairman, I am earnest in my desire that the membership of this House should not treat the Philippine question as a partisan question, because their words—though, of course, we who are familiar with your politics all know that those words are not meant as they sound—may have a very bad effect in the Philippines. I do not want my people to lose or to slacken their confidence in the United States when there is no reason therefor. No party in the United States has any base design to betray the Filipino people; no party would do it if it could. I have several times crossed this country from one end to the other; I am in contact with the general sentiment of Americans regarding the Filipino people; I have conversed with Americans occupying high places in public life, both Republicans, Democrats, and Progressives, as well as with persons in private life; I have addressed American audiences, large and small, on the subject of the Philippines, and my observation gives me the right to say unreservedly that the feeling of the American people in general toward the Filipinos is one of friendship, of real interest for their aspirations and for their welfare. There is no question in my mind that when Americans say that the United States in dealing with the Filipinos is imbued solely with altruistic purposes or motives, their statements truly describe the situation. Of course, this does not mean that there may not be some Americans here and there who have selfish interests and who are influenced by selfish purposes in connection with the islands. I know some of them by sight and by name; but these are few and the exception to the rule. I have been serving in this House now for four consecutive years, first under a Republican majority and now under Democratic control. I can say without hesitation that the membership of the Congress—Republicans, Democrats, and Progressives alike—are as friendly, as interested, and as altruistic in their feeling and ideas toward the Filipinos as are the American people at large. With me it has been a question of finding out who among you are in the highest sense our friends, not who are our enemies. I am fully convinced that such differences of opinion as exist in Congress regarding the kind of legislation to be passed for the Philippines are due solely to your differences of opinion as to what is best for the Filipinos themselves and not what may be to the interest of Americans in the islands or of the United States. There is, therefore, no cause for any recrimination, and you all know that there is none. You are all our friends, and you are all trying to do your best for us.

It would be a tragedy, and the main losers would be the Filipinos themselves, should they have no faith in this great Nation. Already, as I understand, the argument advanced in favor of a fixed date for the granting of independence is that in that case the Filipino people can rest assured that when that date shall have arrived independence shall be granted.

Mr. Chairman, I want to say to those Filipinos who thus think, and who because of these arguments are not disposed to take this bill which contains no fixed date for independence, that the redemption of the pledge to grant the Philippines independence does not depend on the detail whether there is or there is not any fixed date therefor. The redemption of that promise will depend purely and exclusively upon the good faith of the American people. If the promise is authoritatively made, as it would be should this Congress approve the preamble of this bill, that would settle the issue. The promise will be redeemed. The greatness of this Nation rests upon its scrupulous fulfillment of national obligations as contracted by this Government through its branches constitutionally empowered to assume those obligations. Should the American people be unwilling to redeem a promise made under such circumstances, the fixing of a date would help matters in no respect. Were the Filipino people in position to demand by force the performance by the American people of their promises, I should say that a promise with a fixed date for its completion would perhaps be better than one without it, for we should then know when the day of reckoning would begin. But as we are powerless to enforce the redemption of the promise in one case just as we are in the other, the date of the fulfillment is of no, or of very little, consequence. We have learned through the hardest of lessons that we can gain nothing by force from the people of the United States, and it is well-nigh time that we should know that nothing would more assuredly defeat our hopes for the future than any attempt at the use of violence to secure the recognition of our independence. We are absolutely at the mercy of this powerful Nation, and we can only appeal to the sentiments of justice and fair dealing of the American people if we are ever to reach the goal of our ambition. Mr. Chairman, I wish to take advantage of this opportunity to give in all earnestness a word of advice to my own countrymen. They should have faith in this country, and should demonstrate it by their deeds as well as by their words. [Applause.]

American Registry for Vessels.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, August 3, 1914.

Mr. BAILEY. Mr. Speaker, my only objection to this bill is that it does not go far enough, for, as I understand it, vessels to be admitted to American registry under its provisions are excluded from the coastwise trade.

While we have been making progress under Democratic rule toward the extirpation of monopoly, curbing here or destroying it there, we have left it completely undisturbed in this particular phase of development. For more than a hundred years our coastwise shipping has been afforded an exclusive privilege. It has been fostered by law at the expense of all other industries. It has enjoyed immunities and favors denied to shipping in general and to the common activities of the people.

The policy of protection, as it relates to manufactures, has been pretty well discredited. It no longer has a solid party support behind it, for at bottom the revolt in the Republican Party, in 1912, was based on dissatisfaction with the Payne-Aldrich tariff and on the scandalous favoritism to which Cannonism had committed the party during its long reign. But this same policy, as it relates to coastwise shipping, stands still unchallenged, even the Democratic Party thus far having failed to apply the logic of its high position to this particular interest. For some reason which remains to be explained the coastwise shipping industry has been singled out for favor, vested with a special privilege, clothed with the power to levy upon the commerce it carries all that the traffic will bear. It is shielded absolutely from competition, and we know to what insolent girth it has grown under the stimulus of a favoritism which is at war with every principle of our free institutions.

Americans should have the same right to buy ships in any market and to sail them in any sea that they have to buy any other commodity and to transport it whithersoever they will in the pursuit of honorable gain. American capital desiring to engage in coastwise shipping should not be penalized by being compelled to buy ships in a cornered market, nor should this capital when invested in a foreign-built vessel be denied the right to enter into competition for traffic between our own ports.

But this bill marks a tremendous step in the right direction, and for this reason I shall vote for it gladly, even with enthusiasm, hoping and believing it will be followed by another step which will open our coastwise traffic to the same free competition which we demand in other fields.

Reclamation Projects.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MACDONALD,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, July 22, 1914.

Mr. MACDONALD. Mr. Speaker, the following historical data, furnished by Harry A. Slattery, secretary of the National Conservation Association, I believe will be of some value in this debate:

WATER-POWER POLICY FOR NAVIGABLE STREAMS.

The germ of the Federal control and regulation policy which began in the Forest Service under Gifford Pinchot grew to national importance as a great national question with the preliminary report of the Inland Waterways Commission on February 3, 1908. This commission, which began an epoch in our Nation's economic viewpoint, laid down the conservation principle as applied to our water power in these words:

Locks and certain other works designed to improve navigation commonly produce head and store water in such manner as to develop power available for industrial purposes, while works designed to develop power on navigable and source streams affect the navigation and other uses of river systems, and these uses must necessarily be considered together. Information concerning water power in the several States and sections is incomplete; yet it is known to be a vast and intrinsically permanent asset, which should be utilized for the benefit of the people of the country, in whose interests it should be administered with careful regard for present and prospective conditions. The facts ascertained in certain specific cases furnish a basis for the claim that the value of the power would pay the cost of all engineering and other works required in such cases to control the streams for navigation and other uses. In the light of recent progress in electrical application it is clear that over wide areas the appropriation of water power offers an unequaled opportunity for monopolistic control of industries. Wherever water is now or will hereafter become the chief source of power the monopolization of electricity produced from running streams involves monopoly of power for the transportation of freight and passengers, for manufacturing, and for supplying light, heat, and other domestic, agricultural, and municipal necessities, to such an extent that unless regulated it will entail monopolistic control of the daily life of our people in an unprecedented degree. There is here presented an urgent need for prompt and vigorous action by State and Federal Governments.

In transmitting this report to Congress, President Roosevelt in his special message of February 26, 1908 (S. Doc. No. 325) forcibly brought before the country the great importance of a reversal of our former laissez faire policy relative to our water powers. It was self-evident that such a policy would inevitably lead to monopoly and extortion. The President in his message said:

Among these monopolies there is no other which threatens, or has ever threatened, such intolerable interference with the daily life of the people as the consolidation of companies controlling water power. I call your special attention to the attempt of the power corporations, through bills introduced at the present session, to escape from the possibility of Government regulation in the interests of the people. These bills are intended to enable the corporations to take possession in perpetuity of National Forest lands for the purpose of their business, where as they please, wholly without compensation to the public. Yet the effect granting such privileges, taken together with the rights already acquired under State laws, would be to give away properties of enormous value. Through lack of foresight we have formed the habit of granting, without compensation, extremely valuable rights amounting to monopolies on navigable streams and on the public domain. The purchase at great expense of water rights thus carelessly given away without return has already begun in the East, and before long will be necessary in the West also. No rights involving water power should be granted to any corporations in perpetuity, but only for a length of time sufficient to allow them to conduct their business profitably. A reasonable charge should, of course, be made for valuable rights and privileges which they obtain from the National Government. The values for which this charge is made will ultimately, through the natural growth and orderly development of our population and industries, reach enormous amounts. A fair share of the increase should be safeguarded for the benefit of the people, from whose labor it springs. The proceeds thus secured, after the cost of administration and improvement has been met, should naturally be devoted to the development of our inland waterways.

In confirmation of the policy announced in his message President Roosevelt wrote a letter on March 13, 1908, to the Senate Committee on Commerce in which he put Congress on notice that in the future bills granting water-power franchises to private interests would be vetoed.

THE RAINY RIVER VETO.

Congress, however, despite the public interest aroused throughout the country by the water-power problem, went serenely on its way with the passage of these private water-power bills. It was therefore necessary for the President to veto, on April 13, 1908, House bill 15444, for the construction of a dam across the Rainy River in Minnesota. In the veto message President Roosevelt again forcibly called the attention of Congress and the country to the water-power question in these words:

We are now at the beginning of great development in water power. Its use through electrical transmission is entering more and more largely into every element of the daily life of the people. Already the evils of monopoly are becoming manifest; already the experience of the past shows the necessity of caution in making unrestricted grants of this great power.

The present policy pursued in making these grants is unwise in giving away the property of the people in the flowing waters to individuals or organizations practically unknown, and granting in perpetuity these valuable privileges in advance of the formulation of definite plans as to their use. In some cases the grantees have apparently little or no financial or other ability to utilize the gift, and have sought it merely because it could be had for the asking.

A long and hard fight was made over the President's veto both in the House and Senate. In defense of the veto, in a formidable speech, Minority Leader WILLIAMS, of Mississippi, said:

It is admitted that this power to erect dams in navigable streams can not be exercised by anybody except by an act of Congress to permit any man to put a dam in a navigable stream. These two things follow: Congress should so exercise power in making that grant as, first, to prevent any harm to the navigability of the stream itself; and, secondly, so as to prevent any individual or private corporation from securing through an act of Congress any uncompensated advantage or private profit.

An amendment to the Rainy River bill authorizing the Government to fix a limitation of time and impose a charge was proposed by the War Department.

The Senate Committee on Commerce, after considering the present veto message and the amendment, reported the bill to the Senate rejecting the policy of the President as a "new departure from the policy heretofore pursued in respect to legis-

lation authorizing the construction of such dams." The committee report also contained an elaborate legal argument to show that the Federal Government had no power to impose any charge for the granting of these privileges.

The company seeking this legislation, by an agreement in writing which met the approval of the War Department, subsequently promised to abide by conditions imposed by the Secretary of War, including the time limit and a reasonable charge. It was only because of this compliance with this policy that the bill finally became a law.

The power interests now saw clearly that the public had been aroused upon the water-power question and began a campaign of their own to offset a policy which meant death to their former glorious days of grabbing. They made strenous efforts to convey to the country the general impression that Congress had overturned the President's veto and his announced policy had been knocked into a cocked hat.

The old days of unrestricted grants and free hand to special privilege without any disapproval from any source were gone. The water-power question, from being one of local concern—with simply a grant to a constituent of mine, with no consideration by Congress—had become a national and a burning one. Great corporations had for several years with vision and foresight begun the acquisition of these valuable franchises, and Congress, the guardian of the public interests, perhaps unwittingly and guilelessly—at least in hopeless ignorance—assisted these bold buccaneers to the Nation's mines of "white magic." But while Congress slept the people had been aroused through the announcement of the policy of the conservation of our water powers.

In the Rainy River veto the issue had been joined on the policy of conserving the remaining water powers in the interest of the public. It was evident the policy announced would have strong opposition in and out of Congress. A hard fight was just beginning.

THE JAMES RIVER VETO.

In the second session of the Sixtieth Congress a bill of the old type was again passed authorizing one William H. Standish and associates to construct a dam across the James River in Stone County, Mo. The President on January 15, 1909, promptly vetoed this bill on the ground that it gave "the grantee the full privilege which by its very nature is monopolistic and does not contain the conditions essential to protect the public interests." Accompanying the veto was a carefully prepared legal memorandum in answer to the claim that the power of the Federal Government did not extend to the regulation of the use and development of the waters of navigable streams. With this special message was also transmitted a report of the Commission of Corporations, which for the first time brought to the attention of the country the danger "of a monopoly far more powerful, because in far closer touch with domestic and industrial life, than anything known to our experience." In the report of the commissioner it was pointed out that 13 companies then controlled 33 per cent of the developed horsepower of the country. In this message the President gave this warning:

To give away without condition this, one of the greatest of our resources, would be an act of folly. If we are guilty of it, our children will be forced to pay an annual return upon the capitalization based upon the highest price which "traffic will bear." They will find themselves face to face with powerful interests. * * * Long before that time they may, and very probably will, have become a consolidated interest controlled from the great financial centers, dictating terms upon which the citizen can conduct his business or earn his livelihood and not amenable to the wholesome check of local opinion.

The veto of this bill brought to a close the first chapter in the fight begun to conserve the water powers of the country in the interest of the public and not in the interest of private corporations. The power interests have received their first check. Congress, however, still held to a legal doctrine which was playing into the hands of the power interests. The power interests were therefore hopeful.

THE WATER-POWER POLICY IN THE TAFT ADMINISTRATION.

The power interests hoped for a return of the old free-grant days in the Taft administration. They based their hopes upon the stand of Mr. Taft, whose "judicial mind" as Secretary of War had been legally in sympathy with those in and out of Congress who held the Federal Government under the Constitution had no authority to control or regulate power developed on navigable streams. The hopes of the power interests were soon confirmed. It was not very long before Congress began again to pass these private bills, and the Executive veto this time was not forthcoming. Congress again began grinding out the bills for the power interests and the President's signature made them law. These were days of rejoicing for the power interests. But while all went well for them in Congress and with the Executive, under the title of "conservationists" a body of men were arousing the country to the reversal of the water-power policy.

It was a coincidence that the fight should again swing around the granting of the site on the James River in Missouri, which President Roosevelt had vetoed. Senator STONE'S bill to grant this franchise—Senate bill 74—was the first bill which passed Congress and received the Executive signature, early in the Sixty-second Congress, a return to the old method of unrestricted free grants. Shortly after its passage the dam site covered by the bill was sold by the grantees for a nominal sum to the Ozark Water & Power Co., a New York corporation with many millions of capital, and which has monopolized the water powers of this State.
